The principal exports are cotton, silk and wool-len tissues, motor cars, olive-oil, wine, candided ctron, slenna earths, pastes, coral, largs, boracic acid, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc and copper ores, sulphur mable, fruit, vegetables, fresh and prepared meats, poultry chemical products, woods, roots, &c., for dyeing and tanning, artistic works, &c. The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw jute and manufactured goods, woollens, raw silk, silkworms' eggs and cocoons, machi-nory, iron and steel in hars, plates and rails, hardware, raw hides, horses and cows, fixed oils, sait fish, dye-stuffs, tobacco, earthenware, &c. The manufactures are woollen, cotton, silk, hemp, and linen yarns and tissues, motor cars, rubber tyres and tubes, leathers, straw and felt, hats, furniture chemical products paper felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. Sugar is extracted from beet in large quantities for

Defence.—The Army consists of 30 Infantry Divisions and 2 Divisioni Celeri (Cavalry and Cyclists) organized in 11 Army Corps, but a large number of Umits and Services, e.g., Bersaglieri, Alpini, Tanks, &c., are not included in these formations. During summer months (with two colasses of conscripts with the colours) the strength is about 400,000; in winter months 200,000 (with one class). Age of liability for recall to Military service was raised in 1930 and brings total numbers available in case of war to 4,000,000-4,500,000 men. The National Militia (Black Shirts) are also part of the Land Forces of Italy. Their establishment is 300,000, but only a small percentage are on permanent service, the remainder being in civil employ, ready for duty whenever required. The Militia supplies a Battalions to each Infantry Division in supplies a Battalions to each Infantry Division in war. On May 24, 1915, Italy declared war on Austro-Hungary, and on Aug. 27, 1916, a state of warwas declared to exist with Germany. The cost of the war to Oct. 23, 1918, amounted to 48millards of life (£1,200,000,000). During the War of 1914-2918, over 25 per cent. of the population were mobilised, and 5,350,000 men passed into the Armies of Italy. The Navy includes 5 modern and 2 pre-Dreadnought battleship, 26 orulsers, x airoraft carrier, 1x fiotilla leaders, 60 destroyers, 47 torpedo boats, 48 submarlnes, 12 gunboxts Art torsed boats, 4s submarines, 1s gunboats and despatch vessels, 2 river gunboats, and 46 minesweepers and minelayers. The peace personnet of the Italian Navy is about 45,000 all ranks. Spezia and Pola, the chief naval and military norts of the kingdom, are securely fortified. The Air Force consists of 120 squadrons of aircraft, of which to are employed in the colonies. The official first-line strength on aircraft is 973 machines, with a further roo in reserve. The personnel for room includes 942 officers and 18,632 other ranks, the expenditure for room 20 being 700 million tire, of which 60 million is for Civil Aviation.

EDUCATION.—Primary Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. is maintained by local taxation and State grants. Secondary education is generally State-main-tained, and schools are increasing in number. Several of the Universities are of very ancient

foundation.

COMMUNICATIONS.—On July 31, 1930, there were 10,407 niles of railway open for traffic, 1,022 being electrified and 352 in course of electrification; the post-offices (1929) numbered 11,288, and there were (1929) 40,855 miles of telegraph line. The sea-going commercial marine (1929) consisted of x,396 steamers (3,axa,30a gross tons) and s,692 salling vessels (168,372 tons). In 1920 salling vessels (168,379 tons). In 1920 salling vessels (167,177,450 net tons) entered Italian ports; the clearances were 248,494 (77,185,386 net tons).

ITALIAN COLONIES, &c.

Libia.—The Turkish vilayet of Tripoli and the mutessarifat of Benghazi on the northern coast of Africa, were occupied by Italy in 2012-12, and under the Treaty of Ouchy (Oct. 2012) the sovereignty of the province was transferred to the King of Italy, the sputtual headship over the Muhammadan population being the the Callab. retained by the Caliph. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast-line of nearly z,ree miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutessarifik of Tripoli, Khoms, Jabel-el-Gharb, and Fezzan, and also of Benghari or Cyrenaics, a total area of 820,000 square nules, with a population of the state of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a population of \$20,000 square nules, with a popul lation of about 1,000,000. There are no rivers in the country, and, the rainfall being precarious, a good harvest can only be reckoned on every four or five years Barley, dates, olives, oranges, lemons, and vegetables are produced, and the principal imports are metals, British and other European manufactures, tea, heads, wine and spirits, heades a number of articles for barter spirits, besides a number of another for barrers in Wadai, Bornu, and the Western Sudan, winther caravans proceed from Tripoli. The principal articles of exports are ostrich feathers, ivory, skins, sponges, hides, esparto grass, wool, cattle, and horses. The ancient runs in Cyrenaica, ? e , at Cyrene, Ptolemans, and Apollonia, are interesting to evplorers, as well as those at Leptis Magna, which is close to Khoms, or 70 miles from the city of Tripoli. The population of Benghazi consists of Arabs, Greeks, Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta, and other agricultural produce, is considerable, when a sufficient rainfall causes good harvests. The capital of "Tripolitana" is Tripoli (population 60,000), and of Cyrenaica, Benghazi (population 60,000), lation 35,000).

Governor of Cyrenaica, and Tripolitana.

Marshal Badoglio.

Marshal Badoglio.

Ertiras is a Red Sea colony, and extends from
Ras Kasar, 18° s' N., to Ras Demoirs, 10° 42' N.,
and is bounded on N.W. by the Anglo-Egyptian
Sudan, on S. by Abyssinia, and on S.E. by French
Somaliland. It consists of a triangular portion of
barren and sandy lowland with a coast-line along
the Red Sea of about 700 miles, and covers a total
area of 6 con square miles, with a nonutation of area of 64,000 square inites, with a population of about 510,000, of whom about 3,500 are Europeans. The capital is Asmara, Massowa being the chief port, where there is a good harbour. The prin-cipal products are potash, skins, and salt, of

great value as being the monetary currency of Southern Abyssinia

Governor of Eritrea, H.E. Duke Astuto di Lucchesi.

Somaliland.-Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean, from xx° N. lat. to the Equator, and is bounded on the N. by the Gulf of Aden, on E. by bounded on the N. By the Gull of Aceb, on E. by the Indian Ceean, and on W. by British Somaliland, Abyssinis, and British E. Africa. The total area, including the territory of Jubaland (and the port of Kismayu) transferred from Kenya by Great Britain in 1925, is about 220,000 sq. miles, and the population is estimated at 900,000. Agriculture and camel and cattle realing are the projected industries. The cavital is are the principal industries. The capital is Mogadisho, on the Indian Ocean. Governor of Italian Somaliland, Signor M.

Tientsin.—Italy obtained in 1902 a concession of land fronting the Penho river (China), with a total area of so square miles and a population of about 10,000 natives.

Agean Dependences.—Rhodes, Egeo and the Dodecanese (12 Islands occupied by Italy in 1912 during the war with Turkey, vz.—Stampalia, Scarpanto, Caso, Piscopi, Nisiro, Callinno, Lero, Patine, Cos, Simi, Calchi, and Lipso). The seat of administration is at Rhodes (Rodi) and the total population is about roo.coc.

(Liverpoot, Issaku Okamoto (Manchester), Maj. W. P. Groves (hon.). (Middlesbrough), Alfred William Billiner (Cardyl), E. H. Trimby (hon.). (Glasgoo), A. Scott Younger (hon.). (Dublin), A. M. Weatherill (hon.). ,,

This ancient and extensive Empire consists of four large and many smail islands, said to comprise in all above 4,223, the principal of which are Houshu, Shikoku, Kiū-shū, Hokkaido or Yezo, situate to the north of the main island, from which it is separated by the Tsugarn Straits, and Formosa, called by the Japanese, Taiwan. The Aine, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo, but in diminishing numbers The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Klu-kin) Islands under the name of "Prefecture of Okinawa." The empire, with its dependencies, comprises an area of \$60,783 square miles, with a population (Dec., 1928) of 83,536,971.

The population of the maintain only on Sept rice population of the maintain only on self-ently volcanic, and 18 of the summits are still active; the chief of these, Kuji-san, or Fuji-no-yama, the lofticst and most sacred mountain of Japan, about sixty miles from Tokio, is 12,370 ft. high, and has been dormant since 1709. Japan is also liable to frequent, since 1707. Japan is also liable to frequent, and occasionally disastrons, earthquakes. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive, teeming with every variety of agriculproductive, occasing whenevery variety of agricultural produce. Copper, iron, sulphur, lead, manganese, tin, tungsten, molybdennin, and mony, zinc, agate, cornelian, and rock crystal are found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale while there is a good supply of middling coal. Petroleum is also being produced in quantities, especially in the Province of Echigo Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, and a lacquer-tree, which furnishes the celebrated "lacquer" of Japan. The principal timber trees are the Cryptomeria japonica, Pinus Massoniana, and Zelkowa Keaki; the Paulownia imperialis is largely used for fancy boxes and works of art; the maple is merely for ornament. Chestnut, beech, and elm are comparatively

rare and little used. The tobacco-plant, teashrub, potato, rice, wheat and other cereals are all cultivated; rice is the staple food of the people, about 347,500,000 bushels being consumed annually in Japan proper (home-grown crop 1930, 63,505,430 koku; koku=5 hushels, approximately). Agriculture, upon which the Japanese bestow great care, is their chief occurrence. pation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied, though scented flowers are comparatively few. Fruit is abundant, including the orange, per-simmon and loquat; European fruits, such as apples, strawberries pears, grapes, figs, and peaches are produced, and the American navel orange is extensively grown.

Commerce and Industry.—The chief manufactures are silk and cotton woven goods, cotton yarn (axo cotton spinning mills were in operation in Dec., 1928), matches, paper, glass, cement, chemicals and fertilisers, sugar, brushes, flour, insulated electric wire, woollen houses, noir, institute electric wire, woolich fabrics, rubber goods, soap, lacquer ware, porcelain, earthenware, mats, matting, hemphrads, knitted goods, vegetable oil, crude camplior, camplor oil, straw-plaits, and bronze, while shipbuilding is an important industry in while simpointing is an important inquistry in the yards. The chief imports are raw cotton from India, U.S.A., Egypt, and China; wheat from Canada, Australia and U.S.A.; oil cake from Kwantung Province and China; wool from Austrails; crude rubber from Malays; lumber from U.S.A.; and piece goods, metals, manures, woollens, wool, drugs, rails, locomotives, and machinery from the U.S.A. and Europe. Sugar is largely imported from the Dutch East Indies, Philippine Islands and Formosa; kero-sene oil from U.S.A. and the Dutch Indies; beans, peas, and pulse from China, Kwantung Province, and Korea; and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton fabrics, cotton yarns, tea, refined sugar, kultted goods, matches, coal, camphor, straw-plats, porcelain, earthcuware, marine products, paper, glass and toys.

Communications - There were about 13,560 miles of Government and private railroad (steam and electric) on Dec. 3r, 1989, in addition to 2,200 miles open in Korea, oz miles in Formosa and 30x in Saghalien, while the South Manchurian Railway in China (754 miles) is under Japanese control. The mercantile marme of Japan and her dependencies consisted in 1989 of steamers and motor vessels of 4,215,772 gross tons, in addition to small craft and wooden ships. The total tounage entered and cleared at the chief ports in 1929 was 133,140,249 (25,106 vessels). The three great ports are Kobé, Yokohama and Osaka, the first named having a large transhipment trade, in addition to direct imports and exports. In March, 1927, there were 8,784 post offices dealing with about 4,000,000 postal packets annually, and 166,271 miles of telegraph line carrying 67, 165, 166 messages outwards in the financial year 1926-27.

Defence.-Service in the Army is universal and compulsory between the ages of so and 40. The Army is divided into a first line (Gen-eki), and its reserve (Yob); a second line (Kob), and its reserve (Kokumın), with a third line to make good the wastage of war (Hopu). The peace strength of the first line is 17,956 officers and about 250,000 other ranks. The military Air Force is organized in 8 flying regiments and a balloon corps; the Naval Air service consists of 17 shore-based squadrons, in addition to machines carried by aircraft carriers and other ships, with 4 small sir-ships and a balloon section. The Nawy includes 6 battleships, 4 battle cruisers, 4 (20,000 ton) cruisers and 25 others, 5 aircraft carriers, xog destroyers and 66 submarines. Japan declared war against Germany on Aug. 23, 2914, and captured the German fortress of Tsingtau in November, 1914.

Education is in the lower grades free and compulsory. High schools are State-aided, and prepare for a 3 years' course at the Universities. There are high schools for girls, and the technical and special schools are well attended. There are six State Universities of Tokio (a), Kyoto, Tolioku (at Sendal), Hokkaido and Kyushu (at Fukuoka), and 5 medical universities.

Formosa.-The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace. On the E. coast of the island are the highest known sca g. coast of the island are the highest shown age cliffs in the world, 8,000 feet sheer above the water. Its total area is 73,500 square miles, with 4,470,774 inhabitants (7928). Imports, Yen 204,790,684; exports, Yen 27,893,255, in 1929. The colony has been self-supporting since 1906. producing 36,580,000 bushels of rice in 1930, and it is the principal source of the world's camphor supply. Estimated rev. and exp (1928-29), lenzo, 246,000. Capital, Taihoku; pop. (1928), 219,566.

Saghalin (Karafuto).—The southern half of this island was coded by Russia at the close of the Russo-Japanese war. The ceded territory has a total area of 9,824 sq. miles with a popula-tion (1928) of 240,502. The Japanese Government is encouraging the settlement of agriculturists. and there is a large fishing industry. Estimated revenue and expenditure (1928-29) Yen 27,340,000.

The Kwantung Peninsula, which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,300 sq. miles; population (1930) 905,181. The port of Dairen provides Japan with a mainland port, ice-free all the year round, and the peninsula is fattle. Imports port, 100-1100 and 1010 year of 1010 and 1010 permits aula is fertile. Imports (1999), £28,395,333; exports, £38,503.936. Estimated revenue and expenditure (1908-29), Yen 24,091,717. Capital, Port Arthur (Byojunko); chief port, Dairen;

pop. (1930), 369,767.
The Pescadores (Bokoto) consists of about 63 islands, with a total area of 85 square miles, and a population (1928) of 62,606.

Korea (Cho-sen).—By a treaty of Aug. 23, 1910,

Korea was annexed to Japan and became part of the Japanese Empire.

Korea is situated between 122° and 122° E. long., and between 34° and 42° N. lat., and the coast is fringed with innuncrable islands, of which the largest is Quelpart. Total length, 600 miles from north to south, and greatest breadth 135 miles from east to west, with an area of about 85, 15 square miles. Population estimated at 19,189,699 (Dec. 1988); there are 459,033 (Dec. 1988) Japanese in the country. The soil is fertile, but the arable land is limited by the mountainous nature of the country. The staple agricultural products are rice and other cereals. beans, cotton, tobacco, and hemp; fruit-growing is making progress and seri-culture is thought to have a bright future. Ginseng, a medicinal root much affected by the Chinese, is largely grown under Government supervision at Songdo (Kano), and, being a Government monopoly, forms a rich source of revenue. Gold, copper, coal, iron, and other minerals are distributed throughout the country. There are extensive forests in the externe uoith. The principal exports are rice, beans, silk, fish, fish-oil and manure, iron and iron ore, raw cotton, livestock and hides. Manufactures are as yet in a primitive condition, but are growing, including cotton yarn, silk-reeling, sigar, paper, artificial fertilisers, cement, flour (output at present small in ench case). The greater part of the sea-borne trade is carried in Japanese bottoms. Considertrade is carried in Japanese bottoms. Considerable progress is boing made in the direction of the proper lighting of the coast. The total railway mideage open to traffic is (xsg.) 3,200 miles, Estimated iev. and exp. (1930-31), 1°en 238,850,783. Capital, Scoul (Keijolu); pop. (1928) 321,848.

A Baltic Republic at the eastern and southern shore of the Gulf of Riga, formerly part of the Russian Empire. Latvia was proclaimed an independent state on Nov. 18, 1918. Its frontiers are common with Esthonia, Russia, Poland and Lithuania. The constitution is that of a democratic republic, with universal suffrage and proportional representation. Parliament (Sacina) consists of a single chamber of roo members. The area is about 25,000 sq. miles,

with a population of about s,000,000. The surface of the country is generally flat with marshy areas, interspersed with many lakes. Agriculture and dairy farming are the and Mano, N.W., a distance of about 350 miles,

way, W.C. z. Vice-Consul, Charles E. Jumutz.

Consul, Glasgow, John Dallas.
Consul, Caralif, A. J. Bovey
An indopendent Negro Republic of Western
Africa, occupying that part of the coast of North
Guinea which is botween the rivers Cavalla, S.E.,

with an area of about 43,000 square miles, and extending to the interior to latitude 80 50', a distance of 150 miles from the seaboard. It was founded by the American Colonization Society in reactions of the american colonization society in reactions, and has been recognised since raa7 as an independent State. The population is estimated at 1,500,000 to 2,000,000, including about 12,000 Americo-Liberians. The principal exports are pain-kernels, plassava, paim-oil, coffee, cocoa, ivory, kola nuts and rubber. The chief imports are rice, tobacco, Manchester goods, provisions, spirits, sait, hardware, glass and earthenware and building materials. The executive power is vested in a President elected for four years, assisted by a ministry; there are two honses of Legislature, the Sonate, with so members elected for six years, and the House of Representatives with 22 members elected for four years. There is no regular army, but there is an enlisted frontier force of about 600 men under American and native officers. In 1927 arrangements were made with the Finance Corporation of America for a loan of 5,000,000 dollars, and the issue of the first half is to be completed by the end of 1930. The previous 1932 loan, in which British financial interests preponderated, was paid off from the proceeds of the new loan, which is secured by a first hen on customs revenues and head moneys. Loan Agreement also provides for fluancial supervision by American officials. There are 15 ports of entry, including 4 river ports, along the 350 miles of coast and 22 interior ports. In 1929, 1,029 vessels (2 426,579 net tons) entered and cleared at all ports; of these 272 (825,933 net tons) were British.

The independence of the Lithuanian Republic (Lietuva) was proclaimed at Vilna on Feb z6, ross. The Republic consists of the former Russian Government of Kovno and portions of the Suvalki and Vilna Governments, and is bounded on the N. by Latvia, on the S and E. by Poland, and on the W by Germany and the Baitic Sea, the total area included in the Republic (including Memel Territory) being about 20,000 sq. miles, with an estimated population of a,000,000. Under the Treaty of Versaultes Germany renounced the sovereignty over the town and territory of Memel, and a French High Com-missioner, with a small garrison, governed the Territory in the name of the Allies until Jan. 1923, when the Territory was invaded and occupied by the Lithuanians. The sovereignty of the Territory has been transferred to Lithuania, as set out in the Convention signed at Paris as set out in the Convention signed at Paris (Vlay 8, 1924) and ratified Aug. 1925. The total area administered is 945 Square miles, with a population of about 190,000, of whom about 350,000 inhabit the town of Memel.

The legislature consists of a single chamber Assembly (Serm), elected by universal adult suffrage, the Executive being entrusted to a council of ministers.

The chief industries are agriculture and forestry, the chief products of the Republic being ryc, wheat, barley, oats and potatoes; the exports are flax, liuseed, timber, investock, and dairy produce; the chief imports are textiles, sugar, herrings, and machinery.

Luders de Negri, Bush House, Aldwych,

Mexico occupies the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30'N. lat. and 37° to 117' W. long., and comprising one of the richest and most varied zones in the world. It comprises atates, 3 territories, and the federal district of Mexico, making in all 3x political divisions,

comprehending an area of 768,883 square miles, with a population (1930) of 16,404,030. Mexico is rich in archeological remains, and work is proceeding in every district to remove the earth covering which for many centuries has kept them from view. Near the City of Mexico kept them from view. Near the City of Mexico are a number of pyramids built to a great extent with boulders from the river beds. The Pyramid of the Sun (now called "Tonatiuh") is 75x feet from N. to S., and 735 feet from E. to W., and rises to a height of ar5 feet. The Pyramid of the Moon (now called "Mextil") is 425 feet SI feet, and rises to 150 feet. The staircases vary in construction between terrace and terrace and are found to be intend. Other vices of and are found to be intact. Other places of interest are near Oaxaca, Papantla, Zempoala on the Continent, and Uzmai, Chichen-Itza and other points on the E. side of Yucatan.

The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing Isthmus of Teluantepec, their course being parallel with the west and east coasts. The surface of the interior consists of an elevated plateau between the two ranges, with steep slopes both to the Pacific and Atlantic (Gulf of Mexico). In the west is the Peninsula of California, with a mountainous surface, separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the Suerra Madre, terminates in a transverse series of volcanic peaks, from Colima on the west to Citlaltopete on the east. The low-lying lands of the coasts form the Tierra Caliente, or tropical regions (below 3,000 feet), the higher levels form the Tierra Templada, or temperate region (from 3,000 to 5,000 feet), and the summit of the plateau with its peaks is known as Tierra Fria, or cold region (above 5,000 feet). The only considerable rivers are the Ruo Grande del Norte, considerable rivers are the northern boundary, and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the Rio Grande de Santiago, which runs from Lake Chapala to the Pacific. The remaining streams are governed by the formation of the land, and run in mountain torrents between deep-cut cafions or "barrancas." The largest fresh-water lakes are Chapala (70 miles long and 20 miles wide), and Patzeuaro and Xochimileo. In the north-west are saline lakes amid bare and dry regions. The climate varies according to the altitude. Yellow

cimate varies according to the altitude. Yellow fever sometimes occurs at Merida, Yucatan.

The earliest invaders, or Toltees, gave place in the 13th century to the Azters, who were conquered in the 16th century by Spanish adventurers under Hernan Cortes.*

Spanish rule was established at Tenochtitlan, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary. freedom was asserted by a revolutionary war, 1810-1821. From 1837-1848 the province of Texas gave rise to hostilities with the United States, gave rise to hostilities with the United States, terminating in a three years' war and a cession of the disputed territory to the victorious northern States. In 1830 a Republic was proclaimed, but Iturbide declared himself Emperor in 1831. He was shot in 1834, and a Republic was again established. In 1836 the French troops came to Mexico, and in 1836 an Empire under Ferdinand Maximilian of Austria was declared. In 1836 the downfall of the Empire

[•] The remains of Hernan Cortes have been definitely located in the Temple of Jesus, Mexico City. They are contained in a marble vault, with the funeral garments.

and the death of the Emperor gave rise to the new Republic, which has endured to the present day. The most prominent of modern Presidents is Porfirio Diaz, who ruled (except during 1880-4) from 1876 to May 25, 1911. Since the fall of Diaz internal disturbances, in which eleven Presidents have figured, have continued with varying degrees of intensity, and considerable friction (amounting almost to a state of war) has arisen with the United States. On July 15, 1974, Venustano Carranza assumed control of the executive, but his anti-foreign stiffing and legislation together with the attitude and legislation, together with the seizure of many properties (a few of which belonged to British subjects) led to a refusal of the British Government to grant recognition of his administration. The degree to which Carranza departed from his declaration of neutrality during the Great War undoubtedly influenced the British Government when this policy was adopted. Carranza was overthrown by a further revolution in zgao, and is believed by a further revolution in 1336, and is believed to have been shot by the insurgents. After the fail of Carranza the executive power was assumed by de la Huerta as provisional President, and on Dec. 1 1336, General Obregon, whose coup d'état had caused the downfail of Carranza, became head of the Republic. The determination of the new government to nphold the Carranza constitution of 1917, which has led to confiscatory measures in connection with nationalization of the petroleum of the country, and contains (among other departures from the accepted comity of nations) provisions which restrict the rights of foreigners, caused the British, American, French and Belgian governments to adopt a policy of non-recognition of the Obregon administration. The expropriation, without payment of compensation, of several hundreds of private properties, in pursuance of the Obregon agrarian policy, called forth strong protests from foreign Powers, but all the Powers except Great Britain eventually recognised the Obregon administration. General Obregon was afterwards assassinated relations between Great Britain and Mexico were re-established, and a Special Auglo-Mexican Claims Commission has since met.

Vers Cruz, Tampico, Progreso, and Puerto Mexico are the chief ports on the Atlantic or Gulf of Mexico, and Acapulco, Manzauillo, Mazat-lan, Salina Cruz, and Guaymas on the Pacific There were 16,110 miles of railroad open on Sept. 1, 1926, and 54,670 miles of telegraph. The railroads have in a large measure been built by American and English companies. In Sept. ross the Highway Commission of Mexico had constructed (to Dec. 31, 1928) 247 kilometres of road. finished with asphaltic treatment; of road flushed with asphaltlo treatment; 33s kilometres lacking only bituminous treatment, and 70c kilometres open to traffic, but still in various stages of construction. The city of Mexico is linked with Puebla, Tampico, Vera Cruz, Toluca, and Saltillo by telephone; the line is now extended to the U.S. border and thence is connected to Canada. The city is connected by wireless to U.K. and Europe.

The principal agricultural crops are maize, beans, wheat, barley, Chile-pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of tropical fruit. The magney, or Mexican aloe, yields a favourite beverage, "pulque"; 

trees. The mineral wealth is very great; silver and gold, copper, lead, and quicksilver, fron and coal, are the leading products of the mines, and Mexico produced 50,250,620 barrels of petroleum in 1928. The inineral production is stated at :-

Mineral	Kilograms.

Woolien and cotton spinning and weaving, the making of footwear, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports so per cent. consist of silver and while se mer cent. represents the value of gold, while 35 per cent. represents the value of petroleum and its derivatives, mainly shipped from Tampico. Other important exports are copper, lead and zinc, also sisal hemp (henequen), coffee, cotton, resins, fresh vegetables and dired vegetables.

The monetary system has been placed on a gold basis, with a gold pero = 50 cents U.S. currency or 24'58d.; there is a large amount of silver currency in circulation. In Sept. zoss, the Mexican Government undertook to set aside for the service of the debt the sum of 30,000,000 gold pesos in 1923, rising by 5 million gold pesos annually to 50 million gold pesos in 1927. However, this agreement with the International Commission of Bankers was amended in ross, after the Government had found it in 1925, after the Government had found it mecessary to suspend the service of the debt in June, 1924. The effect of the 1925 agreement was to eliminate the debt of the National Railways of Mexico from the public debt, thereby reducing this from 1,561 million Mexican thereby reducing this rom 1,55 million Mexican gold peaces to 80 millions, as at Dec. 31, 1925. Furthermore, the 1925 agreement provided for the postponement of payment of the 75 million peso (which had not been met in 1924 and 1925) until 1928-1935. Service of the debt was resumed in 1926. In addition to the 850 millions above mentioned, other items which had not been included in the debt agreement of Sept., ross, as amended in ross, amounted to ros millions as at Dec. 31, ross, thus making a grand total of 93 million peso Mexican gold. The total debt, funded and floating and interest, was stated to be \$1.83,105,699 as at Dec. 31, 1988. The language of the country is Spanish.

#### MONACO.

# (Principauté de Monaco.)

Sovereign Prince, Louis Honoré Charles Autoine, born July 12, 1870, acc. June 25, 1922.

Heiress Apparent, Hereditary Princess Charlotte
Louise Juliette (Duchess de Valentinois), born
Sept. 30, 1898; mar. March 19, 1920, Prince
Pierre de Monaco (Count de Polignac), and has
issue a daughter, Princes Antoinette, born
Dec. 28, 1920, and a son, Prince Rainier, born

May 31, 1923. Minister of State, Monsieur Louis Eugène Maurice Piette.

Secretary of State, M. François Roussel.

Consul-General in London, C. Nuthall Foreman, 37 Conduit Street, W. z. Chancellor, Edwin C. Isbell.

A miniature Principality on the Mediterranean, with land frontiers joining France at every point, and consisting of the old town of Monaco, La Condamine, and Monte Carlo, where is the famous casino. The Principality comprises a narrow strip of country about 3 miles long and 1½ miles broad, with (1927) 24,929 inhabitants, and a yearly average of over 1,500,000 viators. The whole available ground is built over, so that there is no cultivation. There is a small harbour (s4 ft. alongside quay), and the import duties are the same as in France. There is a local police force of soo men.

CAPITAL, Monaco.

FLAG: Red and white.

#### MOROCCO.

(Moghreb el aksa "The Farthest West") French Protectorate, and Spanish and Interna-tional Tangier Zone.

Sultan, Sidi Mohamed, born 1909; proclaimed Nov. 20, 1927.

Morocco, the largest of the Barbary States, is situate in the north-west of the African Continent, between  $s_7^0-36^\circ$  N. lat. and  $r^0-1r^0$  40' W. long., with a total area estimated at 218,533 square miles, and a population of about 5,300,000. Morocco is traversed from the Atlantic coast in the south-west to the Algerian frontier in the north-east by five parallel ranges, known generally as the Atlas Mountains. Between the various ranges lie well-watered and fertile plains, the lower slopes of the northern flanks of the mountains being well wooded, while the southern slopes are exposed to the dry winds of the desert and are generally arid and desolate. The most northerly point of Morocco is the peninsula of Ceuta, which is separated from the Continent of Europe by the narrow strait of Gibraltar. The Jebel Musa dominates the promontory, and with the rocky eminence of Gibraltar was known to the ancients eminence of circular was known to the ancients as The Pidura of Hercules, the western gateway of the Mediterranean. Between 3a° N. and 3o° N. is the headland Ghir, which encloses a bay containing the port of Agadir, formerly known as the "Gate of the Sudan."

The climate of Morocco is generally good and healthy, especially on the Atlantic coast, the country being sheltered by the Atlas Mountains from the hot winds of the Sahara. The extremes of temperature in Tangier and Mogador are 90° Fahrenheit in the summer and 37° in the winter, with a ramy season from November to April, but the summer-heat figures at all the intervening ports (Larache, Kenitra-Mehedia, Rabat-Sale, Fedalah, Casablanca, Mazagan, and Saffi) are markedly higher; the last-named port being the hottest. The Mediterranean coast is drier and less temperate, but not unhealthy, while the plains of the interior are intensely hot.

Government.-France is the paramount power and represents the Sultan of Morocco in all foreign relationships, but the country is divided into three zones—the French Zone, the Spanish Zone, and the International Tangier Zone. Spain has had relations with Morocco for many centu-

ries. The northern portion of Morocco, as defined in the Franco-Spanish Treaty of 1915, forms a Spanish "sphere of influence." In this Spanish zone (which extended over the whole of Northern Morocco, with the exception of the International noroco, with the exception of the international cone round Tangler; there were tribal risings in ross, and during the operations to quell these risings the Spanish Expeditionary force mether with serious reverses in the neighbourhood of Melilla. A Civil High Commissioner was appointed in ross over the Spanish zone to inaugurate a policy of pacification. In ross the military forces of Spain met with further reverses, and were withdrawn to a line running west from Rio Martin (on the Mediterranean) to within fifteen miles of the Atlantic Coast, and thence southwards to the French zone, near Alcazar el Kebir. In 1925 the French became embrolled and a considerable force was despatched from Algeria and France to strengthen the French Army in Morocco. In spite of the fact that he was fighting two European powers, however, Abd el Krim, the Riff leader, achieved such success as to be able to threaten the safety of Fez itself in July. But the danger was averted and after an anxious summer the autumn brought relief. The French and Spanish in conference in Madrid realised that their best chance of success lay in close co-operation, and the effect of this new policy soon made itself felt. In September the Spaniards landed at Alhucemas Bay and forced Abd el Krim to evacuate his headquarters at Ajdr. Simultaneevacuate his headquarters at Ajdir. Simultaneously the French by pressure from the south were able to make progress which, if less spectacular, was of no less solid a nature, and by the time the rainy season forced a retirement to winter quarters the tide was definitely on the turn. In the Spring of rad, following an abortive peace conference at Oujda, the French and Spaniards launched their final attack. By May za the Riff had been effectively crossed and Abd el Krim's headquarters at Targuist occupied, and on May z7 the Riff leader surrendered himself to the French. This was the signal for the general break away of the tribes. The French virtually restored peace in their zone and the Spaniards commenced a general movement for enforcing restored peace in their zone and the spaniards commenced a general movement for enforcing submission and disarmament in theirs, their arduous task being practically completed in zeg-. The following year saw the work of pacification consolidated by development of all kinds. Couta (on the Mediterranean coast, opposite Gibraltar), in 35° 54' N. lat and 5° 18' W. long., has been a Spanish possession since the close of the refit century, and forms part of the administhe 16th century, and forms part of the adminis-trative province of Cadiz, and the adjacent Alhucema and Zaffarin islands are Spanish possessions. A special international regime was designed for Tangier before the War by negotiations between the British French and Spanish Governments, but the outbreak of the War prevented this regime from being put into operation. A new Convention instituting the International Zone of Tangier was, however, signed by the three governments at Paris on Dec. 18, 1923, and was brought into force on June 1, 1925. The Convention was modified by a Protocol signed at vention was modified by a Protocol signed at Paris, July 25, 258, by the three Powers and Italy, who thereby adhered to the Convention. Both instruments have been adhered to by Belgium, The Netherlands, Portugal and Sweden, but the United States have not yet (Oct., 1931) squiffed their acceptance, and therefore retain their Capitulatory rights in the International The French Resident-General is M. Lucien Saint.

Zone. The Convention provides for a complete international administration of the zone, except as regards native affairs, which are reserved to

the Shereeflan authority.

the shereefan authority.

Production, Industry, etc.—Among the agricultural products are wheat, bariey, maize, beans, peas, birdseed, linesed, coriander, cumin, fenugreek, esparto, and hemp, and the northern slopes of the Atlas produce many fruits, principally figs, almonds, pomegranates, lemons, olives, oranges, and grapes the latter growing also in the planus. The live stock includes large quantities of horses, cattle, sheep and goats, while the egg industry is of importance. Important deposits of coal, manganese, iron ore, lead and zive, as well as other minerals iron ore, lead and zinc, as well as other minerals in smaller quantities, have been prospected, but their evploitation awaits transport facilities. Gold and silver are also found. Phosphates are exported in increasingly large quantities and constitute a greet source of wealth for the French zone. The trade of Morocco is chiefly with French zone. The trade of Morocco is chiefly with France and Algeria, Great Britain, Italy and Spain, the chief imports being cottons, sugar, motor vehicles, petroleum, building materials, and soft goods, the exports being grain, phoephates, eggs, hides and skins, and wool. The unit of currency in the French protectorate is the Moroccan franc, which is closely allied to the French franc, while in the Tangier zones the franc, the peseta and the Hawani peseta are all current, and in the Spanish zone the two last of these currencies. last of these currencies.

Communications.-The French Protectorate authorities are engaged in the serious developrent of normal gauge railways in their zone, and (Oct. 1931) 1,240 kilometres of normal and 1,300 kilometres of narrow gauge track are in working order. In addition, the completion of the Tangier-Fez full gauge system gives through service between Tangier and the principal towns of the French zone. Telegraphic com-nunication is established by submatine cables from Tangier to Cadiz, Gibraltar, Rio Martin, Mehlla, Tarifa and Oran, also between Casablanca and Brest. There are wireless stations at Tangier, Tetuan (military), Rabat, and Casablanca; inland lines have been built by the French connecting all important places in their zone, as well as to the borders of the Spanish zone, and the latter line is being extended to Tangier. The chief roads in the Tangier and Spanish zones are those linking Tangier and Spanish zones are those linking Tangier to Centa val Tetuan in the North, and to Arzila, Laraiche, and the French zone in the South. The French zone is well equipped with good main and secondary roads. Air Services are maintained between Casablanca and Toulouse (delib) and Casablanca and Toulouse (daily), and Casablanca and Dakar (weekly).

The principal Harbours are Casablanca, and Ceuta (for Tetuan), Tangier, Laraiche, Rabat, Mazagan, Safii, Kenitra, and Mogador.

External Trade. - 1 he imports into the French. Excernat Trace.—The imports into the French.
Zone in 1930 were valued at 2, 200,727,000 francs,
of which 300,000,000 francs represent the value
of imports over the Algerian frontier; exports
from french zone, 1930, fr. 739,000,000. The imports into the Tanguer Zone were valued at
115,509,688 francs and the exports from the zone
at 16,818,497 francs.

CAPITAL of Spanish zone, Tetuan, population 30,000 (principal ports, Laraiche and Rio Martin, for Tetuan).

CAPITAL of International zone, Tangier, population 45,000

population 45,000.

Other towns (with populations exclusive of French army of occupation) are Fcz (107,843) Marrakesh (193,582), Meknes (56,770) Sak (195,821), Casabianca (167,123), Rabat, with Sak (77,821), Mazagan (19,601), Saffi (26,158), and Gudjda (29,280).

Netherlands West Indies :-

Armba-Vice-Consul, Capt. R. Rodger. Willemstad, Curação-Vice-Consul, B. Maduro. Transit, 8 hours.

NETHERLANDS COLONIES.

Netherlands' East Indies —
"Netherlands' India" comprises the islands of Java and Madura, the island of Sumatra, the Rooter Longga Archipelago (which with Karimon, Anambas, Natuna Islands, Tambelan, and part of Sumatra, forms the "Residency of Riouw"), of Sumatra, forms the "Residency of Rionu", the islands of Bangha and Biltiton, part of the island of Borneo, Celebra Island, the Molucoa Islands, Cremate, Halmahera, Buru, Ceram, Bauda, Timor-Laut, Larat, Bachiam, Obi, Kei, Aru, Bahar, Leti and Wetarl, part of New Guinea, part of Timor Island, and the islands of Badi and Lombok, with a total area of 730,000 sq. miles, and a population estimated at 53,000,000. The administrative capital is Batavia (pop. about **2€0,000).** 

Governor-General, Jonkheer Dr. A. C. D. de Graeff, appointed March 26, 1926.

Java and Madura (5x,000 sq. miles, pop. 1930, 40,000,000) furnish sugar, tohacco, tea, coffee, tin, rubber, and other products for exportation.
The "outlying" islands are frequently administered by their own princes, subject to the directions of a Netherlands Resident. There was (1929) a colonial army of 1,293 officers and 37,100 men The colonial revenue for 1931 was estimated at fl. 833.524,000 and the expenditure at fl. 887,202,000. The trade of Netherlands India was valued in 1929 at fl. 1,487,801,000 for exports and at fl 1,166,305,000 for imports. The trade with Great Britain in 1930 was valued at £4,510,420 for imports from, and at £6,586,271 for exports to Great Britain.

BRITISH CHAMBER OF COMMERCE FOR NETHER-LANDS E. INDIES, Batavia, Java.

II. Netherlands' West Indies —
"Netherlands' West Indies" comprise the
manuland colony of Surmam ("Dutch Guiana") in South America, and certain islands in the West Indies known as the "Colony of Curação" ('mraçao, Bonaire, Aruba, part of St. Martin, St. Eustatius, and Saba) with a total area of 400 sq miles, and a population estimated (1929) 400 ad lines, and a population estimated (1929) at 65,750. The administration capital of Surinam is Paramaribo (pop. 50,000); the capital of Curação is Willemstad (pop. 21,000).

NICARAGUA. (República de Nicaragua.)

President (1929-1933), Señor Don José Maria Moncada, assumed office Jan. 1, 1929.

Munister in London, Señor Don Eduardo Perez-Triana, 4 Moorgate, E.C. a. Consul-General in London, General Carlos A. Castro Wassmer, 15 Union Court, E.C. 2.

The largest State of Central America, with a long seaboard on both the Atlantic and Pacific Oceans, situate between 9° 45'—15' N lat. and 3° 40'—87' 38' W. long, containing an area of 51,660 English square inless and a population (1930) of about 750,000, of whom about three-quarters are mixed blood and the rest Indians, including the Mosquitos, who dwell on the Atlantic httoral and were formerly under British

protection. Nicaragua was discovered by Columbus in 150s, and was overrun by the Spaniards under Davila in the first quarter of the 16th century,

forming part of the Spanish Captaincy-General of Guatemala until 1821, when its independence was secured. The present constitution rests on the fundamental law of Nov. 20, 1922 (amended 1933) and is that of a centralised republic. The President is elected by direct suffrage for four years.

The chief products are coffee, bananas, sugar, timber (cedar, mahogany, rosewood, &c.), tobacco, maize, rice, beaus, cocos, hides, gold and silver. Considerable quantities of foodstuffs are imported as well as cottons and other manufactures, principally from the United States, which also take the greater part of the exports There are (1930) 160 miles of railway, 2,842 miles

of telegraph and 3,216 miles of telephone, and a powerful wheleas station was completed at Managua in road. Good roads are very few, and transportation, especially in the rainy season (May-Nov), is attended with great difficulties.

Corinto, on the Pacific coast, is the chief port of the country, handling about 70 per cent. of the total trade. Bluefields is an important port on the Atlantic coast, whence considerable quantities of bananas and timber are shipped to New Orleans. Owing to defective communica-tions the Atlantic littoral is practically isolated from the rest of the Republic and the chief centres of population.

Education is backward, at least 60 per cent. of the population being illiterate.

The official language of the country is Spanish.

Minister in London, His Excellency P. B. Vogt. Offices of Legation, Norway House, 21-24 Cocksput Street, S.W. z.

Counsellor, Daniel Steen. Secretary, Rolf Anderson.

Agricultural Adviser, A. Rirle (Newcastle upon  $T_{ij}ne$ ).

Consul-General, G. Contadi.

Vice-Consul, Stig Thobro Olmer.

Norway, an independent kingdom, founded in 87s (fundamental law of May 17, 1814), was united with Sweden under the same King from Nov. 4, 1814, to June 7, 1905, when the union was dissolved. The Parliament of 150 members is called the "Stortling," which is divided into two sections, chosen by itself to discuss projected Bills, called "Odelsting" and "Lagting." Norway, the western and northern portion of the Scandinavian peningle is about a vec miles in length its expected. sula, is about 1, 100 miles in length, its greatest width about 250 miles. It is divided into 20 piovinces, or fylker, and comprises an area of 124,533 sq. miles with a population (1930) of a,809,564. The coast-line is extensive, deeply indented with numerous flords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tables. lands, separated by deep and narrow valleys The cultivated area is about one-fortieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or uninhabitable mountains.

The chief industries are agriculture and forestry, manufactures, fisheries and shipping Agriculture and forestry give employment to one-third of the population but it has been necessary to import considerable quantities of grain Manufactures are aided by great regrain in animateries are attent by great re-sources of water power, estimated at 10,000,000 kw., of which about 13 per cent. are utilized. The quantity of fish caught by Norwegian fishing vessels is next to that of Gt. Britain, and 60 per cent. of the whales killed are killed by Norwegian Companies. The imports consist chiefly of raw materials for the manufacturing industries and The chief exports are fish, coal and oil fuel. oil, and other products of the fisheries, condensed milk, tinned goods, pulp, paper, iron ore and pyrites, stone, cement, calcium carbide, nitrate of sods, aluminium, ferro-alloys, nitrate of lime, zinc, cyanide, &c.

Defence.-Service in the National Militia is is about 20,000 all ranks. In time of war all males between the ages of 18 and 55 are liable for service. The Navy consists of 4 ironclads, 17 torpedo-hoats, 3 destroyers, 9 aubmarines, and several minelayers. There are 60 seaplanes

and aeroplanes.

33 hours.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by local taxation with State grants in sid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are many special schools and industrial and technical institutes. The University of Oslo was attended in 1930 by 3,476 students.

Communications.—The total length of railways open in 1930 was 2,383 miles, of which 228 miles were private lines. The length of telegraphs and telephones in 1930 was 26,556 miles (State, 23,015) with 588,129 miles of wire (State, 445,462 miles) The mercantile marine, Jan. r., 2931, consisted of 3,953 vessels, of s,294,000 het tons. The gross earnings of the Norwegian mercantile marine in foreign traffic amounted in 1930 to about 412,200,000 kroner.

# SVALBARD

(Spitsbergen and Bear Island.)

By Treaty (Feb 3, 1930) the sovereignty of Norway over the Spitsbergen ("Pointed Mountam") Archipelago was recognised by the Great Powers and other interested nations, and on Aug. 14, 1925, the Archipelago was officially taken over by Norray.

The Svalbard Archipelago hes between 74°-85° N. lat, and between 10°-35° R. long., with an estimated area of 24,205 square miles. The archipelago consists of a main island, known as West pelago consists of a main island, known as West Spitshergen (15,200 sq miles), North East Land, closely adjoining and separated by Hinlopen Strat; the Wiche Islands, separated from the mainland by Olga Strat; Barents and Edge Islands, separated from the mainland by Stort Fjord (or Wybe Jansz Water), Prince Charles Foreland, to the W.; Hope Island, to the S.E., Bear Island (68 square miles) 127 miles to the S. with many similar islands in the neighbourhood of the main group. The principal mineral is oal. In 1290 the coal export was about 125,530 tons. The wintering force in 1230-21, was 437 strong; the archipelago is also visited by hunters for seal, foxes and polar bears. Svalbard 1evenue (1931-32) .....kruner 72,000

do. expenditure (1931-32) ..... ,, 72,000 South Cape is 370 miles from the Norwegian Coast. Ice Flord is 520 miles from Tromso, 650 miles from Murmansk, and 1,300 miles from Aberdeen. Transit from Tromso to Green Harbour (the postal station with a bigh market bour (the postal station, with a high - power Telefunken wireless station) 21/2 to 3 days; from Aberdeen 5 to 6 days.

JAN MAYKN, an island in the Arctic Ocean (70° 49'-71° 9' N. lat. and 7° 53'-9° 5' W. long.) was joined to Norway by law of Feb. 27, 1930.

BOUVET ISLAND, in the Antarctic (54° a6' 8

lat. and 3° a4′ k. I long) was declared a dependency of Norway by law of Feb. 27, 1930.

PETER lat's ISLAND, in the Antarctic (68° 30′S. lat. and 90°35′ W. long.) was declared a dependency of Norway by resolution of Government, May 2, 1931

# PAPAL STATE, The.

# (Stato Città Vaticana.)

Sovereign Pontif (26oth), His Holmess Pope Pus XI. (Achille Ratti), horn at Desio, March 31, 1857, elected Pope (in succession to Benedict XV) Feb 6, 1922.

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the Sovereign Pointiff of the Western Chunch. The Papal States were incorporated with Italy from 1860 to 1870, and the territory of the Papacy was confined to the palaces of the Vatican and the Lateran and the Villa of Castel-Gandolfo. In 1870 the incorporation of the Papal States in Italy left the temporal power of the Pope in suspense until the treaty of Feb. xx, rass, which recognised the full and independent sovereignity of the Holy See in the City of the Vatican. Accompanying the treaty were conventions regulating the condition of religion and of the Catholic Church in Italy and agreeing to pay 750,000,000 live in cash and the income at 5 per cent on x,000,000,000 live state bonds as a final settlement of the claims of the Holy See against Italy for the loss of temporal power.

five years war, which terminated in his defeat and death at the *Battle of Cerro Cord*, March x, x87c. This dogged struggle reduced the country rays. This dogged stringer reduces the columbia to complete prostration, and the population, which was 800,000 in 1837, is alleged to have fallen in 1890 to 250,000, of whom barely 20,000 were men. The present constitution was adopted at the close of the war, and under its provisions the head of the executive is the President, elected by an electoral college for four years and incligible for office for eight consecutive was ineligible for office for eight consecutive years atter the expiration of his term. A Vice-President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members

Paraguay proper consists of a series of planns, intersected by abrupt ranges of hills, some of which reach an altitude of a,coo to 3,coo feet above sea level. The Paraguay and Alto Parani rivers are navngable at all seasons for vessels of 6 to 7 feet draft. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for small craft for 180 miles from Asuncion; but is liable to shrink unduly with drought. Paraguay is a country of grassy plains and dense forest, the soil being marshy in many parts and hable to floods; while the hills are covered for the most part with immense forests. The streams flowpart with immense forests. The streams now-ing into the Alto Paraná descend precipitously into that river. In the angle formed by the Paranà-Paraguay confluence are extensive marshes, one of which, known as "Neembucu," or endless, is drained by Lake Ypon, a large lagoon, south-east of the capital. The Chaco, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Bolivia, forms the subject of a long standing dispute with that country; it is practically a dead level, though a slight and uniform rise westward is now known to exist, and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, ane cnier agricultural products are tobacco, oranges and cassava (manice), maze, 11ce, sugarcane, ground-nuts, and other tropical and subtropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods find a market abroad. Stock-raising, lumbering, cotton and tobacco growing, and the gathering of Yerba (Paraguay tea), are the principal industries. The chief articles of export are hides, timber, yerba mate, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers 2,000 to 3,000 men. A railway, 23 miles in length, which belongs to an Engaps company, connects Paraguay with the Argentine railway system. The journey from Asuncion to Buenos Aires (§85 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk. The language is Spanish.

1928-9 1929-30. £1,189 137£1,261,000 Revenue (Estimate) .... 1,082,451 1,344,583 Expenditure (do.) Foreign Debt :-English Loan . Argentine Loan . . . . Internal Debt (do.) . . . . ..... Floating Debt ... ..... 1923. Exports to U.K..... 91,050

Currency.-The value of the currency is dependent on the Argentine Exchange and is fixed at 4s 6x pesos to the Argentine gold peso, and 18 75 peros to the Argentine paper pero.

plane between Tehran-Khanikin, Tehran-Pahlevi (Enzell), Tehran-Bushire and Tehran-Meshed.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Olifields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats forests in the north and west. Sheep and goats Torests in the norm and west. Since and group are numerous, and good wool is produced. The Persians are mostly Shiah Muhammadans; but there are many adherents of Bahaism (an eclectic form of Deistic religious), and Armenian Christians. The laws and popular educations of the Normand on the present of the Normand. tion are based on the precepts of the Koran, but efforts are being made to approximate the educational system more closely to European models. Persia is divided into provinces, of which the principal are under Governors or Governors-General.

Owing to increasing popular discontent with a corrupt and incompetent administration a corrupt and incompetent administration and an extravegant Court, a nationalist inovement began in Dec, 1905. In Aug., 1906, the Shah, Muzaffer-ud-Dm, admitting the need for reforms, granted a Constitution. He was succeeded in 1907 by his son Muhammed Ali Shah, who was deposed by the National Assembly in 1909, to be succeeded by his son, Sultan Ahmad Shah (under the regency of Nasr-ul-Mulk, until 1914). As a result of the energy of Prime Minister H.H. Reza Khan the authority of the Persian Government was re-established over Persian Government was re-established over almost the whole of Persia by means of a disciplined army of 8,000 cavalry and a2,000 infantry, with 94 guns and see machine guns, and a number of seroplanes and armoured cars. On Oct. 31, 1925, the Shah Ahmed Mirza, who had been absent from the country for some time, need absent from the country for some time, was deposed by the National Assembly which handed over the government to the Prime Minister. On Dec. 13, 1925, the Constituent Assembly elected Reza Khan Pahlavi, Shali of Persia. The Shali took the oath on Dec. 13 and was publicly proclaimed, and was crowned on April 22, 1926.

April 25, 2926.
The revenue is derived from land tax, Crown and salt, while the lands, customs, optim and salt, while the recently enacted law concerning a sugar and tea monopoly is calculated to bring in £600,000 annually (at the present reduced rate of exchange), and this sum is being carmarked for the construction of railways; in rgs8-29 £2,363,000
was so expended. British commercial interests in Persia much exceed those of any other country, the trade between the British Empire (including India) and Persia amounting to 45 per cent. of the total trade of the country

(ross-30), inclusive of oil.

The leading imports into Persia are cotton fabrics, sugar, tea, and motor vehicles; the principal exports were heavy oils, benzine, petrol carpets, opium, fruits, cotton and rice.

Foreign Relations.—By the Anglo-Russian Convention of Aug., 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Peria, while marking out certain regions in S.E. and N.W. Persia respectively in which each had, for geographical and economic reasons, special interests.

In March, 1921, Persia signed a treaty with the Russian Soviet Republic, which provides (inter also) for mutual diplomatic and consular representation, restores to Persia Firtusch and Ashurada, annuls all concessions previously granted to Russians in Persia, hands over the Russian Discount and Loan Bank to the Persian Government, cancels all Persian debts to Russia, denounces all previous Russo-Persian treaties, abolishes the "capitulations" as treaties, abolishes the "capitulations regards Russian subjects in Persia, denounces all treaties made between Russia and

third Powers regarding Persia.

In 1922 the Persian Government engaged a number of American advisers (under Dr. Millspaugh) for the supervision and direction of the country's finances. Considerable strides have been made by the country under this new regime, a balanced budget and a programme for gradual development of the country's resources having been evolved; Dr. Millspaugh's contract has now come to an end; he has left the country and German and Swiss financial experts have replaced the Americans.

In May, rga8, the capitulatory régime came to an end; at the same time a new Tariff Convention was signed, giving Persia Tariff

autonomy.

Peru is a maritime Republic of South
America, situated between 1° 31′ 20″ and
2° 12′ 8. latitude and between 6° 3 and 81′ 12′ W.

The territory between 17° 47′ 8. and 19° 13′ 8. was
occupied by Chile, as the result of the Pacific
War of 1879-188s. In 1939 the Province of
Tacna was returned to Peru, Chile retaining the
Province of Arica. The area of the Remultic is Province of Arica. The area of the Republic is rroynce of Arica. The area of the Republic is estimated at 358,000 square miles (including 6,000 square miles for Tacna), and the population (1921) at 5,550,000. It is bounded on the north by Ecuador and Colombia, as the latter claims a territory in the Amazonian basin; on the east by Brazil and Bolivia, and on the south by Chila and Bolivia. by Chile and Bolivia.

by Francisco Pizarro (born 1478, died 1541), who subjugated the Incas (a tribe of the Quichua Indiana), who had invaded the country some govers earlier, and for nearly three centuries Peru remained under the Spaniah rule. A revolutionary war of x8ar-x8a4 established its independence, declared on July 28, 1831. The onstitution rests upon the fundamental law of Oct. 28, 1856 (amended Nov. 25, 1866), and is that of a democratic Republic under a nowly drawn constitution of 1919. The President is elected for five years by direct vote of the people and under an amendment to the Constitution (1927) may be re-elected indefinitely. The Constitution is again to be amended by the Constitution Assembly, for which elections are held (as also

Assembly, for which electrons are more than (a. 1931). The country is traversed throughout its length by the Andes, running parallel to the Pacific coast, the highest points being Huascaran (as, 95 feet), Huandry (as, 100 feet), Arquipa (or 1941). (22,050 feeb), Iruanum (21,000 feeb), Arriving (or Misti) volcano (20,023 feet), Hualcan (20,000 feet), and Lirima, Tucora, and Sarasara, all over 19,000 feet. There are four distinct regions, the costa, west of the Andes, the serra or western slopes of the Andes, the punas or mountainous wastes below the region of perpetual snow; and the inward slopes (montana) and boundless forests of the Amazonian basin. The coastal area, lying upon and near the Pacific, is not tropical, though close to the equator, being cooled by the Humboldt-Current; its chief products are sugar, cotton, petroleum, wool, hides and skins, and it contains the chief towns and most of the white population. In the barren mountain section are to be found mmerals in great richness and variety which await improved transport facilities before their production can be considerably increased; it is inhabited by Indians in a low state of civilization Upon the eastern slope of the Andes are to be found very large tracts suitable for cultivation and stock raising, at present almost wholly unexplored owing to lack of communication, but efforts have been made in recent years to open up an routes. This part of the country should show most interesting developments in the future. The tropical lowlands lie east of the Andes towards the borders of Brazil, and consist mainly of unexplored or little known country inhabited by Indians in a savage state. minibited by indians in a savage state. There are here deuse jungles, of which the principal commercial product is wild rubber. The mineral production in 1929 was valued as follows:—gold (5,31,516 soles) silver (28,477,521), copper (54,207,522), lead (8.053,24), fine (4,454,088), vanadium (16,538,084) and petroleum (129,329,546 soles). The Lobos and other islands on the Pacific cost provide grane/xxx cost for it was Pacific coast provide guano (151,000 tons in 1929).

The principal imports are coal, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper manufactures, timber and wheat. The chief exports in 1929 were petroleum and derivatives (129,048,826 soles), minerals (95,896,000), cotton

(51,315,280) and sugar (33,377,390 soles).
The total length of the railways open (1926) was about 2,500 miles, of which 2,084 miles are under the control of the Peruvian Corporation. There is also steam navigation on Lake Titicaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. y Chile and Bolivis.

Peru was conquered in the early 15th century less telegraphy stations have been established in many places. There is considerable activity in air services. The Naval Air Force maintains services to Iquitos and other places in the interior. The coast district is served by a national company and by the Chile-U.S.A. route vid Peru. National Air Mails are carried by Peruvian military machines.

Defence.—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 8,000 of all ranks; the Navy includes a cruisers built at Barrow, a destroyer bought from the French Government, and 4 submarines built in U.S.A. There is a military aerodrome at Chorillos (near Lima) and a seaplane station at Ancon.

Language.—Spanish is the official language of the country, but native dialects (of which Quichua is the most important) are spoken by a considerable portion of the Indian population.

Consul, M. Witold Hulanicki.

The Republic of Poland was proclaimed at Warsaw in November, 1918, and under the Treaty of Versailles (June 28, 1919) the assentors to the Covenant of the League of Nations, and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted within the 'imits of the 18th-century "Polish Commonwealth." This State extended in the year 1772 over an area of about 286,000 s(1 miles, and included a population of about 13,000,000. The political boundaries of the Republic are the Baltic Sea, Germany (East Prussia), and Lithuana, in the N.; Czechoslovakia in the S. R. Rumania in the S.E.; Soviet Russia in the E.; and Germany in the W. The present are of the Republic may be estimated at \$50,000 sq. miles, with a population estimated (Jan. x, 1930), at 30,737,448 (of whom x8,660,000 are Poles, and 8,500,000 other nationalities). The predominant religion of the people is Roman certain the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the Catholic, but all faiths enjoy equality, and there are a considerable number of Protestants and a very large number of Jews.

In 1919 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red" armies of Bolshevik Russia appeared (in August, xoso) likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peul of capture. A dramatic counter-attack by the Polish troops at the critical period reversed the nature of the campaign, and Poland was enabled to conclude peace on favourable terms.

Government.—A Republican form of government was adopted by the Constituent Assembly in 1919, the Chief of State exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a Diet (Seym) elected by universal adult (male and female) suffrage, and of a Senate elected by adult (male and female) suffrage of those over 30 years of age. The Constitution voted on March 17, 1921, is very Liberal. Since Marshal Pilsudski's coup d'état of May 12, 1926, amendments have been inserted in the Constitution conferring on the President of the Republic the power of legislation by decree at times when the Diet is not sitting,

decree at times when the Diet is not sitting, subject to subsequent ratification by the Diet. Production.—Mining, cotton, metal work, agriculture, sugar, forestry and stock rating are the principal industries, the chief crops being rye, wheat, cats, barley, potatoes, and sugar-beet; the live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silesia, Congress Poland, and Little Poland (Galicia); zinc, lead ore, mineral and potassuum salts, and in Galicia (Boryslaw) are famous oil fields: the output of crude oil (1922) was 652,000 fields; the output of crude oil (1930) was 663,000 metrictons. The chief manufactures are textiles.

those of minor importance being machinery and metal works, chemicals, and leather. The exports are principally coal, timber, spelter, agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

goods, and machinery.

Defence.—The peace effective of the army is 17,000 officers and 25,000 other ranks. A small navy, for coastal defence, has been organized.

Education.—Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondary education is conducted on a high level, with good attendances, and there are universities at Cracow (founded 1364), Warsaw, Lwow, Puznan, Lublin, and Wilno; Polytechnics at Warsaw and Lwow, and an Academy of Science at Cracow.

Communications.—There are about 10,000 miles of railway and over 25,000 miles of tele-

Communications.—There are about 10,000 miles of railway and over 25,000 miles of telegraph line, with well-developed telephone systems in all the large centres. Over 4,000 miles of navigalle waterways exist on the Vistula, Narew, Bug, Warta, and Phica, of which about 1,100 are navigable by steamers. The free ctropy of Danzig is within the Polish Customs area, free transit for Germany being guaranteed. A purely Polish port is also being constructed at Gdynia, north of Danzig, with a total water area of 470-495 acres, and an estimated maximum handling canacity of 6 to 7 million tons a mum handling capacity of 6 to 7 million tons a year, when complete. During 1930 Gdynn handled nearly 3,200,000 tons of goods. Direct railway communication is being built linking Gdynn with Upper Silesia and Czechoslovakia on the one hand, and with Rumania and the Black Sea on the other. Zlotus

Portugal lies between  $36^\circ$   $58^\prime-4z$   $9^\prime$   $zz^\prime'$  N. lat. and  $6^\circ$   $zz^\prime$   $48^{\prime\prime}-9^\prime$   $zg^\prime$   $45^\prime'$  V long , being 30s miles in length from N. to S , and averaging about  $zz_7$  in breatth from E to W. Continental Portugal contamasa area of 34 500 square miles, with a population in 1920 of 6,032,991, and the Portuguese Colonies a total area of 800,400 square miles, with a population estimated at 10,384,381 The Azores and Madeira are regarded, not as colonies, but as a part of continental Portugal. The chief products are wheat, barley, oats, maize, fax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, vines, and almonds. There are extensive forest of oak, chestnut, sea-pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, rron, slate, and bay-salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, nietal and carthenware goods, tobacco, cigars, &c. The exports consist to the extent of so per cent. of wine, which is the chief industrial product of the country; others are cork, cattle, tin, copper-ore, fruits, oil, where a cork cattle, tin, copper-ore, fruits, oil, sardines, and sait. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The mercantile marine (1920) number ed 62 steam vessels, with a tonnage of sea, say Railways 2,045 miles in extent were open for traffic in 1930, and there were 5,742 miles of telegraph line 111 1028.

Defence.—Service in the militia is universal and compulsory. The peace effective is about 35,000. War strength, about 150,000. The Navy consists of a few small ships of old pattern.

Air Fleet, 84 aeroplanes.

Education is free and nominally compulsory between the ages of 7 and 15, but is not strictly enforced, and about 54 per cent. of the population above 7 years old are illiterate. Secondary education is conducted in State lyceums. There are also military, naval and other special schools. There are Universities at Coimbra, Lisbon and Oporto.

Rumania is a kingdom of South Eastern Europe formerly the classical Dacia and Scuthia Pontica, territory roughly defined by the three great rivers banube, Theiss, and Dinester, whose central point is the line of the Carpathians. The kingdom is divided into the 7 Provinces of The Banat, Transylvania, Bukovina, Bessarabia, Muntenia, Oltenia and Moldavia. Rumania has its origin in the union of the Danublan principalities of Wallachia and Moldania (and the addition thereto of a strip of Southern Bessarabia) under the Treaty of Paris (April, 1856). The principalities remained separate entities under the suzerainty of the Turkish Empire until 1859, when Prince Alexandru Ion Cuza was elected Prince of both Principalities, still under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern-Sigmaringen, in whose successors the crown is now vested. By the Treaty of Bertin (July 13, 1878) a new Principality (consisting of the two above mentioned) was recognised as an independent State, and part of the Debrudja (which had been occupied by the Rumanians) was incorporated in the new Principality. On March 27, 1881, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in 1912-13. Her un-exhausted military power secured for her a re-

adjustment of her south-eastern (Dobrudja) frontier in 1913. In the War of 1914-1918, Rumania fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917), she emerged in triumph at the cessation of hostilities. Her territories were greatly of hostilities. Her territories were greatly increased as a result of the War, and the ante bellum area of the Kingdom (74,46; sq. miles) may now be estimated at 123,000 sq. miles, and the rors population of 7,897.311 has been mereased to nearly 18,000,000. The dominating religion is that of the Greek (Orthodox) Church

GOVERNMENT.—The government is that of a Constitutional Monarchy, the legislative assembly consisting of a Senate (56 members) elected for 4 years, and of a Chamber of Deputies (56 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority parties. The executive is entrusted to a council of ministers.

PRODUCTION.—The soil of Wallachia, Bessarabia, and Moldavia is among the richest in rabia, and Moldavia is among the richest in Europe. The agricultural produce consists of wheat, maize, milet, oats, barley, rye, beans, and peas. The wheat crop for 1931 was estimated at 3,480,000 metric tons. 194 400,000, maize 6,000,000, barley x 530,000, and oats 870,000 metric tons. Vines and fruits are abundant. The fertile plann of Transylvania yields large crops of maize, wheat, rye, oats, flax, and hemp, and the rich lands of Ressarable produce wheat, maize, barles, flax Bessarabia produce wheat, maize, barley, flax, tobacco, water melons, fruit, and grapes. Agri-culture and sheep and cattle raising are the puncipal industries of the kingdom, but the climate of this part of South-Eastern Europe is of the Continental character, with intense winter cold and summer heat, and flerce summer droughts sometimes defeat these principal in-dustries. The forests of the mountainous regions and extensive (17,795,353 acres), and the timber industry is important. The country is rich in minerals, and produces petroleum, sait, coal, hquite, iron, gold, and mica; the workers in the officials are the largest single unit of workers in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country is recommended in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the country in the officials are the largest single unit of workers in any one industry; the production of cride oil was x,885,225 metric tons in x913, 3,569,354 metric tons in x927, 4,300,000 metric tons in x928, 4,827,278 metric tons in x929, and 5,792,321 in x930. Manufactures are in their infancy, and the investor are observed. in 1333. Alamiacones are in their intakey, and the imports are clindify manufactured goods, textiles, machinery and metals; the exports consist principally of wheat, harley, manze, oatapetroleum, timber, cattle, salt and Indes. All large estates have been expropriated and divided among the peasants

DEFENCE. - Service in the Army is universal goo,ooo all lanks passed into the Armies of Rumanna, and of this number over as per cent. were killed or returned as "missing. resurgence of Nov. 1918, an anny of 400,000 was again in the field. This force was the deciding factor in the Rumano-Hungaulan question, and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest There is a small Navy on the Black Sea and on the Danube (30 vessels).

Of the black sea and on the Dander 39 vesses, there being 19,374 schools with 1,612,753 in attendance. Secondary schools are well attended. There are also special schools and Universities at Eucharest, Jassy, Cluj, and

A Government High School of Cernauti. Commerce was opened in 1913.

COMMUNICATIONS.—In 1930 there were 7,364 miles of railway open for traffic in the whole kingdom; railway communication requires great development in order to cope with the problem of carrying the cereal crops to the shipping ports. There are a soo telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels The Black Sea ports are Sulina and Constantza; the latter is liuked with the interior by a railway.

The Union of Soviet Socialist Republics.-The federal system of Russia was adopted by the roth All-Russian Congress of Soviets on Dec. 37 rgsa. The Union covers the greater part of the area of the former Russian Empire, from which the independent states of Finland, Poland, Estonia, Latvia and Lithuania have also been formed. The greater part of the remaining territory forms the Russian Socialist Federal Soviet Republic (R.S.F.S.R.), which is in union with other Soviet Republics in R" sian territory to form the Soviet Union. Prior to the War of 1914-18 the Russian Empire of the Tsar Nicholas II. covered more than 8,500,000 square miles, with a population of about 183,000,000

The constituent Republics of the Union are :-

Republic. Sq miles
I. R.S.F.S.R. (Moscow). 7,638,004
II. Ukraine (Kharkov)... 274,372 8q miles Population. 94,865,174 III. Transcaucasia (Tiflis)
IV. White Russia (Minsk)
V. Turkmenistan 71,899 5,938,200 4,151,076 49,04z (Polterask) VI. Uzbekistan (Taskent) 188,60g 1,100,000 63,640 2,400,000 VII. Tajikistan (Stalinabad) 56,108 2,000,000

8,241,673 138,851,250

The rural population forms 80 per cent. of the whole.

According to the latest census returns (Jan. x 1948) the total population was 146,964,366, of whom 71,010,659 were males and 75,953,707 females. The returns include 29,498 persons

over roo years of age (zz,340 men, 17, z 8 women.)

The Union is governed by the Congress of Soviets of the Union, and during the intervals of sessions the supreme authority is vested in the Central Executive Committee of the Union. which consists of the Council of the Union and the Council of Nationalities. The regular session of the Union Soviet Congress is convened by the Central Executive Committee ("Tsik") of the Union once a year. The Council of the Union consists of 37z members elected by the Soviet Congress of the Union from among the representatives of the several constituent republics, counted in proportion to the population of each republic. The Council of Nationalities is formed of representatives of the constituent and autonomous Soviet Socialist Republics on the basis of g representatives from each, and of representatives of the autonomous Provinces of the R.S.F.S.R. on the basis of x representative from each. The composition of the Council of Nationalities as a whole must be confirmed by the Congress of Soviets of the Union.

(The autonomous Republics of Ajaria and Abkhasia and the autonomous Province of Southern Ossetia scud one representative each to the

Council of Nationalities.)

The regular sessions of the Tsik meet three times a year, and in the intervals the supreme authority is vested in its Presulum, formed by the Tsik of the Union, of 22 members, amongst whom are included the whole of the Union-Council Presidium and the Presidium of the Council of Nationalities.

Chairman of Presidium, Michael Ivanovitch Kalimm (R.S.F.S.R.); G. T. Petrovsky (Ukraine); M. Musabekoff (Transcaucasia); A. G. Tcherviakoff (White Russia), M. Aitakoff (Turkmenustan); M. Khaizula-Khodzhaueff (Uzlekustan); M. Nusrakulla (Tajukistan)

Secretary, A. S. Yenukidsky. Representatives are elected to the Soviet Congress of the Union by indirect voting, each village Somet sending representatives to a l'olost Soriet, the Volosts to Uneza (district) Somets, the Unezas to Government Somets, and the last-named to the Congress of Soviets of the Union. The cities and townships Soviets send representatives to the Congress of Soviets Union on the basis of z deputy for each 25,000 electors, whereas the provincial Societs send z deputy for each 125,000 inhabitants.

The principal executive and administrative organs of the Tsik of the Union are . The Council of People's Commissaties, the Council of Labour and Defence, and the Supreme Court of the Union.

The People's Commissariats of the Union are divided into (z) Federal People's Commissariats for the entire Union, and (z) Joint People's Commissariats of the Union. Federal People's Com-missariats of the Union are: (a) War and Mailne, (a) Foreign Affairs (3) Foreign Trade, (4) Tians-port, (5) Post and Telegraph. The Joint People's Commissariats are (1) Supreme Connect of National Economy, (a) Finance, (3) Internal Trade, (4) Labour, (5) Workers and Peasants Inspection. The Federal Commissariats have their representatives in the constituent republics, who are directly subordinated to them The Joint Commissariats exercise their functions through corresponding Commissariats of the several constituent republics on their territories.

Each of the constituent republics has within its territory its own Congress of Soviets, its Central Executive Committee (Tsik), and Council Central Executive Committee (Tule), and Council of People's Commissaries (Sounarkom), the latter consisting of Chairman, Vice-Chairman, and the following Commissaries: (1) Chairman, Supreme Council of National Economy, (2) Finance, (3) Internal Trade, (4) Labour, (5) Workers' and Peasants' Inspection (all these are subordinate to the People's Commissaries of the Union), (6) Agriculture, (7) Education, (8) Health, (9) Social Welfare, (20) Justice, (21) Internal Affairs (the latter six independent), and also including with an advisory or deciding vote, according to with an advisory or deciding vote, according to the decision of the respective *Tsik*, the repre-sentatives of Federal Commissariats of the Union,

sentatives of rederal commissariate of the Union, i.e., of Foreign Affairs, Foreign Trade, War and Marine, Transport, Post and Telegraph.

The Council of Labour and Defence (Soviet Truda i Oborony, or S.T.O.) is attached and subordinate to the Soviatrom. and in addition to a general direction of commissariats in their

economic and military activity, has the power to ratify statutes of joint-stock companies and

The Supreme Court of the Union is attached to the Central Executive Committee, and has power and jurisdiction (1) to promulgate authoritative opinions on questions concerning general Federal legislation to the constituent republics, (a) to adjudicate controversies between the constituent republics, (3) to try charges against high officials of the Union for offences committed in the discharge of their duties. The Supreme

Court consists of 11 members.

To the Council of People's Commissaries (Somarkom) of the Union is attached a Joint State Political Department, formerly known as the Tcheka, but since rgas as the O.G.P.U. (Objectionna)e Gosudarstvennage Politicheskoje Upravleme), which is designed to combat political and economic counter-revolution, espionage and brigandage. The Charman of the O.G.P.U. is a member of the Council of People's Commis-saries of the Union. The O.G.P.U. is directed by special rules and regulations, which have not been promulgated The control of the legality of the acts of the O G.P.U. is exercised by the Attorney-General of the Union in accordance with a special decree issued by the Tsik.

#### I. SOVIET RUSSIA.

Rossijskava Sotsialisticheskava Federativnava Sovetskaya Respublika — The Russian Socialist Federal Soviet Republic.

President of the Council of People's Commissars, D. E. Sulimov.

Agriculture, M. K. Muralov. Social Welfare, I A. Nagovitzin.

Communal Economy, N. P. Komarov. Communat Economy, N. P. Romarov.

The R.S.F.S.R. consists of 50 Governments and includes 12 Autonomous Republics and 10 Autonomous Provinces. Autonomous Republics: Bashkir, Tartar, Kirghiz, Mountain, Daginestan, Thrkestan, Crinica, Yakut, Karelia, Burlat-Mongol and Volga Germans. Autonomous Provinces Chuvash, Kalmuick, Mari, Voliak, Zyrlan (Komi), Oirad, Kabardan-Balkarsk, Karachai-Circassian, Adighe - Circassian, Tchetchen. (Komi), Olrad. Kabardian Balkarsk, Karachai-Circassian, Adighe - Circassian, Tchetchen. From the economic point of view this vast territory is usually divided into "Black Soil" and "Other Zones," the Black Soil Zone being subdivided into (2) Central Agricultural Region, (a) Middle Voica Region, (a) Lower Volga Region, (a) Northein Cancasus, (5) Sheris, (6) Kirghiz Autonomous Republic, (7) Crimea; while the Other Zones are (2) Western Region, (a) North-Western Region, (3) Central Industrial Itegion, (4) North-Eastern Region, (5) Basins of the rivers Vistka and Vetluga, (6) Ural. Government.—The Soviet Government, although

Government.—The Soviet Government, although composed of representatives indirectly elected by the masses, cannot be called representative, as no provision is made for "the opposition

to the executive power; and although the rural population (e., & per cent. of the population) elects usually a very small number of Communists (= Bolsheviks), nevertheless the Congress of the Soviets consists almost entirely of Communists. As to the cities and towns, only candidates nominated or approved by the Bolsheviks can succeed in these elections. Under Soviet rule individual liberty is considerably less than in the time of Tsardom, while freedom of speech and the liberty of the Press are definitely elemed to the popule.

ress are definitely denied to the people.

Local Government was, and still remains, highly developed The villages in Imperial Russia had their assemblies (skhod) under the presidency of a mayor (starosta); they were grouped into "volosts," the latter into districts (upezd), and these into governments (guberniya). The districts and governments had their elective councils (zenativo) for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading, the population being grouped into voluntary local associations usually corresponding with local government areas. The produce of the soil was disposed of in return for manufactures obtained by the society and distributed at the co-operative shops. Municipalities were also administered by elective councils (dumas) under the presidency of a mayor (golova); but in many cases the local authority of such municipalities and local land councils (zenative) was overshadowed by the superior authority of the bureaucratic governor. After the Revolution, the village and other administrative units set up soviets of workers and peasants, and the provincial councils send representatives to the All-Russia Congress, municipalities having a double representation from their own soviet and from that of the province (or district) in which the numicipalities are situated.

municipalities are situated.

Education — Under the Bolshevik régime popular education is administered by a commissary, in whose charge have been placed all educational histitutions, theatres, museums, and galleries. Beyond this, the State has monopolised the photo-enematographic industry and the publishing of manuals for schools of all types; and as the Soviet Government possesses almost all the printing houses, it practically controls the printing and publishing trades. The education of the workers in the towns is facilitated by lectures and school teaching, but among the peasants in the rural districts even the inadequate provision formerly made has in many places been discontinued. Generally speaking, only children of workers and officials are allowed to attend the primary schools in towns, and only those who belong to the Communist youth or are members of the Communist party may enter secondary school and universities; exceptions to this rule are reduced to the minimum. The average salary of a village schoolmaster does not exceed & a month, which very often is not paid regularly Very often professors of universities and higher schools get a remunera tion of £4 to £7 a month. Only schools established by the Communist party for special party purposes are well supplied in every regard. In 1936 there were stated to be 8,000,000 pupils in the 95,000 elementary and secondary schools, and about s,000,000 in 6,000 advanced and technical schools; while there are two universities in Moscow and ar in other large centres.

Religion.—The Orthodox Church was disestablished by the Bolsheviks and all its property confiscated. All ecclesiastic schools, seminaries and academies have been abolished, and the teaching of religion to persons under 28 years of age forbiddeu. But the law does not forbid the exercise of religion, and churches remain open in virtue of contracts concluded between the congregations and the local authorities. A recent questionnaire addressed to the soldiers of the Red Army shows that 70 per cent. of them believe in a Delty. The clergy live on voluntary donations from their parishioners. On Feb. 24, 1918, the Soviet Government adopted the Gregorian (Western) Calendar.

# Soviet Union Budget, 1931.

Debt.—The outstanding Foreign Debt of Russia on Jun. 1, 1917 (before the Revolution), may be stated as under:—

Debt.

Since the revolution various internal loans have been raised, and these were stated to amount on Oct. x, x929, to a,623,x00,000 gold roubles.

Defence.—The Red Army, recruited by universal military service, consisted in 1928 of about 80,000 all ranks, including 37 cavalry brigades of about 3,000 men, and about 3,000 sallors serving on land. It was reported that the Red Air Fleet was to comprise an organisation of 10,000 aeroplanes for the year 1924; in 1926 it was stated to consist of less than 100 aeroplanes. The Red Navy is beheved to consist of a Dreadnought battleships launched in 1921, dold crusers, 13 destroyers, and 8 submarines.

# The Five Year Plan.

The Soviet Five Year Plan (1938-1933).—The avowed object of the Five Year Plan is to increase the industrial and agricultural production of the U.S.S.R. so that it may overtake and outstrip all other nations. For this purpose the territory is being equipped with factories, railroads, steamships, telegraphs, motor vehicles and tractors. The land is to be made to produce food, houses are to be built, and opportunities for recreation provided, so that the population may have these amenities in greater abundance than the peoples of capitalist nations. The Plan has the political aim of making the U.S.S.R. a far more powerful industrial, economical and political State, and the political aim is being pursued at the expense of the people, the products of the soil being employed primarily in payment of imports required for industrial development, even if starvation is thus imposed on the people. The principal industries undergoing development are asbestos (at Azbest), steel (at Magnetogorsk), manganese (at Ciniaiuri), tractors (at Cheliabinsk, Stallingrad and Kharkoff), wheat (at Baku), and tea and oranges (at Chakwa). The factories are to be provided with electric energy from Dniepostroy, where a dam is under construction, the work being under the superintendence of U.S. engineers. The political

1928-g

development of the Plan appears to be abreast, in most particulars, and in some directions shead, of the time schedule; and in April, 1931, M. Kuibyshev, Chairman of the State Planning Commission, stated that the Five Year Plan would be completed in 1932 (one year ahead of the schedule), and the Government had therefore decided to begin work on a new Five Year Plan for 1933-1936.

Agriculture—The Soviet Board of Statistics publish the following particulars of the har-

10000,				_
		Metric Tons.

The principal railway lines are the main Euro-pean network from Leningrad, through Moscow to Astrakhan and across the Urals via Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic, the Crimea and the Caucasus ; the Trans Siberian Line from Chelyabinsk, on the Ural frontier, to Omsk, and round Lake Baikal to Chita and Stryetensk. From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostok, where a northward extension runs to Khabarovsk, The Amur Railway connects Stryetensk with Khabarovsk, and the Trans-Siberian line thus connects the western and eastern limits of Itossia on Russian territory. The Trans-Caspnan Railway runs from Kinanovodsk (opposite Baku) to Askabad, Mery, Bokhara, Samarkand, Khokand and Andijan, with a seemile branch from Mery to Kushk (near Herat) on the Afgl anistan boider. The Orenburg-Tashkent Line, from the European boundary, across the Kirghic Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the Trans-Caspian system. The Trans-Caucasian Line runs through Georgia, Azetbaijan and Chita the line crosses the Manchurian frontier Trans-Caspian system. The Trans-Caucastan Line runs through Georgia, Azelbaijan and Armenia, from Batum and Poti, on the Black Sea, vid Trilis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Trilis branches run to the Fon. From 1111s Drancins run to Kars, and val Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julia There are in the Soviet Union (1927) 238,600 miles of inland waterways, of which 54,500 are navigable by steam vessels, and nearly 110,000 miles by rafts. The principal seaports are Leningrad and Kronstadt on the Gulf of Finland, Sevastopol and Novorossiysk (Black Sea), Archangel on the White Sea. and Ekaterininsk in the Kola River (Murmansk), Vladivostok (Sea of Japan), and Petropaulovsk in Kamtchatka.

Capital.—On March 14, 1918, the seat of Government was transferred from Petrograd to Muscow, which land a population 12 1920 of about 5,000,000 LENINGRAD (before the war "St. Petersburg," and until the death of Lenin, "Petrourad"), the former Capital, founded by Peter the Groat on the banks of the Neva in 1703, had a population in 1930 of about 1,500,000. Other centres are Sanatov (230,000), Rostov (320,000), Samara (150,000), Nijoi Novgorod (150,000), Voroneza (170,000), Kazan (250,000), Krasnova, formerly Ekaterinodar (150,000), Krasnova, formerly Ekaterinodar (150,000), Tomsk (90,000), Outsk (720,000), Irkutsk (170,000), Tomsk (90,000), Outsk (720,000), Vladivostok (100,000), Archangel had about 40,000

# II.-THE UKRAINE. (Ukraina.)

President, V. J. Tchubar.

On Nov. ar, rory, the greater part of "Little Russia," consisting of the former governments of Chernigov, Kharkov, Kieff, and Poltava (with Eksterinoslav and Kherson in "South Russia," and Podolia and Volkynia in "West Russia," was encouraged by Germany to declare itself independent as the Republic of the Ukraine. The new Republic was invaded by Germany in rory-18, and subsequently overrun we Roublich with South Russia and a military and committee by Bolshevik forces, and a military and economic alliance was concluded between Samet Russia and the Utraviae Socialist Soviet Republic (Dec. 28, 1920). The majority of the inhabitants belong to the Greek Orthodox Church. The chief town and seat of government is Kharkoff (pop. 1083, 312,000), other large centres being Odessa, the great port on the Black Sea (with a populatne great port on the Black Sea (with a population in 1933 of 125,000). Kieff (1901. 1933, 405,000). Ekaterinoslav (pop. 1933, 127,000). Nikolayev (81,000), Poltava (85,000), and Taganrog (100,000). The Ukraine is the great cereal-growing district of Russia, and before the Great War the harvests exceeded 1,000,000,000 poods; during the Civil War the production was reduced to 28g million poods. But in 1932 it had increased 385 million poods, but in 1923 it had increased to 700 millions. In 1923 it had increased to 700 millions. In 1924 there were 122 sugar-beet factories (a00 in 1915) producing 10,000,000 poods (500 millions in 1924-15). The Ukraine also contains large deposits of iron ore Ukraine also contains large deposits of iron ore and coal, and is the principal source of the European supply of quicksilver. Agriculture is the principal industry, and there are large iron and steel works. Before the Great War the exports from the Ukraine (grain, sugar, hides, bristles, quicksilver, and wool) were of the annual value of about £75,000,000, and the imports (manufactured goods and machinery) about £50,000,000.

CAPITAL, Kharkoff. Population (1926), 417,342. Other towns: Dniepropetrosk, 233,000; Kieff, 514,000; Nikolaieff, 105,000; Odussa, 481,000; Poltava, 92,000.

# III.—TRANSCAUCASIA. (Zakavkarskaya F.S.S.R.)

President of the Council of People's Commissars. M. D. Orakhelashvili.

The Transcaucasian Federation consists of three Socialist Soviet Republics:

Republic. Armenia		Population. 1,339,969 2,135,033 2,463,098
	74,105	5,938,100

# Armenia, or Hyastan. (S.S.S.R.A.)

President of the Council, M. S. Hambartsumian. Armenia occupies the uplands between the Iranian plateau and Asia Minor, and is bounded by the Black Sea on the N., by Kurdistan on the S., by Azerbaijan on the E., and by Turkey on the W. Until the outbreak of the Great War it was

the meeting of the former Turkish, Persian, and Russian boundaries is Mount Ararat (17,160 feet), the traditional resting place of "Noah's Ark." In the uplands the climate is severe, ark." In the uplands the climate is severe, but in the valleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, sesame, hemp, flax, and tobacco. Sericulture (silkworm breeding), sheep-breeding, and fruit growing are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen, and nitre abound, while the mountains yield salt (mineral and in solution), gold, silver, copper, lead, fron and valuable marbles; there are also numerous hot and cold mineral springs (similar in nature to those of Vichy); more than half the supply of copper from Russia was derived in 1974 from Soviet Armenia, and the value of carpets manufactured in 1974 exceeded 20,000,000 gold roubles. The Armenian Church is the oldest established Christian church, Christianity having been recognised as the State religion in having been recognised as the State religion in 300, and from the 5th century there is a national language and literature. Cu account of their religion the Armenians have suffered a general persecution by Islam, particularly in the vilayet of Sivas, Bitlis, Diarbekir, Mamuret-el-Aziz, Van, and Erzerum, where massacres have frequently occurred. In 1913-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia, while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918 the Supreme Council of the Allied Powers recognised the independence of the Republic of Armenia. Under the Treaty of Peace with the Allies (May ri, 1920), Turkey recognised the independence of Armenia, with its capital at Erivan. In 1920 a Bolshevik movement set up the Armeman Socialist Soviet Republic, on the lines of the Moscow government.

CAPITAL, Erivan; population, 65,000. Leninkan (formerly Alexandropol) 43,000.

# Georgia, or Sakartvélo. (G.S.S.R.)

President of the Council, M. Ivanoff Kavkazsky. The Socialist Soviet Republic of Georgia includes two autonomous Republics (Abkhasia and Adjaria), and one autonomous Province (Southern Ossetia).

Georgia, a former Kingdom in Transcaucasia with a history of more than 2,000 years as a State, was annexed by Russia in 2802 in violation of the Treaty of Alliance of 1783. At the beginning of 1783 tregained its independence, but in 1783 the country was occupied by Bolshevik forces and became a member of the Transcaucasian Federation. Soviet Georgia is bounded on the N. by the Caucasian Mountains, on the S. by Armenia, on the E. by the Republic of Azer-baijan, and on the W. by the Black Sea. There are 970 miles of railway, the trunk line counceting the Black Sea ports of Potl and Batoum with Baku, on the Caspian. Batoum and Baku are also connected by a petroleum pipe-line. The manganese ore beds are the richest in the world, by the Black Sea Ou lief N., by Aurdistan on the R., and by Turkey on the R., by Azerbaijan on the R., and by Turkey on the W. Until the outbreak of the Great War it was shared between Turkey (25,600 sq. miles). Russia (so.58) sq. miles), and Persia (6,518 sq. miles). The continues the produced in considerable quantities, and at their rise within its boundaries, and at Wine is produced in considerable quantities, and the tobacco plant (chiefly in Abkhasia) yielded 800.000 poods in 1914, a great deal of which was imported by Egypt and produced as local grown. Timber (especially box) is an important industry. Oil wells with unproved quantities of crude oil have been discovered in many places, particularly in the Shirak Steppe. The chief town larly in the Shirak Steppe. The chief town and seat of government is Tiffis, population 300,000; the administrative centre of Abkhasia being Sukhum (63,000), and of Ajaria, Batum (23,000); other large centres being Kutais (50,000) and Poti (zz,oco).

CAPITAL, Tiflis. Population (1925), 400,000.

# Azerbaijan. (A.S.S.R.)

President, M. Musoabekoff.

Azerbaijan, on the south-western shore of the Caspian Sea, extends from the Caucasus in the north to Persia in the south, and from the Caspian on the east to Armenia and Georgia. It includes the provinces of Baku, Hanjin (Elisavetpol), the district of Zakathal and the autonomous territories of Nakhitchevan and Nagorni-Karabach. More than 75 per cent. of the Karabach. More than 75 per cent. of the people are Muhammadaus. The Azerbaijan Socialist Somet Republic entered the Union as a Member of the Transcaucasian Federation on Dec. 31, 1922. The Republic is very rich in Dec. 31, 1922. The Republic is very rich in minerals (naphtha, magnetic ironstone, and manganese), but oil is the principal industry, concentrated in the Baku region, the production being 466,800,000 poods in 1914, and 113,000,000 poods in 1913-3. Hishing is also important, and 15,000,000 poods of caviare were produced in

15,000,000 poons of caviare were produced in 1922. The principal crop is cotton.

The CAPITAL is Baku (pop 460,000) on the shor of the Caspian Sea, the centre of the petroleum industry. Baku is connected by railway with Batum (Georgia) on the Black Sea, via Tilis, and with Moscow, via Rostov. Other towns are Hanjin (60,000), Kuba (14,000) and Nuclia (23,000).

# IV .- WHITE RUSSIA.

# (Byelorussiya.)

President (and Chairman of the Central Executive Committee), A. G. Tchervyakoff.

The independence of White Russia was recognised by Soviet Russia in 1919, and a military and economic alliance was concluded Jan 16, rgar. The independent republic covers the former government of Minsk and parts of Yitebsk and Moghiler. The political neighbours are Lithuania and Poland on the west, and the Ukraine on the south. The capital is Minsk (pop. 121,520), where there is a University founded by the Sout Government; other towns are Gomel (87,000), Bobrunsk (51,000) and Moghileff (50,000).

CAPITAL, Minsk. Population, 131,530.

#### V.-TURKMENISTAN.

(T.S.S.R.)

President, M. Atabaieff.

Turkmenistan is bounded on the west by the Caspian Sea and on the south by Persia, with Afghanistan as a south-eastern neighbour. Eighty-five per cent. of the inhabitants are Muhammadan Turkomans, with about ten per cent. Muhammadan Uzbegs and five per cent Russians of the Orthodox faith. The seat of administration is temporarily at Poltarask (formerly Achabad), other centres being Merv

(22,000) and Karichi (20,000). Krasnovodsk is a port on the Caspian and a railway terminus on the Trans-Caspian line.

CAPITAL, Poltarask (52,000).

# VI.-UZBEKISTAN. (U.F.S.R.)

Sq. miles. Population. Bokhara ...... 50,000 Z,000,000 Khiva ..... 13,640 400,000

President, Achun Babaieff.

Bokhara lies between Turkmenistan (on the W.), the Kara Kalpak territory of the R.S.F.S.R. (on the N.), and is bounded on the south by Afghanistan. The majority of the inhabitants are Muhammadan Uzbegs. The former capital (Old Bokhara) is a station on the Russian Trans-Caspian Railway. The principal products are rice, wheat, fruit, hemp, cotton, silk, and carpets. hyports (mainly to Russia) are agricultural products and silk and cotton manufactures; imports are principally manufactured goods and sugar. The Emirate was abolished in rese and the Emir fied to Afghanistan. A Soviet Republic of Bokhara was established and its independence was recognised by Soviet Russia by treaty of March 4.

Khiva, or Khorezm, formerly the Khanate of Khiva, lies between Bokhara and the Kara Kalpak territory of the R.S.F.S.R., and has a population of whom about half are nomads, and nearly all Muhammadans. The country occupies the fertile delta of the Oxus and is highly pro-

the letthe delta of the UNIS and is highly productive (rice, wheat, cotton, silk, fruit, hemp).

CAPITAL OF UZBEKISTAN, Taskent (population 700,000). Other towns: Samarkand (ro6,000); Andijan (80,000), Bokhara (50,000), Kokand (70,000). Namagan (71,000). Khiva has about 20,000 inhabitants.

# VII.-TAJIKISTAN.

Tadzhik.-The autonomous Soviet State of the Tadzhik lies between Bokhara (on the W.) and the Kara Kirghiz territory of the R.S.F.S.R., with Afghanistan as a southern neighbour. The inhabitants are largely nomads, and almost all are Minamundaus. The estimated area is 56, ro8 square miles, with a population of about 2,000,000

CAPITAL, Stalinabad; population, 6,000. Other centres, Kojent 38,000, and Dura-Tube 22,000.

# SALVADOR.

# (Republica de El Salvador.)

President (1931-1935), Señor Arturo Araujo, assumed office March 1, 1931.

Vice-President, General M. Hernandez Martinez-Foreign Affairs, Education, Justice, Charity and Health, Senor Dr. Don Reyes Arrieta Rossi,

Interior Development, Agriculture and Labour, Senor Dr. Don Jonquin Novoa.

Finance, Industry and Commerce, Senor Dr. Don Francisco Espinosa.

Consul-General, Señor L. A. Gallardo, 7 Union Court, Old Broad Street, E.C. 2.

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles, with a general breadth of 43 miles, and contains an estimated area of 13,176 square miles, with a population estimated in 1331 at 1,437.157. It is divided into 14 departments. In 1332 there

were 6r.ogr births and 24,689 deaths.
Salvador was conquered in 1526 by Pedro de
Alvarado, and formed part of the Spanish viceroyalty of Guatemala until 1821. In 1840 the Republic broke away from the federation of Central American States. The government is Central American States. The government is based upon a written constitution and 1s composed of (a) the Executive power, which is exercised by the President, (b) the Legislative power, which is in the hands of the National Assembly, and (c) the Judicial power, which rests ultimately with the Supreme Court. Elections take place once every four years, and the President is inclugible for a successive term.

The surface of the country is very mountainous, many of the peaks being volcanoes. The highest peak is the Santa Ana volcano (8,300 feet). Much of the interior has an average altitude of z,000 feet The lowlands along the coast are generally hot and unhealthy, but towards the intenor the altitude tempers the severity of the heat and much has been done in recent years to improve sanitary conditions and There is a wet season (winter) from services. May to October, and a dry season (summer) from November to April. Earthquakes have been frequent in the history of Salvador, the most recent being that of roro, when great damage was done to the capital and other towns.

The principal river is the Rio Lempa There is a large volcanic lake (Hopango) a few miles to the east of the capital, while further away and to the west lies the smaller but very picturesque lake of Coatepeque, which appears to have been formed in a vast crater flanked by the present Santa Ana volcano. The eastern spur of this volcano forms the peak of Izalco, which is in an almost constant state of volcanic activity, and (on account of its visibility from the ocean) is known as "The lighthouse of the Pacific."

The chief industry is the cultivation of coffee, which is grown under shade-trees principally on the slopes of the volcanoes; cane sugar is also produced, as well as maize, indigo, rice, balsam, etc. Cotton-growing on a large scale was commenced in spat, but on account of the ravage wrought by insects it was practically abandoned after two seasons. In the lower attitudes towards the east henequen is produced. The principal exports are coffee (sometimes over 90 per cent. of total value), sugar, indigo, balsam, to La Libertad. The first route is the quickest.

henequen, hides and skins. The chief imports are cotton textiles, four, from and steel goods, lard, motor cars, manures, jute sacks, chemical products, cement, petrol, thread. A British railway nearly no miles in length connects Acajutla with the capital and with the important ACRIMON WHO the Capital and with use important coffee centre of Santa Ann. A line from the port of La Union (on the Gulf of Fonseca) to the capital was opened in rear. Two new lines were opened in rear, one from the capital to Santa Lucia, a suburb of Santa Ana, tapping the upper Lempa Valley; the other from the coffee centre of Ahuachapan to Santa Lucia. A new line from Santa Lucia to Zacapa (in Guatemala) was opened to traffic in 1930 and affords continuous railway communication between San Salvador and Guatemala City and Barrios During reacts the re-draining and re-paving of most of the capital were com-pleted, and plans have been made for the macadamizing or paving of several hundred miles of rural roads, many of which are now impassable during the reiny season. There is a good motor road between the port of La Libertad and the capital, while motor transportation is usually possible in the dry season between the capital and Guatemala City, over the International road opened in 1933.
The Pan-American Airways maintain regular sevices connecting San Salvador with the U.S. rud Guatemala Mexico-Brownsville, and vid Havana-Miami, and connecting with Panama via Honduras, Nicaragua, Costa Rica.

There are 202 post-offices and 257 telegraph offices. There is a wireless (receiving and transmitting) station at the capital, and during 1926 a broadcasting station was inaugurated.

The language of the country is Spanish.

#### SAN MARINO.

Regents, Two "Capitani Reggenti."
Consul-General for San Marum in Great Britain,
Grand-Uff. Melvill A. Januesos, 42 Pali Mall, S.W. z.

Vice-Consul, Comm. Giovanni Sovrani

A small Republic in the hills near Runiui. on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Conneil of 60, of whom two are governed by a comment at 60, or whom two as elected as Regents for six months (x April and x October), being thereafter ineligible for office for three years. The area is 38 square nilles, the population 28,952. There is an army of the population 18,958. There is an army of about 1,000. The city of San Marino (pop 2,000) occupies the slope of Mount Titano, and has an impregnable castle, where King Berengar of Lombardy took refuge in 950 A.D., a fine church and theorement palace, and a theatre. The principal industries are wine, cereals, cheese, oil and cattle raising, in addition to the utilization and export of gravel from Mount Titano and production of white and hydraulic lime at Serravalle A Treaty of Extradition was con-cinded between the Governments of Great Britain and the Republic of San Marino on Oct. 16, 2800. An electric railway is under construction from Rimini.

FLAG: Two horizontal bands, white, blue (with coat of arms of the Republic in centre)
British Consul-General, E. R. Secombe (Leg-

horn, Italy).

#### SARRE TERRITORY.

Under the Treaty of Versailles Germany renonuced the government of the Same Basin in favour of the League of Nations, the government being entrusted to a commission of 5 members nominated for one year by the League At the expiration of 15 years from Jan. 10, 1920, the population will be called upon to decide by a plebiscite the government under which they wish to be placed. The total area is about 743 aquare miles, with a population of about 774,546. The chief towns are Sarrebruck (125,020), Neunkirchen (4x,03x) and Saint Inghert (20,8x7).

#### SERBIA. See Yugoslavia.

# SIAM.

(Muang Tal.)
King, Prajadhipok, born Nov. 8, 1893; succeeded

Nov. 26, 1925 Foreign Minister, H.H. Prince Devawongs Varodava.

Envoy Extraordinary & Minister Plenipotentiary London, H.S II Prince Varnvaidya, 23 miles of telegraph lines. Ashburn Place, S. W 7.

The Kingdom of Stain, or Minang Tai (area about 195,000 square nules; population, 1929, 12, 206,207), is a buffer State between British Burma and French Indo-Chma, and its integrity is guaranteed by the British and French Governments by the Auglo-French Agreement of April, The King is an absolute monarch, and appoints his successor. There is an Executive Council of Ministers with an adviser in Foreign affairs (usually of American nationality), and a Financial adviser (hitherto always of British nationality), and, since 1895, a legislative Council of State, consisting of the Munsters, eight royal princes, and over twenty members appointed by the King, who has an absolute power of veto.
There is also a Supreme Council of Five which

advises the King in important matters. number of English, French, Italians, Danes, and Americans are employed in the various State departments. There is an army of nearly 50,000 men, and a few small gunboats; compulsory unlitary service has been introduced. The Kingdom contains many Chinese (largely engaged in trade and industry), besides Sians, Laos, Malays, Burmese, and Cambodians, and over 1,800 Europeans. The principal religion is Buddhism. There are 364 Government schools and 4,724 schools of all kinds, attended by 448,36 children. The Chulalankaran University is organised with faculties of medicine, political science, ongineering, and literature and science. The upper part of Shan is mountainous, the

lower flat. Bangkok is the only much-frequented port. Eighty-five per cent. of samese sea-horne trade, which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. Norwegian shipping holds the lead in tonnage, followed closely by British. The chief products of Siam are rice, teak, and tin (from Lower Siam) The area under rice is being much onlarged by irrigation and by railway extensions, bringing the provinces into closer touch with the capital. There is a large number of rice nulls, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. It 1928 ap irce constituted 69, tin 7 and teak 44 per cent of the exports from the port of Bangkok, while hides and marine products are also exported in considerable quantities. Among imports are treasure, cotton goods and yarn, silk goods, provisions, gunny bags, kcrosene, sugar, opinin, inctals and metal wares, machinery, &c. The general tariff rate is 5 per cent. ad ratherm. Burma imports teak and cattle overland from Sian, and exports thirther cotton and silk goods, &c. Except tin, wolfram, rubies and sapplines, there are no important nuneral products as yet About x.880 miles of tailroads (mostly State-owned) are now open for traffic Railways from Bangkok un to Waniedt (357 miles N.E.), with an extension (13 miles) to The Chang, Chrongman (452 miles N. of Bangkok), Aranya Prades (130 miles E); the southern line to Trang, on the west coast of the Malay Pennisula, was open to traffic in October, 1916, and in July, 1918, was completed to the Kedah border, where function with the Federated Malay States Railway system was effected The E. coast line to Sunger Golok (Kelantan) has also been opened to traffic There is through railway connexion between Bangkok and Penang and Singapore. Good roads are few. There are 4,000

On April x4, x93x, following the results of the Municipal Elections, which showed antimonarchical feeling to be extremely high in all the chief towns of Spain, King Alfonso XIII. left the country, and the Queen and other members of the Royal Family on the following day. A Republic was immediately proclaimed and a Provisional Government, drawn from the various Republican and Socialist parties, was formed. Elections for a Constituent Assembly were held on June 28, and the Assembly met on July 14 and passed a vote of confidence in the Provisional Government, which was later reconstituted as under :-

PROVISIONAL GOVERNMENT President of the Cabinet and Minister of War, Don Manuel Azana Minister of Justice, Don Fernando de los Rios.

quiver, the Ebro, and the Minho. Spain is rich in iron, copper, and lead; its mineral resources are only partially exploited, and principally by foreign capital under foreign direction. In 1930 the coal production was 7,547,094 tons, of which 6,546,824 were pit coal, 380,304 lignite, and 620,066 anthracite. The country is generally fertile, and well adapted to agri-culture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The with hemp and flax of the best quality. The vine is cultivated in every province; in the south-west, Jerez, the well-known sherry and tent wines are made; in the south-east, the Malaga and Alicante. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sigar, coal, tanber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass wool, salt, quick-silver, grapes, &c. Trade was for many years mostly confined to France and Great Britain, but Germany had, before the War, become a serious Germany had, before the War, become a serious competitor, while the United States and Belgium shale an increasing proportion of Spanish trade. Home manufacture is protected by high customs distage.

In 1929 there were 10,197 miles of railway open and 70,000 miles of telegraph line. The sea-going mercantile marine over 50 tons, on Jan. 1, 1931, consisted of 1,276 steamers (1,189,655 tons) and 394 salling vessels (50,277 tons). In 1929, 22,094 vessels of 33,627,024 tons entered and 19,534 vessels of 32,752,245 tons cleared at Spanish ports.

Defence. - In 1931 the Army was reduced from x6 Divisions to 8 Infantry Divisions and x Cavalry Division, having an authorized Peace establishment of 4,94z officers and 98,114 men for the Spanish Peninsular Army and of 1,876

officers and 4,849 men for the Army in Morocco.
The Navy consists of 3 (15,700-ton) battleships and 3 modern cruisers, with x old battleship and 4 old cruisers; there are also 7 torpedo-boat dostroyers, 20 torpedo-boats, 7 submarines, and

az gunboats.

Education, Primaru, is nominally compulsory and mainly free, and is State-aided, the public schools being maintained by local taxation. Many private schools are under clerical control, and supervision is lacking. Secondary High Schools are in each province, but the curriculum is defective. Unrevisities at Barcelona, Gianada, Madrid, Murcia, Oviedo, Salamanca, Santiago, Saragossa, Seville, Valencia, and Valladolul.

Madrid, 1,150 miles; transit, 45 to 50 hours.

The Balearic Isles, Ceuta, Melilla and the Canary Islands, are integral parts of Spanish

The BALKARIC ISLES are an archipelago of is islands in the Mediterranean, the largest being Majorca, Minorca, Iviza, and Formentara; the total area is 1,935 square miles, with a population (1923) of 324,962. The archipelago forms a province of Spain, the capital being Palma in Middle

CRUTA, which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast, opposite Gibialtar. The total area is 5 miles, with a population of 35,219.

MELILIA is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. Melilla has been in Spanish possession since 1492 and is an integral part of Spanish territory. The population is

The CANARY ISLANDS are an archipelago in the Atlantic, off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 3,807 square miles, with a population of 473,497 The Canary Islands form a Province of Spain, the capital being Santa Cruz in the island of Teneriffe.

# Spanish Colonies.

The Spanish Colonics consist of certain settlements in, and islands round the coast of, Africa, with a total area of close on 82,400 square miles, and a population exceeding 275,000.

FERNANDO PO (Fernando Póo) lies in the Bight of Binfra in 3° 12° N. lat. and 8° 48° E long, about so miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, xo,800 feet), with forests of oil pain, elony, mahogany, and oak, and sugar-cane, cotton, and indigo. Cocoa, coffee, sugar, tobacco, cottoni, and mingo. Cocoa, corree, sugar, folacco, vanilla, and kola nut are cultivated, and large quantities of cocoa and other products are exported. With its dependencies it has an area of about 800 square miles, and a population estimated at a4,000. The capital is Basile, and the largest town Port Clarence (x,500 inhabitants). Dependencies are:— Annobon Island (Anno Bom), in the Gulf of Guinea, in ro 24' S. lat. and 5' 35' E. long.; population 1,391.

Corisco Islands, consisting of Corisco, Elobey Grando, and Elobey Chico, lie in Corisco Bay, and export chony, logwood, and other forest produce. Total population o6,072.

BIO DE ORO AND ADRAR (Capital, Villa Cisucros) is a possession on the north-west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between aro so'-a6° N. lat., and extending eastwards to about 13° W long. The territory is part of the waterless

Salara, with a sparse population of wandering Muhammadan Arabs; population season Muhammadan Arabs; population season Mum (or Spanish Gunsen) is a coastal settlement of West Africa between Cameroon and Fieuch Congo (r° N.—s° 22° N. lat.), extending about rag miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Mum, Benito, and Campa rivers, and at Bata on the coast.

SPANISH MODOCCO — Spain exercises a protectorate over a part of Northern Morocco (see "Morocco"), and on the Moroccan seaboud are certain Spanish presidios, formerly used as convict settlements.

Alhucemas is a settlement on the bay of that name, and includes six islands; population 322.

Peñon de la Gomera (or Peñon de Velez) is a fortified rocky islet about 40 miles west of Allincemas Bay; population 398

Spanish Southern Morocco .- Ifni, on the Atlantic coast of Morocco, about xoo miles south of Agadit, affords access to the interior of southwest Morocco, but has no great trade at present.

The Chaffarinas (of Zaffarines) are a group of three islands near the Algerian frontier, about s miles north of Cape del Agua; population 318

#### THE SHEZ CAWAL

The Sucz Canal - The Compagnic Universelle du Canal Maritime de Suez (x Rue d'Astorg Paris VIII) is an Egyptian company, authorised in 1856, and confirmed in 1866, with a capital of 200,00,000 frames in 400,000 shares of 500 frames each. The British Government acquired from the Khedive in 1875 a total of 176,602 shares (cost £4,000,000, value March 31, 1931, £42,653,929) Since 1924 each 500 frame share has been divided into two 250 franc shares.

The Suez Canal was opened in 1869. The total length of the canal is nor miles, with a minimum width of 45 metres (147 ft 8 m), the maximum draught of water allowed for vessels using the canal is 10.06 metres (33 feet). average time for the transit through the canal is 14 hours 34 minutes By a convention, signed on Oct. 29, 1888, the canal was exempted from blockade, and vessels of all natious, whether armed or not, are to be allowed to pass through it in peace or war. The management of the canal is entrusted to a council of 32 administrators, of whom zo are British (three representing H.M. Government and seven the shipowning interest).

British Commercial Directors, The Earl of THE COMMERCIAL DIRECTORS, THE EARL Of A Incheape, P.C., G.C.S.I., G.C.M.G., K.C.I.F. M. (Vice-President of the Company); Sir A'nn V.G. Anderson, K.B.E.; Sir John Cadman, G.C.M.G.; Rt. Hon. Sir R. S. Horne, G.H.K., K.C., M.P.; T. Harrison Hughes; Sir E. Wyldbore-Smith; Sir Thomas Royden, Rt. C. H.

Representing H.B.M. Govt., Sir Ian Malcolm, K.O.M.G.; Sir J. T. Davies, K.O.B., C.V.O.; The Earl of Cromer, G.C.I.E., G.C.V.O.

The following table shows the number and tonnage of vessels which have passed through the Suez Canal since reso, with the percentage of British vessels :-

Year	No of Vessels	Net Tons.	British Tonnage
1920 1921 1922 1923 1924 1925	4,009 3,975 4,345 4,621 5,122 5,337 4,980	17,574,657 18,118,999 20,743,245 22,730,162 25,109,882 26,761,935 26,060,377	% 61.7.6a.9 64.5 6a.8 59.7 59.9

Sweden comprises the eastern half of the Scandinavian pennsula, and compract the capital and 24 governments, "Lan," with an capital and 24 governments, "Lan," with an area of 173,147 square miles, and a population, Dec. 31, 1930, of 6,141,571, nearly all Protestant This area includes the great lakes of Vanern, Vattern, Mishren, and Hjalmaren. Nearly 40 per cent of the population are devoted to agriculture, about 295,000 being owners and 80,000 tenants of the land they cultivate. The country may be distinged in other persons of the land they cultivate. divided into three separate districts, the northern, forest; central, mining and agricultural; the southern, agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are outs, wheat, rye, barley, potatocs, roots and grasses forests are very extensive, covering over one-half of the surface of the country, and cou-sisting chiefly of pine, birch, fir; these are of great importance, supplying timber, pitch, and tar, and the chief fuel of the country, in addition to sulphite and mechanical wood pulp for the paper-making industry. The mineral pro-ducts are extremely rich: iron of excellent quality; lead, zinc, sulphur, manganese, arsenic.

granite, porphyry, and marble. There is a railroad opening up the rich iron-ore districts of Lapland, and inneral trains run from Geilivare and Kiruna to Lulea on the Gulf of Botlinia and to Narvik on the Atlantic; coal is being worked in Scama (Skane). The chief imports are coffee, tobacco, and other ordinary colonial produce, corn, coal, machinery, motor cars, mineral oils, cloth, cotton, wool, manures, skins, non, copper, and yarn. The clief articles of export are timber, wood pulp, paper, machinery, iron ore, matches, butter, pork, and stone. In 1930 the exports of wood pulp and paper were

a 335,000 tons.
Radiroads zo,447 miles in length (of which 4, zz7
act the property of the State) were open on
Jan. z, r93z; and 46,902 miles of telegraph
wires (inclusive of z9,95z radiroad telegraph wires). 133 control stations, and 1,050 railroad and 1,600 other telegraph stations. There were at the other telegraph stations. same date 618,119 wiles of telephone wires.

Defence —Service in the Army is universal

and compulsory, about 24,500 being trained annually; war strength about 40,000. The Nary consists of 63 fluthing vess is (350 gins), xx being ironclads, with submannes, and some training ships, &c

Education,-(1) Primary Compulsory and free Illiteracy rare, Maintained by local taxation, with State grants, Attendance good (i.) Secondary Well-developed, solicols immercus and officient (ii) Special schools make a feature of technics, commerce, and navigation. The Helvetia of the Romans, a Federal Republic of Central Europe, situated between 45° 50′—47° 45′ N. lat. and 5° 58′—10° 30′ E. long. It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1874, and comprises a total area of 15,952 square miles, with a population of 4,056,400 in 1930, who are divided between Roman Catholics, 4x per cent., and Protestants, 57 per cent., Jews numbering 21,000, and others 43,000. The population is formed by three nationalities, distinct by their language, as German 72 per cent., French

sz per cent., Italian 6 per cent., and Romausch (Grisons), z½ per cent. It is the most mountainous country in Europe, having the Alps, covered with pereunial snow and glaciers, rising from 9,000 to 15,323 feet in height, not only along its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced, and nearly all English fruits and vegetables are grown. The forests cover about one-fifth of the whole surface. The chief industries comprise the manufacture of silks, artificial silks and silk ribbons, wool, cotton and cotton ribbons, linen, embroideries, strawplait, machines, paper, chemicals, chocolate, condensed milk, dyestuffs, and tobacco; while the metallurgical, electrical and pharmaceutical industries are also extensive; clocks and watches have long been the staple products of Geneva and Neuchâtel. In 1930 there were 3,650 miles of railway in operation, 350 miles of relegraph line (17,000 miles of circuit), 20,500 miles of telegraph line (19,000 miles of circuit), and 4,012

The legislative power is vested in a Pallament, consisting of two Chambers, a National Council of 187 members, and a Council of States of 44 members; both Chambers united are called the Federal Assembly, and the members of the National Council are elected for four years, an election taking place in October. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President lass a salary of 35,000 francs; the Vice-President and other members of the Federal Council are elected for four years; each year the Federal Assembly elects from this council the President and the Vice-President; they are elected for one year, the five other members for four years. Not more than one of the same canton may be elected member of the Federal

Council.

Defence. Militia. Active Army, 12 yrs.; initial trg., 65-90 days. Subsequently 11 days per aim.; then Landwehr, 8 yrs.; i trg., 12 tys. for dismid. branches only: then [Landsturm to age 48]. War Strength, Militia, 140,600; Landsturm, 57,000;

Education.—Control by cautonal and communal authorities. No central organ. Illiteracy rare in Protestant cantons. (1) Primary. Kree and nominally compulsory, but attendance is not strictly enforced in the essentially Roman Catholic cautons. School age varies. (ii.) Secondary: Age 12-15 for boys. Schools numerous and well-attended, and there are many private institutions. (iii.) Special schools make a feature of commercial and technical instruction. (iv.) Universities: Bale, Berne, Fribourg, Geneva, Lausanne, Zurich, and Neuchâtel.

## SYRIA AND LEBANON.

Syria.—British forces, together with small French and Arab detachments, drove the Turks out of Syria and Lebanon in 1918, and occupied those districts and the district of Cilicia By decision of the Supreme Council of the Allies the districts in question were entrusted to France. to be administered under a mandate (Cilicia was

restored to Turkey by the Freuch in x22).
The Emir Feisal (son of the ex-King of the Hedjaz and, since 1921, King of Iraq) had from the outset assumed the administration of the districts of Aleppo, Hama and Homs, which had been assigned as Independent Arab districts under an assigned as interpreted from May, 1916, between Fiance and Great Britain (the Sykes-Picot Agreement), and it was intended to allow the Emil to remain under French guidance, but on March 8, 1920, the "Syrian Congress" at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria. The action of the Syrian Congress did not receive the sanction of the Alhed Powers, and General Gouraud occupied Damascus, Aleppo, Hama and Homs. The Emir Feisal left the country, and afterwards became King of Iraq  $(q,v_*)$ . The French Mandatory Zone was of Iraq (q.v.). The French Mandatory Zone was first divided into the four autonomous states of Great Lebanon, Damascus, Aleppo and the Alaouites (the region round Latakia), each

having a French adviser responsible to the High Commissioner at Beyrout. The latter three States were later grouped together to form the Syrian Fe leration with a nominated Council. The Federation has now been abolished. Damascus and Aleppo have been amalga-mated into a single State, and the State of the Alacuttes (now known as the Government of Latakia) is again independent. The Jebel Druze forms a small independent State. The form of government differs in each of the actual States, but the guiding principle in each is French control.

Syria is a geographical term for part of the former l'unkish territones in Asia Minor, and nts Northern limits have recently been marked out by a Commission. The Northern boundary between Syria and Asiatic Turkey was defined in between Syria and Asiatic Turkey was defined in the agreement between France and Turkey, and is roughly as follows:—From a point immediately S. of Payas (on the Gulf of Alexandretta) to Heldan Ekbes (the railway station and environs remaining in Syria), thence S.E. to the railway station of Tchoban Bey, leaving the districts of Marsova to Syria and of Karnaba and Killis to Turkey; thence along the Baghdad Railway to Nussebin and along the old highway to Jizireh ibn-Omar on the Tigris (the districts of Nussebin and Jizirchthe Tigris (the districts of Nussebin and Jizirch-ibn-Omar remaining in Turkish territory, with the roadway between these two places). The E. boundary (not yet finally delimitated) separates Syria from Mesopotamia along a line running roughly N.E. from the E. side of Jebel Druze to a point x5 miles S.E. of Jezirch Ibn Omar (80 miles E of Mardin); the S. boundary (which has been only partially delimitated) follows a line from Ras cl Nakoura on the coast, N. of Akka, and running S.E. by E to the Heilpaz railway line S. of Nasib. with a profection northwards to include of Nasib, with a projection northwards to include the head waters of the Jordan, the Hule Lake and the Lake of Therras being included in Palestine. Within these limits the estimated Palestine. Within these limits the estimated area is about 60,000 sq. miles, with a population of about 3,000,000, of whom the greater number are Orthodox Muhammadans, with a number of Shintes and Druses. The products of Syria are wheat, tobacco, fruit, wine, silk, liquorice, copper and brass goods; there is little cultivation without urgation, the inland districts being cut off from the moisture-laden winds by a mountain barrier running parallel with the coast The mineral wealth is believed to be unimportant, but there is a certain amount of bitumen. The principal Syram towns are Damascus (est pep 300,000), Aleppo (250,000), Homs (70,000), and Hama (60,000) Damascus contains the Mosque of the Ominayedes and the tomb of Saladin, and in the southwestern quarter is "The Gate of God," through which the pilgrinage to Mecca used to pass, while the "street called Constants" (Asts is as) runs E. to W. to be unimportant, but there is a certain amount used to pass, Straight" (Act Straight" (Acts ix, 21) runs E. to W. through the city. Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay and also native-made silk and cotton stuffs, Baulbet (Heliopolis), on the western slopes of the Anti-Lebanon range (25 miles N.N.W. of Damascus), are ruins of 1st to 3rd century Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world (60 × 17 × 14 feet), weighing

s, see tons. The railway system consists of a line from Beyrout to Damascus (narrow gauge), with a connexion at Rayak for Homs, Hama and Aleppo (standard gauge). The line from Tripoli to Aleppo, vid Homs, was reopened in rear. A narrowgauge transway runs from Berrut to Mameltein along the coast. From Damascus there is railway communication with Palestine and with Transjordan, and the Syria railways link up with the Baghdad railway at Aleppo. Road communications between Beyrout and Baghdad, vid Damascus, have been developed by the opening up of the desert motor routes. Baghdad is now within a4 hours of Damasons by car, and a weekly air service has been opened for mails and passengers.

In the autumn of 2925, following a revolt of the Jebel Druze in the Hauran, noting took place in Damascus on Oct. 18, and the city was bombarded by French artillery, when part of the Azm palace and parts of the "tereet called Straight" were destroyed by shell-fire or hurned. Straight were destroyed by when the disturbances in Syria, the High Commissioner (Gen. Sarrail) was recalled by the French cabinet. A long period of disorder followed, but in Sept. sor, public security was practically normal. In June, 1930, the French High Commissioner promulgated a new republican constitution for the State of Syria.

Beirut is the residence of the French High Commissioner and the capital of the Lebanese Republic. Damascus was the Federal capital, and has become that of the new State of Syria. Latakia is the capital of the Government of that name, formerly known as the State of the

Algouites.

The Lebanese Republic (the former Turkish provinces of Lebanon and Beirut), declared a State by the High Commissioner, under the title of Etat du Grand Liban, in 1920, extends along the Mediterranean littoral from the Palestine frontier to Naire el Kebr (15 miles N. of Tripol) and is bounded on E. by the Great Central Deprise on, known as the Bekan, in which flow the rivers Orontes and Litani. Its total length is about zao miles, and its width varies from 30 to 35 m i es The estimated area of the Lebanese Republic is about 4,300 square unles, with an estimated population of 579,778. The products of the soil are clives, wheat, grapes, oranges and mulberry Great efforts are being made to develop the district as a summer resort. The capital is Beirnt (pop. 150,000), which is the chief scaport and commercial centre, and the seat of the French mandate. Tripoll is the next important town and seaport. Minor ports are Junien. Tyre and Sidon. The national flag is the French tricolour with a Cedar of Lebanon on the white band.

President of the National Assembly, 'Kazim Pasa

Tana Turkish Ambassador in London, His Excellency Ferit Bey, 69 Portland Place, W. z. Counsellor, Nurettin Ferruh Bey

zet Secretary, Muzaffer Kanni Bey. 3rd Secretary, Cemil Vafi Bey. Archoist, Ali Riza Bey. Consul in London, Durru Mazhar Bey, 28 Mecklemburgh Square, W.C.1.

Vice-Consul, Saffet Bey. Chancellor, Abdullahat Bey.

The Turks belong to the Turanian Race, which comprises the Manchus and Mongols of North China, the Finns, and the Turks of Central Asia. Their numbers probably exceed Central Asia. 50,000,000, with the same language, religion and enlure, but the actual Tunkish State occupies only a small part of the arca inhabited by the Turkish Race, the remainder being in Soviet Russia, China, Afghanistan and Persia Under the Seljuks (Turkish rulers in Anatolia) the conquest of Asia Minor was completed in the 11th century. The Seljuks were succeeded, early in the 14th century, by the Osmanli dynasty, which remainded in power until the Great War.

During the 15th, 16th and 17th centuries the Ottoman Empire was one of the strongest Powers in the world, extending from the Caspian Sea to the Adriatic and Hungary, and from the Indian Ocean to Morocco and the Sudan. It comprised Asia Minor, half of present-day Russia, the Ukraine, the Crimea, the Balkan States and the whole of Arabia The Biack Sea, the Mediterranean, the Red Sca and the Aegean were dominated by Turkish ships, and the Ottoman dominions included not only the Byzantine Empire, but the greater part of the whole Roman Empire.

For two centuries preceding the Great War disintegration had reduced the power and extent of the Turkish Empire, and during the Great War its boundaries were further restricted, Iraq, Syria and Arabia passing into other hands under the Treaty of Sevres. Attempts to wrest further territory were defeated by Gazi Mustafa Kemal, who won a decisive lattle at Ation, the results of which were confirmed at the Lausanne Conference.

Turkey now extends over an area of 410,000 sq. miles, from Adrianople to the Caucasus and Persia, and from the Black Sea to the Mediter-

ranean, Syria and Irad.

Government,-Sultan Muhammad VI., the last of the Osmanli rulers, fled from Constantinople to Malta on Nov. 20, 1922, and the Sultanate was al-olished by the National Assembly. On Oct. 29, 1923,* the National Assembly declared Turkey a Republic and elected Gazi Mustafa Kemal President On March 3, 1924, the Assembly passed a law abolishing the office of Caliph and ordering all members of the Ottoman dynasty to leave Turkish territory. Grand Assembly is a single-chamber legislature elected for four years, and delegates its executive power to ministers acting in its name and responsible to it for their actions.

Turkey in Europe (23,975 sq kilometres=9,256 sq miles) consists of Eastern Thrace, including the cities of Istanbul (Constantmople) and Adrianople, and is separated from Asia by the Bosphorus at Constantinople and by the Dardanelles (Hellespont)-about 40 miles in length, with a width varying from x to 4 miles—the political neighbours being Greece and Bulgaria

on the west

Turkey in Asia (738,761 sq. kilometres = 285,246 sq. miles) comprises the whole of Asia Minor, and extends from the Agean Sea to the western boundaries of Georgia, Erivan and Persia, and from the Black Sea to the Mediterraneau, and the northern boundaries of Syria and Iraq. This area corresponds approximately with Anatolia ("Land of the Rising Sun," or Orient) and includes Cilicia round the Gulf of Alexandretta, assigned to France by the Allies, but restored to Turkey by the French. Chicia is generally fertile and produces wheat, cotton, wool, sesame, &c., and is capable of considerable agricultural development; the chief port of

Criticia is Mersin.

Population. — The first general census of Turkey was taken on Oct. 28, 1227, and showed the following: the population of the Republic to be 13,650,275. the excess of women over men being approximately 500,000. The population of each of the 8 Regions into which the country is divided was given as follows -

Region	, No Kil	Population	Per Su Kil
	-	-	
Black Sea	73,6a1	2,174,425	29
Marmora & Ægean	92,744	2,746,069	29
Mediterranean	56,279	753,639	13
Turkey in Europe	<b>23,975</b>	1,044,306	43
Western Vilayet .	71,180	1,303,114	18
Central Anatolia.	: 228,791	3,499,707	15
S.E. Anatolia	40,125	604,303	14 8
Eastern Anatolia	176,621	1,534,712	· 8
Total	762,736	13,660,275	x8

Religion.-The majority of the inhabitants are Muhammadaus. There are a few Christians (of the Latin and Eastern rites) in Istanbul

(Constantinople) and a small number of Jews. On April 10, 1928, the Grand National Assembly passed a law in virtue of which Islam ceased to be the State religion of the Republic. On Nov. x, x928, the Grand National Assembly passed a bill establishing the neo-Latin alphabet in place of Turkish characters. Education is nominally compulsory and free. There are primary schools, training schools for teachers,

and at Istanbul a university, founded in roce.

Production.—Although the soil of Asia Minor is generally fertile, agriculture is tall very primitive in centues that are not served by railways. The pessant is, however, gradually adapting hunself to the more modern methods, particularly in the vilayet of Aydin, Adana, and Mersin. The live stock in 1929 was 12,124,031 sheep, 8,878,405 gouts, 2,804,685 mohair goats, 4,728,803 cattle, 495,954, horses, 849,485 asses, 74 803 camels and 495,666 buffalocs. Uereals are abundantly produced, as well as tobacco, raisins, figs, cotton, comm. Samsun is the chief centre of the tobacco-growing industry, which is also of in-portance at Izmir (Smyrna), Ismit and Bursa (Brusa). The export of merchandise is conaiderable and consists principally of opium, tobacco, cotton, carpets, gums, mohan, wool, hazel-nuts, raisins and figs The forests should be a source of wealth, but scientific exploitation is disregarded; beech, pine, oak, elm, chestnut, lime, plane, alder, box, poplar and maple are among the chief varieties of trees. The mulberry is planted for the silk-worm industry, which centres round Bursa and Isant, and this inqustry, which declined after the war, is now showing signs of revival The mineral wealth of Asia Minor is stated to be considerable, but is almost undeveloped. Chrome ore, zmc, manganese, autimony, copper, borax, corundum (emery), coal and lignite, silver and arsenic, are among the inmenals produced.

Communications .- In Europe Turkey has about 208 miles of railway, known as The Oriental Railway and run by a French Company. In Asia Minor the position as regards railways is

The smallest Republic in South America, on the satisfact appendix in south america, on let east coast of the Rio de la Plata, situate in lat. 30°-35° S. and long. 53° 25'-57° 43' W., containing an area of 72,180 square niles, and a population on Dec. 31, 1930, of 1,903,083.

Unuguay resisted all attempted invasions of

the Portuguese and Spaniards until the beginning of the 17th century, and 100 years later the Portuguese settlements were captured by the Spaniadas. From 1726-1814 the country formed part of Spanish South America and underwent many vicisitudes during the Wars of Independence. In 1814 the armies of the Argentine Confederation captured the capital and annexed Confederation captured the capital and annexed the province, and it was afterwards annexed by Portugal and became a province of Brazil. On Aug s5, 1825, through the herolam of the 33 liberators (whose memory is perpetuated in the name of the province of Trenta y Tres), the country threw off the Brazillan yoke. This action led to war between Argentina and Brazil, which was settled by the mediation of the United Kingdom, Uruguay being declared an independent state in 1838. In 1830 a Republic was inaugurated, with a Constitution of Sept. 10, 1289. The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office By an amendment to the Constitution (which came into force March 1, 1919) an administrative council was appointed to share the Executive power with the President.

The country consists mainly (and particularly in the south and west) of undulating grassy plains. The principal chains of hills are the Cuchila del Haedo, which crosses the Brazilian boundary and extends southwards to the Cuchilla Crande of the south and east. In no case do the peaks exceed a,ooo feet. The principal river is the Rio Negro (with its irributary the Yi), flowing from north-east to south-west into the Rio de la Plata. The boundary river Uruguay is navigable from its estuary to Salto, about soe miles north, and the Negro is also navigable for a considerable distance. Smaller rivers are the Cuareim, Yaguaron, Santa Lucia, Quequay, and the Cebollati. On the south-east const are several lagoons, and the north-east boundary crosses (the Brazilian) Lake Merim. The climate is extraordinarily healthy, with great unifornity of temperature, the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter.

Wheat, barley, and maize are cultivated The wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (7,127,912 in 1930) and sheep (20,558,124 in 1930), the wool of which is of excellent quality. Gold mines exist at Cufiapirú The exports are entirely animal products, and include frozen and preserved meat, wool, hides, horn, hair, tallow, and jerked beef; the imports are principally machinery, textiles and clothing, food substances and beverages, coal, oil, timber, fuel and bloodstock. The principal imports from the U.K. are woollen and cotton goods, hardware, and coals There are 1,702 miles of railway open (1927), of which 1,564 miles are in British hands, and three short lines owned by the State; 45 kilometies of the State line from San Carlos to Garzón have been opened and 72 kilometres from San Carlos to Rocha are now open to traffic; and 4,850 miles of telegraph, with 120,039 miles of telegraph, with 120,039 miles of telegraph, with 110,037,496 letters and packets. The language spoken is Spanish.

3.025,878.
Venezuela lies on the north of the South American continent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia (with which Republic the boundary is in dispute), east by British Guiana, and south by Brazil. Included in the area of the Republic are over 70 islands off the coast, with a total area of about 14,650 square miles, the largest lening Margarita, which is politically associated with Tortinga, Cubagua and Coche to form the newly constituted State of Nueva Esparia. Margarita has an area of about

oo square miles.

Venezuela was visited by Columbus in 1498, and in 1499 by Alonzo de Ojeda and Amerigo Vespucci, the former maming the Gnif of Maracabo Venezuela, or "Little Venec" (on account of the Indian pile-built settlements on the coast and shores of the lake), and the name was afterwards extended to the whole of the Ornoco basin. In 1550 the territory was formed into the captancy-general of Carácas, and the country remained under Spanish rule until the revolt under Simon Bolivar, a native of Carácas, who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1821), and thus secured the independence of the country. Bolivar was an untiring hero in the cause of independence, and through his efforts (and those of his adjutant Sucre) Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish

its independence in consequence of his victories. Be died in 1830, at the age of 47, and his remains were re-interred at Caracas in 1842. Venezuela formed part of the Federal Republic of Colombia from 1832–1830, since which time it has been independent. There have been many revolutions since 1846, particularly in 1849, 1863, 1853, 1859, 1850, 1800, and 1963. In 1854 President Monagas liberated the African slaves, and in 1854 President Falcon divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of June 13, 1879, under which the government is that of a Federal Republic of twenty autonomous States, a Federal District, and two Territories, with a President elected by the Federal Congress for seven years; a new Constitutional Law of 1925 left that position nucleaned.

unchanged.

The Eastern Andes from the south-west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritame Andes of Venezuela to the Gulf of Paris on the north-east. The main range is known as the Sierra Nevada de Merida, and contains the highest peaks in the country in Picacho de la Sierra (15,420 feet) and Salado (3,3876 feet), the marithme ranges containing the Silla de Carácas (8,537 feet). Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Eincote and de Lupuamo enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries. The Sierra Parima contains Yaparana (7,275 feet) and Duida (8,286 feet) and Para Canna contains Maraguaca (8,286 feet) and Roraima (8,350 feet), the latter being on the Venezuela-Guitana boundary. The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly Hanos, or level stretches of open prairie, with occasional woods.

The principal river of Venezuela is the Orisoco, with innunerable affilients, the main river exceeding 1,500 miles in length from its rise in the north-western mountains of the republic to its outflow in the deltaic region of the northeast. The Ormoco is navigable for large steamers from its mouth for some 700 miles, and by smaller vessels as far as the Maipuros Cataract, some see miles further up stream Among the many tributaries of the main stream are the Ventuari, Caura and Caroni from the south, and the Apure (with its tributary the Portuguesa), Arauca, Meta, and (haviare from the west, the Meta and Guaviare being principally Colombian rivers. The upper waters of the Ormoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural liver or canal, known The costal regions of as the Casiquiare. Venezuela are much indented and contain many lagoons and lakes, of which Maracaibo, with an area exceeding 7,000 square miles, is the largest lake in South America. Other lakes are Zulia Other lakes are Zulia lake in South America Como, rance at a como (ago square miles), south-west of Maracalbo, and Valencia (az6 square miles), about 1,400 feet above assalavel in the Maritime Andes. The Uanos also contain lakes and swamps caused by the river floods, but they are dry in the summer

The climate is tropical and, except where modified by altitude or tempered by sea breezes, is unhealthy, particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons. The hot wet season lasts from

April to October, the dry cooler season from November to March.

The principal industries are agriculture and cattle raising. The oilfields are of increasing importance, the production being as follows:—

1983 me			
1984	,,	1,330,911

1939		19,000,000	
1030		20.153.012	

The principal imports are cotton prints and shirtings and cotton drill, mainly from the U.K., and hardware, principally from the U.S. The principal articles of export are petroleum, coffee (64,365 metric tons in 1929); cacao (21,128 metric tons in 1929); goatskins, asphalt, sugar, hides, and balata. The U.S. is the principal customer.

There are about 680 miles of railway in operation.

Sugnish is the language of the country.

Slavoma, part of the Banat, Bosma, Herzegovina, part of Carnola, and past of Styrm, and has an estimated area of 248,050 square kilometres (94,230 square miles), with a population (Census

1931) of 13,930,918.

Montenegro (Tzrna-Gora) was, before the Turkish occupation of the remaining territory, a province of the Serbian Empire. Its independent existence ended with the decision of its Parliament (Nov. 29, 1918) to depose King Nicholas and remnte with Scibia The chief The chief towns are Cettinje (pop. 5,000) and Podgorica

Pre-War Serbia had no seaboard, but the inclusion of Croatia, Dalmatia and Montenegro in the Kingdom of Yugoslavia gives access to the Adriatic down a lengthy coast The principal Yugoslav ports are Susak, Split, Dubrovnik and Kotor, and by an agreement with the Greek Government Yugoslavia has a free zone at the port of Salomka. In 1926 there were 4,050 miles of normal gauge and 1,083 of narrow gauge railway in operation. The Danube forms a great commercial highway, and the tributary livers Save and Tisa provide other important shipping routes; the post of Belgrade is now the second busiest on the Dan-ube. The Paris-Istanbul service of the French Aviation Company (via Prague, Vienna, Buda-post) calls daily at Belgrade, which has also regular air services to Bucharest and Salomka, national company connects the chief towns with the capital. The Army on a peace footing consists of x30,000 officers and men, the war strength

being about 250,000
The Greek Orthodox, Roman Catholic, Protestant, Muhammadan and Judaic faiths are recognised by the State, nearly 47 per cent of the population is of the Greek Orthodox faith Education is compulsory and elementary education is free In 1930 there were about 10,000 elementary schools, we'll are were about re, soo elementary schools, we'll are, soo teachers, and reco, coo pupils; about so, coo attend continuation schools, and some 70,000 receive unstruction at technical colleges. There are Universities at Belgrade, Zagreb, Ljubljana and Skoplje.

The principal undustry is agriculture, over

So per cent. of the population being engaged therein. In 1929 about 5,250,000 acres under wheat yielded z,600,000 tons of wheat; maize (5,730,000 acres, 4,200,000 tons), bailey (1,200,000 acres, 420,000 tons), oats (1,000,000 acros, 350,000 tuns), rye (500,000 acros, 320,000 tuns); about 500,000 acros are under vines, which yielded 50 to yo million gallons of wine in 1929. The live stock in 1930 included 3,730,000 1929. The live stock in 1930 included 3,730,000 cattle, 1,141,000 horses, 7,736,000 sheep, and 2,700,000 swine. The mineral resources include coal (ontput 6,000,000 metric tons in 1929), iron. copper, lead, chrome ore, antimony, &c principal exports are marze, wheat, timber, live stock and meat products, prunes, eggs, poultry, skins and minerals; the imports are chiefly textile manufactures, machinery, food products and coal

(Villa Borghese, Rome.)

THE International Institute of Agriculture at Bome was founded in 1905 as the result of a Convention made between the representatives of 40 different countries. The number of nations subscribing to the Convention is 7s, and the Insti-tute may be regarded as the ploneer of official in-ternational institutions, and as the most repre-sentative of all. It is estimated that the countries and colouies adhering to the Institute represent

over gs per cent. of the population of the world.

The following is a complete list of the countries now adhering to the Convention of 1995, and therefore represented at the Institute

Cyronaica. Italian Somaliland.

and contributing to its funds :-

Abyssinia. Hungary. Italy. Eritrea Argentina. Austria. Belgium. Belgian Congo. Bolivia. Brazil. Japan. Bulgaria. Latvia. Lithuania. (Thile. Chius. Luxemburg. Colombia. Mexico. Netherlands. Czechoslovakia. Denmark Nicaragua. Ecuador. Norway. Egypt. Estonia Panama. Paraguay. Persia. Finland. France. Pern. Algeria. French West Africa. Poland Portugal. Indo-China Rumania. Madagascar. Russia. Morocco. San Marino. Tunis. Siam. Germany. Spain Great Britain and Sweden. Northern Ireland Switzerland. Australia. British India. Canada. Irish Free State. Union of South Africa.

Turkey. United States. Hawaii. Philippine Islands Porto Rico. Virgin Islands. Uruguay Venezucla Yugoslavia. The essential objects of the Institute are defined in Article 9 of the Convention and may be summarised as follows:—

The Institute, confining its activities to the international sphere, shall:—

Collect, examine and publish, with the least possible delay, statistical, technical and economic information with regard to farming, crop and live-stock production, trade in agricultural products and the prices current on the

different markets;

Greece.

Haiti.

Gnatemala.

Indicate the wages paid for farm work; Record any new diseases of crops which may have appeared in any part of the world, showing the countries affected by such diseases, their progress and, where possible, any effective measures for their control

Study questions concerning agricultural co-operation, maurance and credit in all their forms; collect and publish all information that may be useful in the various countries for the organisation of systems of agricultural co-operation, insurance and credit :

Submit, should occasion arise, for the approval of the various Governments, measures for the protection of the common interests of the common to their confarmers, and for the improvement of their con-

The Institute has its seat in Rome, in a palace in the Villa Borghese, specially erected through the munificence of H.M. Victor Emmanuel. The Governing Body consists of a General Assembly of Delegates of the adhering Governments, meeting once every two years, and of a Permanent Committee of Delegates, mostly resident in Rome, acting as its executive. Apart from the General Secretariat to which, in addition to the ordinary administrative offices, the Section of Agricultural Legislation is attached, there are special bureaus dealing with General Statis-tics, Agricultural Science, and Agricultural Economics, respectively. The Institute also possesses an important Library, contaming about rag, coo volumes and pamphlets, and 80,000 unbound sets of periodicals from all parts of the world, while over 3,500 peric licals are received regularly. Thus the Library offers quite unusual facilities for the study of agricultural problems, and permission to utilise its resources is readily accorded to all properly accredited persons.

Information on agricultural questions is given mainly through periodical publications, issued in English and French and, in some cases, also in Spanish and Italian. These periodical publications include two Year-Books, the International Year-Book of Agricultural Statistics and the International Year-Book of Agricultural Legislation: the International Review of Agriculture, published monthly, and divided into three separate sections, dealing respectively with Agricultural Science and Practice, Agricultural Economics and Sociology, and International Agricultural Statistics, while in addition an International Bulletin of Plant Protection appears each mouth. These periodical publications are from time to time supplemented by monographs based on special research or specially acquired information.

A new feature in the publications of the Institute is the *Economic Commentary* published for the first time at the beguning of 2021, of which the second issue should appear at the end of the year. This Commentary discusses agricultural markets and prices, Government and unofficial action in relation to agricultural questions, and the position of farmers during the previous agricultural year. It is intended to

serve as a volume complementary to the International Year-book of Agricultural Statistics. In addition, special monographs dealing respectively with the Crop Results of the 1320 season and with the provision of Experimental Stations and similar institutions in Tropical Countries have been published during the year. The various publications of the Institute may be obtained in London from Messrs. P. S. King and Son, or may be ordered from Bestetti and Tumminelli, 32 Via Michelaugelo Gaetani, Rome. The economic work of the Institute has

been greatly strengthened by the recent appointment of its expert Agricultural Economic Committee, which advises on the economic and statistical programme in its international aspects in general, with special reference to the requirements of the Economic Consultative Committee of the League of Nations. With the estab-lishment of this Committee the Institute may be said to have completed the list of advisory bodies required to give the cachet of anthority to its work. The International Agricultural Scientific Council, through the expert members of its various Commissions, is in a position to advise on any purely technical questions that may arise, and the Permanent International Commission of Agricultural Associa-tions (which has now a regular monthly organ) provides means for ascertaining the views of practical agriculturists. At the same time liaison with other bodies interested in agriculture is maintained by the International Commission for Co-ordination in Agriculture, which is also

attached to the Institute.

The World Agricultural Census of 1929-30, undertaken by the Institute with the object of obtaining on a uniform basis as complete an inventory as possible of the agricultural resources of the world, has, as a result of very careful and detailed work of preparation, achieved a large measure of success. The number of countries which made their census in accordance with the standard forms prepared by the Institute fully reached expectation, and many completed returns are already available. A beginning is now being made with the publication of these results, and in order to facilitate their utilisation they are being issued separately for each country as they come to hand, in as uniform a shape as possible, and in English and French as the most generally known languages General studies interpreting the documentation thus collected and methodological studies—of which the particular object is the perfecting of future censuses-constitute the second stage in the programme of work which the Institute proposes to accomplish on the basis of the information supplied by this first world census of agricultural production.

The most important feature of the public work of the Institute during roar was the Intermational Preparatory Conference of the and World Wheat Conference, which took place at the Palace of the Institute from March 26 to April 2. Official Delegates from hearly 50 countries took part in the proceedings, and there were also present, as Observers or specially invited persons, representatives of the League of Nations, the International Labour Office, the International Chamber of Commerce, the London and Liverpool Corn Trade Associations, and similar bodies. The main questions discussed Secretary General. Prof Alessandro Brizi.

included the International Organisation of Wheat Production and of the Wheat Trade, International Agricultural Credit and Preferential Tariffs, and the Conference adopted an important series of resolutions, which have been communicated to the various Governments. Inter alia, special stress was laid on the necessity for an improved organisation of the Wheat Market, on the better organisation of world wheat production (which would largely depend on improvements in the provision of information and
of statistical forecasts, and on the value of short
term agricultural credit in the present crisis.
A direct outcome of the Conference was the

meeting on May 18 at Canada House in London, under the Presidency of the Hon George Howard Ferguson, High Commissioner for Canada, of representatives of Overseas and Emopean wheat exporting countries for the purpose of drawing up a plan for dealing with the wheat export

season 1931-32, and with existing stocks.

The question of Short Term Agricultural Credit was again discussed on Angust 12-13 at a meeting of experts convened by the Institute, when a scheme for the constitution of an International Agricultural (short term) ('redit Bank was drafted.

A Conference of Experts preparatory to an International Diplomatic Conference on the Marking of Eggs in International Trade, which it is proposed to hold at an early date in Bi ussels, took place at the Institute on May 11-13. The Conference was of a fully representative char-acter and drew up a Draft Convention, which will form the basis of discussion at the later meeting.

The two most important events at present arranged for resemble and the Second World Wheat Conference and the Eleventh General

Assembly of the Institute

President. His Exc. Prof. G. De Michelis (Delegate of Italy).

Vice-President: M Louis Dop (Delegate of

France).

British Delegate: H. L. French, CB, OBE. (Ministry of Agriculture and Fisheries). Delegate of the Irish Free State, M. Harvey

Rafferty.

Delegate of the Indian Empire Sir Bhupendra Nath Mitra (High Commissioner).

Delegate of the Union of South Africa: His Exc. Barend Pienaar.

#### , DISTANCE OF THE HORIZON.

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plant, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of as feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of 500 ft	the range is	At a height of 4,000 ft	the range is 83'3 miles.
80 ,,	5'9 ,	I,000 ., ·		5,000 ,,

of agg had been gathering force for a year or more, unseen by all but the most acute and experienced observers. Its immediate conse-quences at home were the fall of the Labour Administration, the institution of a National Government which will probably affect the whole field of politics for a generation, the suspension of the Gold Standard, and a general election fought under conditions which had never previously existed As early as February, Mr. Snowden had indicated that all was not well with the national fluances, and in his Spring Budget he showed anxiety concerning the world depression, but he seemed hopeful that the deficit night be cancelled out by the economies which were to be suggested by the committee which had been set up. But although that committee made a series of drastic proposals, the general situation, not only in Great Britain but throughout the world, had by that time gone from bad to worse. "To produce a properly belanced Budget in 1932, "said Sir George May and his colleagues, "a deficiency of £120,000,000 has to be made good by new taxation and by commiss." Mr. Snowden's own view of the position when he produced his emergency Budget was that the deficiency would be even greater-£170,000,000—and it was this enormous sum that the National Government set itself to cover by a "Nationcombination of economies and taxes ally, we have for some time been living beyond our means and living to a considerable extent upon our capital," declared Mr. Snowden. There were, however, other important causes. The financial stability of Germany was one, the gold shortage caused by the withdrawais by the United States and France was another. Only a week after Parliament adjourned for the recess, the Bank of England realised that a serious situation might have to be met because of the outflow of deposits and the danger to gold reserves. Temporary credits were obtained, but these were nearly exhausted by the time the National Government took office There is no doubt that but for the change of administration the £ would have crashed-not merely declined, as was the case when Britain went off the Gold Standard. There was a lack of confidence abroad, and the immediate need was to balance the Budget, so that a loan could be obtained. Even when the Budget had been balanced, the international position was too serious. months funds amounting to over £200,000,000 were withdrawn from the London market, the withdrawals being met partly from gold and foreign currency held by the Bank of England, partly from the procee is of the first credit of £50,000,000 secured from New York and Patis, and partly from new French and American credits of \$80,000,000. Finally the withdrawals, mostly for foreign account, became so constant, and the international fluancial markets so demoralised—so much so that they were liquida-ting their sterling assets regardless of their intrinsic worth—that the Government decided that there was no alternative but to protect the financial position of Great Britain by suspending the Gold Standard. The step was generally The step was generally approved and was not so serious as it appeared. It was taken not because of internal financial difficulties, but because of excessive withdrawals of borrowed capital, a very different matter

INTERNATIONAL in its origin, as well as in its effects, the financial crisis which swept like a lanced Budget and uncontrolled inflation, typhoon over Great Britain in the holiday month of regar had been gathering force for a year or more, unseen by all but the most acute and cyclety arrested and slight improvements were experienced observers. Its immediate conse-

#### THE MACMILLAN REPORT.

THE Committee on Finance and Industry began work, under chairmanship of Lord Macmillau, in November, 1929, and issued its report on July 12, 1931, with approval of all members except Lord Bradbury. Inter alia, the report expressed: The 1929 return to Gold Standard had not fulfilled anticipations, but a reversal of policy would not necessarily mean making good mistakes. Important British income was derived from international banking and associated services. It is not our case that industry should be sacrificed to finance. It would not be possible for a country so intricately concerned with outside would as Great Britain to escape simply from repercussions of instability elsewhere. We must continue attempt to recure sound international currency, De-valuation of a currency standing at par without notice is emphatically inexpedient. International confidence is based on belief that national currencies will be majntained at fixed legal value. Great Britain's position as creditor country remains immensely strong. Stabilisation of world wholesale prices at present figures would be a world disaster. The aim of British monetary policy should be, with the co-operation of the central banks, to first ruse and then stabilise a price level in com-modities. Sound policy must lie at home in modities. Sound policy must he at home in maintenance of foreign exchange partites, avoidance of a credit cycle, and price level stability. Managing authority should be the liank of England, that would adapt itself to new conditions. After pointing out that sole use of a gold reserve was to meet deficits in international payments until measures could be taken to secure equilibrium again, it was laid down that central lanks should not mas gold or gold cerscentral banks should not pass gold or gold cor-tificates into currency, should give collective consideration to legal requirements for gold reserves, regard deposits in B.I.S or other central banks as gold equivalent. Central banks should be autonomous, especially in collection of gold and stopping inflation. The long term investment should go with the present fashion of short terms, and tendencies in a country to keep excessive liquid balances should be curbed

Present omergency called for greater willingness to buy and lend on part of credutor countries as first step towards restoration of price level. Otherwise, creditor countries would absorb remaining gold from debtors and create defaults. A concerted policy was essential between Central Ranks of Britain, France and U.S. A. With Bank of England, policy was wrong in locking up gold instead of having it available for export. Parliament should give Bauk power to issue notes up to £400,000,000 and to reduce gold holding to £75,000,000, but as statutory figures only. The Committee desired to give elasticity on occasion of necessity, but was not in favour of a reduction in the normal stock of gold. Joint Stock Banks were to reduce their holdings of notes. Increase should be made in total resources of Bank of England, including liquid funds abroad. Banks should assist in setting up financial organisations of type of Bankers Industrial Development Company to help industry. Suggestions were

put forward in distribution of trade statistics and information. The Committee reviewed recent international financial history—maldistribution of gold being held responsible for price falls—and dealt with production costs.

#### THE HOLMAN-GREGORY REPORT.

Royal Commission on Unemployment Insurance was appointed Dec. 9, 1930 (Judge Holman Gregory, K.C., Chairman), to enquire into working of Insurance Scheme, recommend means to make it solvent and self-supporting and suggest arrangements ontside the Scheme to provide work for unemployed. Pressure was brought on Commission to funnish an early Report after hearing certain witnesses and this became available in June The Majority Report (five members) drew attention to a surplus of £22,000,000 in the Unemployment Fund in July, 1921, and a deficit of £82,810,000 on May 23, 1931 Revision was necessary to limit benefits to a6 weeks in any year, increase all contributory rates in ratio to an adult male standard of 9d. from employee, employer and State, reduced benefits based on 15s. weekly for adult males, plus 8s. and 2s for adult and children dependents. Transitional benefit should be same as insurance benefit claimants having to show 8 contributions in preceding two years or (30) in six previous years; resources of applicant should be taken into account and no benefit to be paid to a person refusing work offered. Anomalies in regard to part-time workers, married women and seasonal workers were to be dealt with. The Minority Report (two members) objected to sweeping proposals in an interim report, desired maintenance of unemployed on a level not lower than that in force, accepted casual workers' proposals but differed themselves on limitations of benefit to married women. A Bill was subsequently introduced in Parliament and became Law, Unemployment Insurance Act No. 3, on July 31, putting into force most of the recommendations in regard to Anomalies. This Mensure would effect small economics but left untouched the greater financial proposals of the Majority Report

# THE ECONOMY REPORT

A Committee of seven, Sir G E May as Chairman, was appointed by Mr MacDonald in March, 1931, to make recommendations "for effecting forthwith all possible reductions in national expenditure on Supply Services."

Reports (majority signed by five and minority by two members) were issued July 31, Parliament had just risen for the summer adjournment. After pointing out Parliament's habit of voting expenditure, "enjoying benefits for which we are not providing the cost," with fixed amounts without taking into account the falling piece level, the horrowing on behalf of the Unemploy-ment and Road Funds, and additions to national and municipal burdens at a time when industrial enterprise and employment were decreasing, the Committee stated that with even optimistic revenue collections this year the Budget of 1931 would show a deficiency of £120,000,000, apart from any extra sums arising through the Wai hebt moratorium. This was "no transient feature to be bridged by temporary expedients."

Tables in the Report showed a comparison between 1924 and 1932 national expenditure and 1920,000,000 so, the Austrian Parliament grants (chief increases being Pensions and anteed payment of foreign short term credits, Insurance, £34,600,000; Education, Housing, and the Government obtained permission from

&c., £22,100,000) to make a gross addition of £130,000,000 in social services and home developments. The Report submitted reductions of money obligations previously fixed to meet the rise in money value, national realisation of whether country can afford much of present expenditure considered desirable, but not necessarrly essential, and trade restoration with reabsorption of unemployed into industry could only follow strict regard to State efficiency and economy. For the future, Parliament should be given more economic information than by one Bridget speech annually, a Finance Committee on lines of imperial Defence Committee established in Cabinet, and politicians curb their electonal promises of financial help. The Minority Report asked for the long view as against temporary reductions in expenditure, and if sacrifices are essential they should be distributed according to capacity to withstand and not only upon certain large sections of the community as recom nended in the list of "cuts by the Majority Report. The proposed cuts were :-Development-

Development	
Road Fund	£.7.864.000
Agriculture and Fisheries	575,000

#### AUSTRIA AND GERMANY.

Next to the War itself, the root of collapse goes back to the action of Germany in 1923, in destroying the value of the old mark. Thenceforward, Germany could only carry on with the aid of foreign loans to meet reparation payments and finance home industry. Austria's position was weak, a particular sign being the compulsory acquisition of the Boden Creuit Anstalt, and another bank by the Credit Anstalt, that became then the predominant financial honse of Austria with 70 per cent. of the total bank deposits of that country. In May, 1931, the amouncement was made of tremendons losses. The Austrian Government had subscribed 200,000,000 schillings, and the Austrian National Bank and Mesers. and the Austrian Radional Dania and Austrian Rothschilds 20,000,000 each (*1 = 35 sch.), in hope of austaining public confidence, but foreign withdrawals were heavy. The B.I.S. lent withdrawals were heavy. 100,000,000 sch., the Austrian Parliament guaranteed payment of foreign short term credits, the League of Nations Commission to borrow specioscopic sch. This was to be raised internationally, but owing to the pressure of time the Bank of England provided the whole on June 56. The Anstatt's debtors included £75,000,000 belonging to foreigners, of which Great Britain was largest with £27,000,000. British money was thus locked away to this extent.

Though Germany was interested to the extent of only £5,000,000 in the failure, the reaction was feit acutely. German nationals began to withdraw home funds and remit overseas for fear of another mark collapse; credits by France, Great Britain, U.S.A., and other short term lenders began to be called in. The result was a banking crisis in Germany, the Darmstadter und Nationalbank having to snapend payment. Germany was also still feeling the effect of the big capital withdrawals of the September, 1930, election crisis. The Berlin Bank Itate increased from 5 to 7 per cent. on June 23, 1931, to 20 on July 25. The cover on notes had now fallen to least than the legal infinium of 40 per cent. The loss of gold by the Reichebank, from May 23 to June 23, was 979 coo,000 reichemal ks; foreign exchange holdings fell in same time from 271 to 90 million rms. To support the Reichebank, a credit of 400,000,000 rms. was raised jointly in equal sums by Fed. Res Bank of New York, Banks of England and France, and B.I.S. Now came an appeal from Germany against the Young Plan, on the ground that its assumptions were wrong. Germany possesses power to postpone payment for two years, apart from the 660,000,000 marks to be derived from State railway duties.

#### WAR DEBTS POSTPONEMENT.

On June 20, 1932, President Hoover issued from Washington a statement—"Subject to confirmation by Congress, the American Government will postpone all payments on the debts of foreign Governments to the American Government, payable during the fiscal year heginning July 2, 1931, conditional on a like postponement for the year of all payments of inter-Governments debts" Obligations by Governments to civilians were not included. This moratorium, became effective from July 6, apart from agreement on minon details. The relief to Germany in a year's payments was 800,000,000 marks. The total Inter-Government Debt repayments due to Great Britain in the year to June 30, 1932, was given in House of Commons, July 14, a-542,790,000; this included £337,000 from South Africa that wished to make the payment, but not the £1,686,000 previously postponed by Australia. The experts, who considered the moratorium, recommended on Ang. 2x that the suspended payments for the year should be paid in ten equal annual instalments with interest at 3 per cent. from July 2, 1932.

### LONDON CONFERENCE.

On July 8 a German guarantee syndicate was established to give collateral security of 500,000,000 marks through the Gold Discount Bank. This inspired confidence. The C.D.B. then closed with an old offer of a \$50,000,000 credit in U.S.A. The June credit of 400,000,000 marks was extended to the Reichsbank. A run upon gold and foreign exchange resources (not a simple run upon the banks by the public) was in full swing in Germany. On July 50, the seven-power Conference summoned by the Britash

Government met in Loudon (Mr. MacDonald, Chairman). As a result of the private deliberations it was decided to call upon the B.I.S. to ascertain the futher credit needs of Germany and the possibility of turning its short term into long term loans. Messrs. MacDonald and Henderson then paid a personal visit to Berlin, returning on July zo with an announcement of "a most successful meeting." On Aug. z the Reichsbank raised its discount rate to zg per cent.; the Darmstadter (Panat) Bank also reopened to pay m full if needed, this being made possible by introduction of new industrial capital of 43,000,000 marks. German banks had been closed, except for small business, since July zs, but their re-opening did not lead to extraordinary withdrawals.

# STERLING AND CREDITS.

A constant dram had been observable upon London Funds since the General Election of 1989. In 1939, the favourable credit balance was £138,000,000 in British Trade, though our £138,000,000 III British Finds, bindight on imports exceeded exports by £366,000,000 thanks to foreign investment yields, shipping, banking and other services rendered the world by Britain. Within a year, the favourable credit balance had dropped to £39,000,000 in the estimate of the Board of Trade, and by the middle of 1931 the credit balance no longer existed. With that disappearance, the real basic strength of sterling had gone On July 6, the Bank of England's return showed the highest gold holding of the year. Nine days later, immediately after the German bank crisis, the value of the £x fell to below the point at which gold moves (\$4.83 x/x6 compared with 484 13/16). The French franc value moved newards. In eight days £20,250,000 gold was taken from the Bank of England. To stem the tide of withdrawal from London, the bank rate of discount was raised from \$\frac{1}{2}\$ to \$\frac{1}{2}\$ per cent, on July \$\frac{1}{2}\$. Then followed the visit of Messis. MacDonald and Henderson to Beilin. Gold was still leaving the Bank. In the course of a week, the loss was £16.734.93x, bringing down the holding to £133.300,000, with the result that the discount rate had to be raised to 4½ per cent. on July 30. At this point the Economy Committee Report threatening a definit of £120.000,000 in the Budget appeared. On Aug. 2, the Bank of England raised credits of £25,000,000 each with Bank of France and Federal Reserve Bank of New York in the hope of maintaining the exchange for sterling. The Theasiny now gave authority for the increase of the fiduciary issue from £36,00,000 to £37,000,000 (pernission being extended in periods), thus enabling the Bank to ship gold, if necessary, without interfering with supply of currency. The credits soon disappeared and negotiations began with a view to further support. On Aug. 28, the Treasury amounced that one year Loans for £40,000,000 each were to be raised in New York and Paris. Commissions and expenses of issue were £1,047,000. During these days, a political crisis was careeting madly on in London, the world assuming the worst and the foreign exchange manipulators driving hard against the value of the £1 Bittain was driven off the Gold Standard to During which a return had been made after the war by the Act of rgas. Pallament passed the necessary Suspensory Act on Sept. 27 The Bank return of Sept. 30, rgar, showed a gold holding of £134,87,865, plus gold and allver coins of

£1,342,839. At this figure, apart from small interior collections, the stock is likely to remain since gold went up to over £5 &. 6d. per oz. in the buillion market. (Under 1925 &. 6d. per oz.) Speculation had to be curbed on Stock Exchange by making all bargains for cash, and immitation of foreign exchange transactions to business essentials. Exchanges went naturally against Britain, falling as low as 3.75 against a par £4.866 on New York, and France 95 against fcs. 124.22 par on Oct. 5. The gold holding of the Pank of France had grown to 59,346,70,000 fcs in return of Sept. 25, 2931, from 56,525,000,000 on June 19 previous. Monetary gold in U.S.A. on Sept. 9 was \$5,000,000,000, an increase of \$197,000 coron from June 20. The U.S.A. had practically half of the world's gold.

Bolivia, Norway, Portugal and Sweden also temporarily abandoned the Gold Standard after Sept zz. ragz. The Danish Government prohibited export of gold as from Sept. zz., and on Sept. zo suspended the Gold Standard until Nov. zo, the note cover being reduced officially from so to 32% per cent. N. and S. Rhodesia and Finland joined the list of countries that temporarily suspended gold payments on Oct. zz. Canada stopped the export of gold on Oct zg. and so practically came off the gold standard.

An immense amount of capital has been lying "frozen" in the U.S.A. banks, failure to employ it undoubtedly making unemployment acute, and, in the hope of creating liquidity and confidence, President Hoover suggested in the first week of Oct. the establishment of a \$500,000,000 Institution. The delentures were immediately subscribed by the banks, a 2 per cent. levy on deposits being proposed in the Presidential statement issued on Oct 7 after an all-party Congress Conference. By discounting securities ineligible for discounting by the Federal Reserve Banks this Institution will permit the release of locked-up credits. The widening of the Federal Reserve Act in giving more discount powers to the twelve Reserve Banks was also recommended by the President. In view of the U.S.A. bank collapses (Jan. z-Sept. 30, z,234 banks were snspended, involving \$929,485,000 deposits; son with \$122,525,000 were re-opened) Reserve Banks were requested to help in early

payment of dividends to creditors. The U.S.A. felt a gold draught in September and October; the equivalent of the net gain in gold in range and r930 of \$700,000,000 was exported in the course of six weeks, Europe being the destination. In October, M. Laval paid a visit from France to U.S.A.

# BANK FOR INTERNATIONAL SETTLEMENTS.

First annual report of the B.I.S. was issued on May 12 to cover the period Miny 17, 1230 (date of beginning business) to March 27, 1232. Accounts are kept in Swiss francs. Deposits on latter date were 1,780,000,000 fcs.; assets, 2,900,000,000 fcs.; profit for 10. The months working, 12,125,221 fcs., distributed between legal reserve fund 5 per cent., dividend on shares, 6 per cent., dividend reserve, 1,094,285 fcs., and general roserve, 2,283,378 fcs. Bank accepts deposits only from central Banks and Governments besides being trustee of German annuity reparation payments. B.I.S. reported having transferred surplus sums from certain markets for easing stringency in others whilst book transfers were made between Central Banks without transactions going through ordinary exchange markets, thus obviating wide exchange fluctuations. The monthly statement of July 32 showed a drop of deposits to 1,632,000,000 fcs., due, it was said, to changes brought about by the Hoover plan (Germany having paid only 31,000,000 marks of the Young Plan on July 25, central banks selling exchanges to meet withdrawals of capital from their markets, but losses in this direction were partly counterbalanced by increased deposits of banks of countries making the withdrawals on Aug 3 the B.I.S. renewed for three months a credit of £50,000,000 to German Reichsbank. In July the B.I.S. had loaned the Austian National Bank, 100,000,000 schillings for the discounting of the bills of the Credit-Anstalt, the first instalment of 10 per cent. was repaid on Sept. 20. Deposits were shown in the B I S. statement of Rept. 20 as 1,273,627,673 Rwiss fcs., a drop of a fifth in the month; this fall was due to withdrawals, owing to monetary situation and reparation re-arrangements.

#### PILOTS' EARNINGS.

The majority of the 320 pilots attached to the Port of London had not average incomes approaching £1,000 or over that amount during 1929.

An official return issued Nov 8, 1930. shows that the average net earnings were .---

Service and Number Engaged.	Average Earnings.	Extra Services.
Channel pilots (76)	£1,059	£23
Cinque Ports pilots (70)	903	19
North Channel pilots (47)	863	30
('ompulsory River Thame		95
Home Trade pilots (2)	793	147

Two pilots at Rochester did even better, for they averaged £1,008, with £217 for extra services.

#### SIGNS OF THE ZODIAC.

The Signs of the Zadiac are shown below in accordance with the apparent motion of the Snn, from January to December.

THE system of government by party in Great Britain is the outcome of a gradual constitutional development. Until the "Glolions Revolution of x685," the principal Officers of State, chosen by the Soveneign, were responsible to him alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not necessarily involve the fall of another, although all were liable to dismissal at any moment. Pattes came into existence and gained increased importance as Parliament claimed and secured predominance in affairs of State, and it has long been a custom of the Constitution for the Sovereign to entrust the conduct of affairs to the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons. The principle of joint Cabinet responsibility is also fully established, and internal disagreement leads to a change of personnel or realignation of the whole.

change of personnel or resignation of the whole. In 1693 the Earl of Suuderland recommended to William III. the advisability of selecting a Ministry drawn from the political party which enjoyed a majority in the House of Comnons. The existing parties were known as Whiys and Tories, names given by opponents to each other in the reign of Charles II., and continuing as political labels until Whig was changed to Liberal in 1888, and Tory to Conservative in 1898.

The first united Ministry was drawn in 1696

The first united Ministry was drawn in xoos from the Whigs, to which party King William III. owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton, said Charles Montague (afterwards Chancellor of the Exchequer). This group was known as the Janto, and was regarded with suspicion as a novelty in the political life of the nation.

At the accession of Queen Anne the government was largely in the hands of the great Duke of Marlborough, with a Tory Ministry and a strong Tory majority in Parliament, but in 1702 a Whig Parliament was elected with a gradual return to power of the Whig Ministers, but their persecution of D. Sacheverell offended Queen Anne and led to their downfall. At the end of the telign there was a Tory Parliament and a Tory Ministry under Lord Harley and Lord Bolingbroke. Harley was dismissed by the Queen, and Bolingbroke opened secret negociations for the return of the Stuarts, in which he was thwarted by the Duke of Shewsbury, himself a former supporter of the eviled King, but in his later life an avowed Whig, and the most notable adherent of the Hanoverlan succession.

The accession of George I. was a complete triumph for the Whigs, whose cause was strengthened by the suppression of the first "Jacolite Conspiracy" of \$775-46. The effect upon the development of the party system was even more marked, as the King was scarcely able to understand the English language. His attendance at meetings of the Cabinct became useless and irksome, and allowed the appearance of a Prime Minister, and his example has been so consistently followed as to have become a settled custom. The two foremost statesmen at the time were Lord Townshend and Lord Stauhope, but after the financial crash of \$720, which witnessed the failure of the South Sea Company and several others formed in connexion with it, Sir Robert Wulpole took office and held it without a break for over twenty

years (1750-42) resigning his various offices after a parliamentary election which returned a majority of members opposed to his policy. During Walpole's strong administration the Tory party had sunk into insignificance in the

During Walpole's strong administration the Tory party had sunk into insignificance in the House of Commons and opposition to Walpole was offered principally by a section of the Whig party, headed by Lord Pult.uey and Lord Chesterfield. This section was joined by the remnant of the Tory party, but there was no great change in policy after Walpole's retirement, Lord Wilmington becoming Prime Minister until his death in 1743, when he was succeeded by Henry Pelham, brother of the Duke of Newcastle, who remained in office until his death in 1754.

Two years later William Pitt became Secretary of State under the Duke of Newcastle, who had led the government since his brother's death, but the accession of George III. was followed by the rise of Lord Bute, a Torj, and an avowed advocate of the supremacy of the monarchy over parliament and parties. Lord Bute was appointed Prime Minister in 1761, and caused the resignation of Pitt as Secretary of State and leader of the House of Commons. Lord Bute was succeeded by George Grenville, who became unpopular at home owing to his attempted suppression of the liberty of the Press and in the North American Colonies through the imposition of the Stump Act Upon Grenville's retirement in 1765 the King invited William Pitt of form an administration, but Pitt declined owing to lack of parliamentary support and the post was accepted by Lord Rockingham.

In 1765 Pitt became Prime Minister and was

In 1766 Pitt became Prime Minister and was created Earl of Chatham, but his health failed in 1767 and the Duke of Grafton (1767-70) and Loud North (1770-8a) led the Tory party until the return of the Whigs to power under Lord Rockingham and Lord Shelburne.

In 278x, William Pitt, the jounger, second son of the Earl of Chatham, entered Parliament at the age of az, and became Chancellor of the Exchequer in Shelburne's government. In 2783 Lord Shelburne resigned, and a Coalition Ministry was formed by the Duke of Portland, with Charles James For and Lord North as Secretaries of State, the Ministry meliding the Whigs who followed Fox and the Tory supporters of North. This Coalition marked the first departure for over 60 years from the rule of strict government by party, but it soon broke up after a defeat on the India Bill introduced by Fox, and the Ministers resigned

William Pitt became Prime Minister in 1783, when in his sight year, and a general election in 1784 gave him an overwhelming majority in the House of Commons. He remained in office until 1801, when he resigned owing to the King's opposition to Cathohe emancipation, and was succeeded by Henry Addington. In 1804 Pitt returned to office, but his health was faiting and he died on Jan. 23, 1806. During his membership of the House of Commons, parliamentary debates were distinguished by the orational duels between Pitt and his great opponent Fox, and opposition and occasional support from Edmund Burke.

Pitt's second administration was followed by a National Ministry, known as "The Ministry of All the Talents," formed under Charles James Fox and Lord Grenville for the prosecution of the war with France. This Ministry was dissolved by the death of Fox in Sept. 1805, and the Duke of Portland became Prime Minister in

2807, followed by Spencer Perceval, who was assassinated in 1812. The death of Perceval was followed by the long administration of the Earl

rollowed by the long administration of the Earl of Liverpool (1812-29).

George IV.'s accession did not alter the political course of the country, and in 1827 George Canning, who was an adent supporter of Fitt in his early years and had held office under him, was Prime Minister for a few months. At his death he was succeeded by Lord Goderich, who resigned in 1829, when the Duke of Wellington accepted office as Prince Minister.

The Duke of Wellington's administration was marked by the passing of Catholic emuncipa-tion, largely through the aid of Robert Ped, and by means of support from the Whigs, but the Tory party had become disorganised, and

Wellington resigned in 1830.

wellington resigned in 1830.

Parliamentary Reform had been advocated by the elder and younger Fitt, and was brought about at the beginning of William IV.'s 1eign in Earl Grey's administration (1830-34). The Wings had adopted (1838) the name of Liberal, and the Reformed Parliament contained a large majority of Liberals, with an advanced wing, known since 1816 as 'Radical Reformers' or Radicals. The Reformed Parliament also witnessed the growth of an Irish Party under Daniel O'Counell, formed from the Itish members brought into the House at the Union of 1801. The Tory Party also changed its name (at the mstigation of John Wilson Croker, an Irish M.P.) to Conservative, and formed a compact opposition under the leadership of Sir Robert Peel, who became Prime Minister for a few months (1834-38) between the two administrations of Lord Melbourne, and held office acan, with a considerable Conservative majority in the House of Commons, from 1841 46. Sir Robert Peel entered office as an avowed

Protectionist, but a potato famme in Ircland, and a disastrous harvest in England brought about the repeal of the Corn Laws with Liberal When Peel retired from office the support. When rest returned from office for conservative party was distincted, the mal-contents or "Young England" party meluding Benjamin Disraeli, who had been elected M.P. for Mandstone in 1837

Free Trads was the dividing line between Conservatives and Liberals at the polls or many

years, the principal exponents being Richard Cobden, termed the "Aposents reing Atlanta Cobden, termed the "Apostle of Free Trade," and John Bright. Free Trade carried the day, and from 1847 to 1865 the Government was in Liberal hands (with the exception of two short administrations under Lord Derby in 1855 and 1858), the great parliamentary figures (in addition to Cobden and Bright) being Lord John Russell, Lord Palmerston (whose Itish peerage enabled him to sit in the Commons) and William Ewart Gladstone, whose oratorical duels with Benjamin Disraeli revived the memories of Pitt and Fox.

Lord Derby was Conservative Prime Minister for a third time from 1866, with Benjamin Disraeli as leader of the House of Commons. Disraeli succeeded as Prime Minister on Loid Derby's retirement in February, 1868, but the House of Commons, elected after a Reform Bill passed by the aid of the Liberals, showed a large Liberal majority. Gladstone's first administration lasted from 1868 to 1874, when a General Election again placed Disnaeli in power for six years, but in 1880 the Liberals were returned with a majority of 6z, and the second Gladstone administration lasted until the Home Rule

election of x886, except for an interval of a few months in 1885, when the Conservatives were in office under Lord Salisbury.

Home Rule for Ireland temporarily displaced Free Trade as a dividing line between the two great parties in the State, and a new party had great parties in the state, and a new party man been formed in the House of Commons from Irish members pledged to Home Rule, following a movement initiated in 1872 by Isaac Butt, member for Limerick. A Home Rule resolution was defeated in the House by 314 to 52 in 1874, but the General Election of 1882 returned 60 members pledged to fight for Home Rule Butt died in 1879 and was succeeded as hader by William Shaw, who gave way in 1880 to Charles Stewart Parnell,* member for Meath and afterwards for Cork City. Government by Party majority thus became complicated through the existence of a third party possessed of sufficient voting strength to turn the scale in a division,

voting strength to turn the scale in a division. Home Rule caused many secessions from the Liberal party (including Lords Hartington, Selbone and Derby, John Bright, G. J. Goschen, Joseph Chamberlain, Sir John Lubbook, and Sir Henry James) and resulted in the formation of a new party of Liberal-Unionsis, who acted generally in concert with the Conservatives. In 1988 a Lineary Election, returned a maintive of 1886 a General Election returned a majority of 114 against Home Rule, and Lord Salisbury became Prime Minister as leader of the Unionist party, which was in power, except for a Liberal Administration (1892-95), until 2005, Arthur James Balfour succeeding Lord Salisbury as

Prime Minister in 1908.

In 1903, Joseph Chamberlain spoke at Birmingham on trade preference and reciprocity with the Dominions. His policy became known as Turif Reform, and was vigorously opposed by the Liberals. Mi. Chamberlain claimed that the fiscal relations of the country had wholly changed since the days of Cobden and Bright, and he advocated retailatory tariffs when the interests of Great Britain and the Dominions were threatened. The policy was much in prominence during the election of 1906, which, however, gaye the Liberals the unprecedented majority of 356. But another party had come into being, Labour members being elected in a strong force. The pioneers in the cause of Labour had hitherto professed advanced Radicalism, and the small handful of 1895 (12) and 1900 (11) was nucreased to 52 11 1006.

In roos the office of Prime Munister, which had been in existence for nearly 200 years, was officially recognised, and its holder granted a place in the Table of Precedence

Sir Henry (ampbell-Banierman, the new Liberal Prime Minister, died in 1908 and was succeeded by Herbett Henry Asquith, who remained in office until after the outbreak of the Great War. He was succeeded on Dec 7, 1916, by David Lloyd George (who had been Chancellor of the Excheque: since 1908 at the head of a National Ministry formed from the Liberal and Conservative parties.

Home Rule had been granted to Iteland before the war, but the state of affairs in Ireland caused the Legislation to be suspended, and Irish members of the House of Commons numbered 105 until they were reduced to 13 by the passage of the Government of Iteland Act of rost.

Owing to trouble of a non-political nature the Irish Kataonalists split in 1890 into Parnellites and Anti-Parnellites Parnell died in 1892 and John Redmend became leader of the Irish Home Rule party in 1892.

The Coalition, for National Government, appealed to the country in 1918 and was returned to power with a majority of 1953, the Opposition consisting of 86 Irish Nationalists, 63 Labour and 85 Independent Conservatives and Liberals. The Coalition was dissolved in 1923, and government was again conducted on party lines, 347 (Conservatives being returned at the General Election, the Opposition (1988) consisting mainly of 142 Labour and 199 Liberals.

Women of 30 were admitted to the Franchise at the election of 3918, but the first woman elected to Parliament (Countess Markiewicz) did not take a scat in the House, the first to do so being Lady Astor (1919). At the dissolution in 1931 there were 15 women members. Margaret Bondfield was the first woman member of the Cabinet and of the Privy Council. At the election of 1929 women had the vote on equal terms with men. Women so elected (up to the Dissolution in Oct. 2931) have been Labour (12), Conservatives (4), Liberal (4), and Independent (2). They have not formed a separate party. Andrew Bonar Law was the first post-war Conservative Prime Minister, to be succeeded in the party of the prime Minister, to be succeeded in the prime Minister, to be succeeded in the prime Minister, to be succeeded in the prime Minister, to be succeeded in the prime Minister, to be succeeded in November 1919.

Andrew Bonar Law was the first post-war Conservative Prime Minister, to be sneeseded in 2013 by Stanley Baldwin. In November, 1923, Mr. Baldwin outlined a policy of protection for British Industries, which was vigorously opposed by Mr. Asquith and Mr. Lloyd George. In December a General Election resulted in the defeat of Mr. Baldwin's policy, although the Unionist party remained the largest, but without a clear majority (Conservatives 28, Labour 1921, Liberals 186). After meeting Parliament in the following January Mr. Baldwin's Government was defeated by 228 votes to 256 on a Labour amendment to the address

On Jan. 22, 1924, J. Ramsay MacDonald, leader of the Labour party, formed the first Labour ministry, and although a minority in the House, subject to occasional reverses in the lobbies, Labour remained in office until the dissolution

in the following October,

The General Election of October 1924 was fought mainly on "Socialism or Anti-Socialism," tarlif questions being excluded for the time being. The Liberal party suffered severe reverses, Mr. Asquith being unseated, and the leadership of the party devolved upon Mr. Lloyd George. Mr. Baldwin became Prime Minister for the second time, with Winston Churchill as Chancellor of the Ecchequer, the House consisting of 432 Conservatives, 35 Labour, and 39 Liberals. The Conservatives remained in office until 1928, when a General Election, for the first time, returned Labour members as the largest single party (287) against 259 Conservatives and 59 Liberals.

In 1931, owing to disagreement in the Cabinet as to the method to be employed in restoring fluancial equilibrium and the balance of trade, Mr. MacDonald placed his resignation in His Majesty's hands (Aug. 23), and accepted office next day as Prime Minister of a National Government, with a Cabinet of so members, four of whom were Labour, four Conservative and two Liberal.

The change caused a definite cleavage in the Labour party, a small number following Mr. MacDonald, while the bulk of the party went into opposition under the leadership of Arthur Henderson, a member of Mr. MacDonald's cabinet in 1924 and 1929. Mr. Lloyd George was absent from Parliament through Ill-health but after negotations he declined to support the National Government. After carrying certain emergency measures through Parliament the National Government appealed to the country in October, 1921, the opposition consisting of the bulk of the Labour party, the official Liberals under Mr. Lloyd George, and other independents, including the New Party, under Sir Oswald Mosley, but a considerable number of Liberals formed the Liberal National Party under the leadership of Sir John Simon in support of the Prinne Minister.

There were 1,231 candidates for the 615 seats, made up of :--

For the National Government: National Labour (supporting Mr. MacDonald) 22; Conservatives 220; Liberal Nationals 40; Liberals (under Sir Hetbert Samuel) 86; Independent Nationals 2.

Against · Laboui (supporting Mr. Henderson) 513; Liberals (following Mr. Lloyd George) 34; Sir O. Mosley's party 24; Communists 25.

Women candidates numbered 62, of whom 21 were for the Government and 42 against

The election resulted in the return of the National Government by the largest majority ever known in the House of Commons, 497, made up as shown on p. 181.

Of the Ministers who resigned on Aug. 23, Lord Sankey (Lord Chancellor), Mr. Snowden (Exchequer) and Mr. Thomas (Dominious), joined Mr. MacDonald in the National Labour Party. At the General Election in October Mr. MacDonald (Seaham) and Mr. Thomas (Derby) were returned by their former Constituencies, while Mr. Snowden (Colne Valley) did not seek re-election. All other members of the Labour Cabinet of 1929-1931 were defeated, with the single exception of Mr. Lansbury (Bow and Bronley Division of Poplar).

The National Ministry was reconstructed on Nov. 5, further appointments being made during the month. In its final form the Ministry (see p. 169) numbered 64 (Cabinet 20, other Ministers 44), drawn from the different Parties as under:—

Party.	Cabinet Ministers	Other Ministers.	Total.
National Labour (MacDonald)		7	**
Conservative (Baldwin)		<b>25</b>	36 4
Liberal (Samuel)	4	9	23
Total	20	44	64

#### ALLOTMENTS FOR UNEMPLOYED.

Towards the end of 1930 a Committee was formed by the Government under the Chairmanship of Sir William A. Waterlow, Bart., K.B.R., to assist unemployed and partially unemployed men in obtaining and cultivating allotments. This plan was put forward not only for the economic value of their homes but also "in order to provide occupation for both mind and body, and to bring an interest into the lives of nous, and to ming an interest into the lives of those who, in these difficult times, may lose hope and spirit." The necessary statutory powers were later obtained under the Agri-cultural Land (Utilisation) Act, 1937. The pro-vision of the necessary land was the duty of the local authorities and them the transfer. local authorities, and it was their task to find out what land was available for cultivation as allotment-gardens, and what were the numbers of unemployed men and women who were likely to take advantage of any facilities which might be provided for them. In the areas of some authorities where successful efforts had already been made to seeme the cultivation of allotmentgardens by the uncomployed, there were in exist-ence Committees for maintaining and extending such cultivation. In these cases it was not necessary for new organizations to be set up, but where no such Committees were in existence Voluntary Committees were set up varying according to local needs and circumstances, but usually consisting of representatives of the District Council of Social Welfare and Local Trades Council, the manager of the local Labour Exchange, and the county Hortleultural Adviser. Each Voluntary Committee appointed a Secretary and a Chairman, whose flist task was to keep closely in touch with the Central Executive Committee which was set up by the Minister for the purpose of promoting generally the cultivation of allotment-gardens by the unemployed. Supplies of seeds, fertilisers, &c., were available at very low rates, but as supplies were restricted, and to prevent abuse, it was generally required that the financial status of the applicant was in accordance with the following scale. Total net weekly income after deducting expenditure on 1 ent and 1 ates not to exceed:—

Man and wife ... .... .. .... . ... 32×. Man and wife with a child ..... 278. Man and wife with a children. . . . . . . 308. Man and wife with a children .. . . 33%.

Man and wife with 4 childen or over ... 358
This assistance applied not only to unemployed or partly unemployed persons who alroady had allotment-gardens, but also to those persons to whom plots were newly provided. For approximately 6s, the following supplies could be ob-tained:—4 stones of special fertiliser, 4 stones of potatoes, and a special collection of 23 different kinds of garden seeds (or a smaller amount as selected by the member), while a spyle or fork was provided at r. each, and r cwt. of line was given free when specially recommended. For this outlay of 6r., therefore, a plot-holder had sufficient seeds to plant and cultivate a re-rod allotment. To assist the plot-holders further, it was arranged that payment for seeds could be made by instalments either weekly or as arranged by the Committee. It has been calchiated that by this means about 64,000 mem-ployed men throughout England and Wales have been assisted to grow their own 10-d; and in the Sheffield area alone, it was reported that in the Sheffield area alone, it was roported that Great Britain was taken on Surday, April 36, 2,38 men were working their allotments, and 1931, and 11 order to meet the more urgent

that at a cost of about £x,500 vegetables to an approximate value of £55,000 were being grown. It has now been announced by the Minister of Agriculture and Fisheries, however, that in Agriculture and risheries, however, that an consequence of the present national emergency, no financial assistance will be forthcoming in connection with this scheme for the 1932 cropping season.

#### CAPITAL PUNISHMENT.

THE Report of the Select Committee of the THE Report of the select committee of one House of Commons on Capital Pumshment appointed in December, 1920, was issued in December, 1930. The Committee stated that becember, 1930. The Committee stated that their investigations fully warranted a recommendation for the immediate passing of a Bill to provide for the abolition of the death penalty for an experimental period of five years in cases tried by civil courts in time of peace, and that in the meantime the House of Commons should pass a resolution declaring that the Home Secretary and the Secretary of State for Scotland should, in tendering advice as to the exercise of the Royal prerogative of mercy, recommend in each case the commutation of the death sentence, the penalty to be substituted being that now attached to reprieved murderers, interpreted and administered in the same way as at present. In the event, however, of Pailament deciding to maintoin the death penalty, alternative recom-mendations were made; the McNaghten Rules on the subject of insanity to be revised so as to give fuller scope to general medical considera-tions and to extend the area of criminal responsibility in the case of the mentally defective and insane; the death penalty to continue to apply to women on the same terms as men; as az is the age when full civil responsibility is assumed, no person below this age to be sentenced to death; a still larger exercise of the Royal prerogative to be made and, by means of a resolution of the House of Commons, the line that has come through precedent to mark the limit of its application to be raised. Amongst the statistics relating to capital crime given in the report it is stated that in 1929 the number of executions was almost the lowest on record, 7 for England and Wales, and none in Scotland, while the average for the whole country for the 10 years, persons have been executed in England and Wales and 257 reprieted, the corresponding figures for Septiand being 20 and 15 respectively. The value of the Report was scriously diminished by the fact that, of the z5 members of the Committee, the 6 Conservatives were so opposed to the report as drafted that, being denied the opportunity of preparing an alternative, they withdrew and took no further part in the proceedings. As, according to the practice of Select Committees, the Report was not signed and no minority report was possible, there was no means of ascertaining whether it represented the unammous opinion of the remaining members of the Committee, and in consequence it was criticised as lacking the anthority demanded by the nature of the subject Up to the present Pauliament has taken no further steps in the matter.

# THE CENSUS, 1931.

THE fourteenth census of the population of

purposes for which the results were awaited, a preliminary report dealing almost entirely with England and Wales was asued on July 6; the figures are provisional, but judging by past experience no material discrepancy is anticipated. The totals for 1921 are the largest hitherto recorded:—

ngat,	<b>2932.</b>	Incieuse (+) or Decrease(-).
England35,230,225 Wales 2,656,474	37,354,917 2,593,014	
37,886,699	39,947,931	+ 5'5%
Scotland 4,882,497	4,842,554	-0.8%

As regards England and Wales, the density is 685 persons per square mile, far higher than that of any other country recorded, with the possible exception of Belgium, and more than double those of a large majority of other countries. With the sole exception of the war decade, rgrr-ar, the numerical increase of a.ofx.aga is less than that of any decennium since 156x, and the percentage increase is only half or less than half of any previously recorded The comparative lowness of this increase is stated in the report to be wholly due to the enormous reduction in the number of births 1921-31, although marriage rates have been well maintained; the total births are 16:3 per cent. fewer than in 1911-21, which covered the war years, when the birth rate sank to a level lower than any before recorded, and are 25'4 per cent. less than the normal decennium roor-in; the full significance of the fall will be but dimly appreciated for many years to come. The present rate of 16'3 per x,000 is lower than in any country except Sweden, and is regarded as definitely insufficient to maintain a stationary population in the future, as the Registrar-General's estimate of the birth rate necessary to avoid a future decline in the population is about 19¹/₂ per thousand. A partial set-off against the decline in births is to be found in the death rate, which for the decade x921-31 is lower than any previously recorded rate; the reduction is more than xo per cent., which, if allowance be made for the increasing age and numbers of the population exposed to risk, represents a reduction in true mortality of more like so per cent. compared with zozz-az (excluding deaths on active service), or 30 per cent. compared with zooz-zz.

A further stage is recorded in the steadily increasing predominance of the urban as compared with the irrula element of the population, the proportion now being roughly so and so per cent. respectively as compared with yet and so in in year and yet and sight properties to the towns due to a drift from the countryside to the towns due to developing industries, but largely to the encroachment of urban upon rural areas consequent upon the natural development of the former. More than one-half of the total population is aggregated in comparatively dense units of \$0,000 and upwards, and one-quarter in the 13 largest towns (counting London as one) with populations exceeding 250,000. The Census figures indicate that development is concentrated primarily in the South-Eastern counties, and that the London area is growing at the expense not so much of rural areas as of the provincial towns, particularly those of South Wales and of the North of England.

The figures for Greater London, which com-

prise the County of London and the Outer Ring, and coincides with the area of the Metropolitan and City of London Police Districts, are as follows:—

١	zgaz.	2932.	Decrease (-).
	County of London 4,484,525 Outer Ring 2,995,678	4,396,8 3,805,9	97 + 27.0%
١	Greater London 7,480,201	8,202,8	18 +9.7%

It is considered that further time is required to prove whether the movement towards the metropolis, which has been somewhat precipitate, is more than a transient phase during the widespread industrial depression to be succeeded by an equally marked reaction if and when the older industries regain their former established positions.

Excluding the County of London, there are now xxx towns with populations exceeding 50,000 as compared with x00 in x0xx; the figures for the six largest towns are:—

	x92x	2932.	Increase.
Birmingham.	022,167	1,002,413	8.7%
Liverpool	805,046	855,539	6.3%
Manchester	735,774	766,333	4.2%
Sheffield	511,696	511,743	0.0%
Leeds	463, 122	48a,789	4.8%
Bristol	377,018	396,918	5'3"

The preponderance of females over males, which in rost rose as a direct result of the war, shows a decrease, but is nevertheless greater than in rost, the proportion to x,ooo males being x,o87 in rost, as compared with x,o96 in xpsx and x,o88 in xgsx.

The Census operations were handicapped by events and circumstances described at some length in the Report, and a complete enumeration only achieved by exceptional efforts, the authorities in face of very general demands for exclusive nerralitment of memployed labour were of opinion that compliance would have meant disaster, and their refusal was felt to be justified by subsequent experience; a careful and prudently conceived measure of resort to the unemployed, in the words of the Registrar-General, was, however, attempted, and the 40,016 enumerators for the x,770 registration subdistricts were composed as follows:—

12,704 Unemployed.

1,821 Civil Servants.

6,347 Local Authority officers or employees.
19,144 Other employed or retired persons.

A tribute is paid to the preparatory word of explanation by the Press, B.B.C. wireless talk, large industrial concerns, and instruction in elementary and other schools by the co-operation of the Board of Education, local education authorities and school teachers.

#### CIVIL SERVICE COMMISSION.

A DIFFICULT task was completed during regaby the Royal Commission on the Civil Service, which under the chairmanship of Lord Tomlin, examined nearly two hundred problems and in its report made a number of important recommendations. On the question of remuneration in the Service, the Commission found no support for the view that there had been a lowering in the standard of remuneration as compared with that in the community generally. The claim for a minimum wage of £3 ros. ed. a week was rejected, as was that suggesting that Civil servants should be regarded as "a highly selected class in each field of labour" and therefore treated better than their fellow countrymen. The Commissioners were satisfied that the present general standard of remuneration of Civil servants was reasonable in the light of the wage levels prevailing, but they recommended that the remuneration should cease to be varied automatically in accordance with changes in the cost-of-living figure and that the practice should he abandoned of attempting permalic comprehensive reviews of the remuneration of all nonindustrial Civil servants on the basis of a single formula. The majority of the Commissioners recommended that cost-of-living bonus should forthwith be consolidated with basic salary and that the bonus should meantime be considered at the then existing rate. A review consolidated rates should be made early in 1934, at the then existing rate. A review of the in their opinion, to consider what changes, if any, were necessary in the light of changes in general wage levels. They expressed the view that the fall in bonus had resulted in reductions which were felt most by adult Civil servants with pay, inclusive of bouns, not exceeding 70s. a week. The proposed consoludated rates would give £80 to those with a present salary of £77 10s. 60d. £128 for £125, and £125 for £122, above which the proposed rate would mean a small reduction. New future scales were also recommended, but in view of the economic attuation an immediate increase in salaries above £500 basic was not recarded as which were felt most by adult Civil servants above £500 basic was not regarded as practicable A few mmor changes in the methods of recruitment were proposed, and in general the system of promotion was regarded as satisfactory. In filling the higher posts in the Service, the Commissioners declared, merit should be the only consideration; in the middle langes merit should be the determining factor but in the lower ranges seniority and length of service would necessarily carry weight. Even in the lower ranges, however, steps were urged to ensure that exceptional ment should be rewarded ensure that exceptional methalical retrained to the Service generally," it was added, "the factor of seniority is unlikely to be undervalued, and we deprecate the exercise of any pressure designed. to stress the claims of seniority as against exceptional merit." The Commission considered the question of the employment of women in the Service and agreed that the object should be to secure for the State the advantage of the services of women wherever those services would best promote its interests. Speaking generally, the Commissioners held that the best course was to adopt the policy of "a fair field and no favour, but that rule must be subject to modificatious in certain areas of the Service. They were divided almost equally on the question of equal pay for women and a difference of opinion on the operation of the marriage bar was also recorded. A majority approved of the retention of the bar but agreed to some provision to meet objections as the large of apparent washing. tions as to the loss of experienced workers. Commission as a whole agreed that if a dis-cretionary power was to be adopted it should be a power which was capable of use. The view was expressed that the time had come when the practice of reserving temporary clerical posts to ex-Service personnel should be changed and that in future the main clerical classes should be recruited by open competition.

#### CONFERENCES.

WE are reaching a stage in the world's progress when the wisdom of "taking council together" is now widely acknowledged. Congresses and conferences are now the rule in almost every movement, profession and trade. A selective list follows, the choice being determined by their variety. Reference to many others will be found elsewhere in the ALMAKACK. A full list with due resumes of proceedings could not be compressed within the compass of this volume.

Int. Con. of the World Assn. for Adult Education, Vienna, Aug. 20-22, Mr. L. Tyson, U.S.A., President. B.C.C. and L.C.C. were officially

represented.

7th An. Convention of Advertising Association, Glasgow, June 20-24, Sir J. Gomer Berry, President. Delegates met to "re-examine functions of advertising in relation to trade, interpret its true value and unportance to the general public, consider means for maintaining its effective use, power, and adaptability to changed conditions. Lt Col. E F. Lawson, in reforring to lack of confidence in nation, said advertising was the means to remove that depressing influence.

19th Session, Int. Con. for Air Navigation, London, June z-6. Lt. (*O. F. C. Shehnerdine presided over representatives from 23 States. Matters dealt with included: Minhaum airworthiness certificates, new international maps with modification of signs used, new code for meteorological messages and methods for their communication, modification of night navigation lights, collection of details of cable obstructions, sanitary control of air navigation. Next session—May, *923, in Pans

British Commonwealth Education Con., London, July 24-30. Sir P. Nunn, President. Sir hundred delegates from Britain and Overseas Empire reviewed progress and needs in education to meet changing conditions of life within the Empire.

Int. Con. on Coal Mining Industry in Europe, London, Sept. 30-Oct. r. Mr Evan Williams (Mining Assn. Gt. Brit.), President Colliery owners sent representatives from Belgium, Czechoslovakin, France, Germany, Netherlands and Poland. Methods were sought for meeting the economic position of the coal industry; and representations was achieved, and this was to be remitted for consideration by national organisations.

rsth Int. Cotton Con., Paris, June. M. Laederich, Chairman. Present over-production, under consumption, loss of markets, rationalisation, passing of cotton spinning from Lancashire to Japan, failure of Britan to work double shifts in mills, trade restrictions, finding of new uses for cotton were meluded in the discussions.

and Triennial Con. of Empire Surveyors, Colonial Office, July. Methods of survey and issue of map discussed. Sir E. Dowson arranged 300 exhibits collected in mapping, photographing and surveying as a basis for a permanent exhibition. Empire Survey Review, recommended at 1938 Conference, made its first quarterly appearance in July 1922.

ance in July, 1931.

Empire Wool Con., Melbouine, June 28-24.
Sir G. Waddell (Chairman, Woolgrowers' Con.),
President. Great Britain, South Africa, New
Zealand, all Australian States were represented.
Five different stabilisation plans were produced
and rejected. Closer co-operation between
wool producing countries within Empire was

established for marketing with co-ordination in publicity and research. Australian and South African growers agreed to interchange of complete statistics and reports.

Int. Con. of Geography, Paris, Sept. 16-22.
Amount Soo delegates were official representatives from so Governments, including British War Office and S. Kens. Science Museum.

Int. Illumination Con., London, (Masgow, haffield, Cambridge, &c., Sept. 1-25. Mr. C. C. Sheffield, Cambridge, &c., Sept. z-ag. Mr. C. C. Paterson, President. Methods of lighting under all conditions discussed. British conditions somewhat criticised in being left to Local Authorities without any sense of national standardisation A month of floodlighting of public darinsation A month of mongaring of infinite buildings in London (Buckingham Palace, Victoria Memorial, Westminster Abbey and Tower, etc.) attracted huge crowds at nightly exhibitions. Many provincial towns had like displays including Dover Castle, Durham Cathe-dial and Hexham Abbey.

27th Meeting of Institute of International Lane (Founded: Ghent, 1873), Cambridge, Aug. 3-8. Prof. Pearce Higgins, President Discussions included mandates, minorities, navigation of livers, limit of state criminal julisdiction.

Inter-Parliamentary Commercial Con. was held in Prague, May. Sir J. S Allen, M.P. W. Derby, was Chairman of the British Empire Delegation Work of League of Nations, tariff walls and trade development were discussed, but decisions or opinions of delegates have no binding authority from individual Parliaments.

27th Con of Inter-Parliamentary Union, Bucharert, Oct 2-6, M. Lafontaine (Belgium). President Surplus production, tariffs, arma-ments were again topics. The Union draws its delegates from parliamentary bodies but its resolutions have no building force and are not recognised officially by Governments.

sons, however prepare the way for legislation 54h An. Con. Library Assn.. Cheltenham, Ang 32-Sept 3. Lt.-Col. J. M. Mitchell, Carnegie U. K. Trust, President. Dean Ingo influence on the configuration with discontinuous and the configuration of the configuration of the configuration. duced opening session with discussion on library services for hospital patients, Sir B. Bruce-Porter following with suggestion for nationally organised plan. Other debates viewed library

organised p'an. Other debates viewed library policy from all aspects.

Int.-Fed of Library Assus. Cheltenham, Aug. 29. M. Collign, Stockholm, President Dr. Bishop, Michigan, U.S. A, drew attention to absence in Bitain and U.S. A of any organisation for registering published works. Only books included in statistics were those for which copyright had been applied. Result was figures to other countries where exercise publics. figures for other countries where every publication had to be registered often exceeded those of Britain and U.S A.

and Int. Con. of Linguists, Geneva, Ang. 25-29, Pro. Chas. Bally, President. Discussions covered adoption of a recognised medium as an international artificial language, effects and influences on development of languages, origins (Sir R. Paget

dealt with gestural origin, phonetics and linguistics. Next congress will be in Rome, ro34.

zet Int Con. of Neurologists, Geneva and Berne, Aug. 3z-Sopt. 5. Professor Rachs (U.S.A.), President. A widesurvey of the relation between nerve force and life was made by Seo medical experts, sad Int. Orthodontic Con., London, July. (First held, New York, 2926.) Mr. J. H. Badock, President. Correction of teeth irregularities in children with subsequent prevention, thus benefiting health and altering shape of face. 15th Int. Con. of Navigation, Venice, Sept. 12-76. Signor Glurati, President. King of Raly attended opening meeting. 27 Int. Motor-Boat Meeting was held at same time.

set Int. Con. on Public Cleansing, London, July. Mr. J. C. Dawes, Ministry of Health, President. Various methods employed in town cleansing, sanitation, disposal of refuse.

zet Nat. Con. of Rhaldmnancy (divination by rods). Rome, March. Advantages that rhabdomancers could confer on agriculture were discussed Practical examples were given of divining metals and water supplies.

and Int. Con. of Science and Technology, London, June-July. Dr. C. Singer, President. Importance of science in teaching of history relation between biological and physical science; interdependence of pure and applied science

ist Imperial Sugar Cane Research Con., London, July. Conference was called by Empire Marketing Board to survey the scientific needs of the cane sugar industry of the British Empire.

4th (quinquennial) Con. of Universities of the An iguingueman Con. of Onteratices of the Empire. Opened by Prince of Wales, as Pre-sident, Guildhall, London, July 3. Seventy Universities were represented by 240 delegates Meetings began at Edinburgh, July 6. An official luncheon to welcome delegates was given by Government.

World Social Economic Con., Amsterdam, ugust Proposals put forward for stablisation Amenat Angust Proposal put forward for stabilisation of world industry by world scale application of principles of scientific business management; war debt moratorium for five years; maintenance of standards of living in advanced countries with levelling up of those in less

developed nations

17th Zonist Con , Basel, June 30-July 15. Dr. Weizman was officially President, but during his absence Mr. N. Sokolow acted and was elected new President Development of Jewish industry in Palestine with establishment of corporations in all countries under a single association to forward business was approved. Forces were to be mobilised to support the Palestine Foundation Fund. The Revisionists, who are opposed to Jewish Agency extensions suffered defeat for their proposal to terminate agreement between Zionists and non-Zionists. Congress resolved to support Government's land development scheme subject to absolute equality of Arabs and Jews.

yast An. Meeting of British Chambers of Com-merce was held in London April 23-4, Sir Walter Raine in Chair. Need for import duties on manufactured goods, re-consideration of expensive social services, and consideration of Russian trading methods were amongst accepted resolutions, but one objecting to the coupon system of trading was rejected

6th Bienmal Con. of International Chamber of Commerce took place at Washington, in May, President Hoover opening the assembly with a speech that suggested futility of co-operation between Europe and U.S.A. until the armament

problem had been surmounted.

#### CO-OPERATION.

THE essential feature of co-operation is the association of individuals, either as consumers to purchase goods or services for their own consumption, or as producers to market those of their own production. The object of co-operation is to cheapen commodities to the consumer

or to obtain a better selling price for the producer. Co-operative societies are registered under the Industrial and Provident Societies Acts, but to obtain registration under these Acts it is not essential for a society to be co-operative in character provided that it restricts the interest which any member may have or claim in its shares to £seo, and otherwise complies with the statutory requirements. In Great Britain, judged by its growth, the cooperation of consumers has been remarkably successful, but co-operation of producers comparatively slow and often a failure. A certain measure of production has been undertaken by the retail co-operative societies, and by the wholesale lmying agencies established by them. but such production is mostly an assembly of costly materials produced elsewhere into more finished products, and adventures into the more basic forms of industry, such as agriculture and mining, have not as a rule been attended with so much success There have been many proposals to link up the two lines along which cooperation is developing, and to make the one type of association serve the interests both of consumer and producer, but owing to the divergence of interest and the difficulty of arriving at a satisfactory and permanent hasis of adjust-ment, the efforts in this direction have as yet been in the main unsuccessful.

(a) Co-operation of Consumers .-- This form of co-operation in Great Britain has been based on an ideal, which in a large measure has been responsible for its successful development Co-operative trading societies are so con-stituted that interest on share capital is limited to a fixed rate and members' control is not increased in proportion to their shareholding After meeting interest on share capital, any surplus arising on trading is returned to the purchaser in proportion to the value of his purchases Frequently however, members do not exercise their right to withdraw in cash their share interest and dividends on purchases, but allow them to accumulate and so provide further working capital for the extension of the movement. In almost any year, societies as a whole, if they were able to alter their constitution and withhold dividends on purchases, could pay a so per cent, dividend on their share capital in addition to the customary fixed rate of interest of from 4-5 per cent. Moreover, reserves are continually piling up in the form of good-will with every extension of business. They are never distributed, but are handed down free of charge from one generation of co-operators to another. Co-operation among consumers thus grows steadily in spite of outside competition and industrial set-backs. In 1930 their we're 1,848 retail, 3 wholesale, and 68 productive t associations controlled by consumers. Sales of the retail societies totalled £216,327,000 and more than half these supplies were obtained from the wholesale societies whose sales at wholesale prices totalled £x04,346,000. by the productive societies amounted to only £3,483,000. These 1,319 consumers' societies had an aggregate membership of 6,372,000 or nau an aggregate membership of 6,372,000 or a39,000 more than in the preceding year, and capital (share and loan) and reserves of £30,675,000. The societies employed in all some 24,500 persons, and their total wages bill amounted to £33,914,000. The aggregate dis-

posable surplus for 1930 of the retail societies amounted to £35,715,000, out of which the fixed share interest charges absorbed £4,804,000, and dividends on sales £20,423,000, or about 12. 11d. in the £ on the retail sales. The following statement shows the productive output by the three classes of consumers' societies in Great Britain in 1930:—

-	Value of Productions (including Materials)	Cost of Materials used	No of Employees engaged	Salaries and Wages.
		- 1		! -
Food and To-	Æ	£		£
farm and damy	57.552,000	44.485,000	29,400	4,828,000
2 (Nothing and Textiles includ- ing boot mak ing and repairs	B,461,000	4 720,0co	25,900	2,822,000
3. Building, Wood ) working and Engineering	5,482,000	2 836,000	12 800	2,142,000
4. Other Indus-	8 x03,000	4 715 000	17,300	2,073,000
Total	79,600,000	56,806 000	85,400	zz,249,600

Of the goods distributed by the retail societies, still at most only one-seventh of the whole-sale value is created within the movement. In contrast to the volume of production undertaken by consumers societies, it may be mentioned that co-operation by producers (i.e. associations of workpeople comprising some 9,200 employees) were responsible in 1930 for productions valued at only £3,344,000 (including materials), and that three-fourths of this total represented clothing and textile goods.

(b) Cooperation in Agriculture.*—Societies engaged in agricultural co-operation fail into three groups. (c) Requirement societies, whose principal function is to supply their members withseeds, manures, implements, dairy utensils, &c.; (a) Produce societies whose chief object is to market members produce; and (2) Serme societies which supply some agriculture service, e.g., threshing. As will be seen from the following comparative statements for these three groups, agricultural co-operation in Gl. Britain, which showed signs of expansion during the war and immediate post-war years, has since declined, a decrease since ago of 24 per cont. in the number of trading societies (groups x and a) being secompanied by a define of 22 per cent. in membership. Many societies including some of the larger comby failmers' associations, bacon factories, and other societies engaged in the disposal of produce, have been compelled to wind up during the past few years, finding themselves in a hopelessly insolvent position, and consequently mable to obtain furtherworking capitation or credit. Many of the consiners' societies, too, have ceased to undertake fairning as an anxillary to their ordinary business. In the service societies, but there has since been a reduction

[†] Including laundries

* A few societies connected with fishing are included their transactions, however, were relatively very small.

and of is per cent. in the acreage under cultivation.

#### (1) REQUIREMENT SOCIETIES.

	Number of Societies.	Member- ship.	Sales.
1914	. 274	<b>29,603</b>	1,816,000
IQ80	. 667	¥¥5,553	13,260,000
1928	. 395	87,217	8,717,000
1989	. 374	85,484	8,482,000

This group in 1939 included 273 farmers' societies with 70,972 members. Their sales totalled £8,339,000 (including produce £908,000). The remaining societies membed in the figures for 1929 were in respect of associations of allotment holders for supplying their members with requisites. The particulars for 1914 and 1920 include also figures in respect of the Agricultural Wholesale Society, Ltd., which went into liquidation in roz4 with a deficiency of nearly £300,000.

#### (2) PRODUCE SOCIETIES.

Number of Societies.	Member- ship	Sales.
1914	10,401 45,688 38,078	936,000 8,803,000 7,143,000
1929 †291	39,959	7,480,000

The increase in the sales figure in 1929 was accounted for mainly by increases recorded by the Scottish Milk Agency, Ltd (£424,000), several newly-formed egg-marketing societies (£13,000), and a new farmers' abattoir in Scotland (£10,000), but these were partly offset by a decrease of £36,000 in sales by English Hon Growers, Ltd., a co-operative central selling agency established in 1935, which found it necessary to go into liquidation in 1930. The successful operations of the small group of 33 Scottish sheep stock clubs again call for mention in the depression which prevailed among agricultural societies generally in 1929. These societies returned the largest aggregate profit for any group of produce societies in 1929, and by the end of the year their accumulated reserves amounted to double their share capital.

The produce marketed by the 29x societies in 1929 was of the following descriptions and amounts:—

	England and Wales	Scotland
Milk and Daine Broducts	£	£

Milk and Dairy Products Hops, Fruit and Market	1,203,466	a,38a,739
Garden Produce Dead Meat Eggs and Poultry Wool Other Produce Fish	1,969,025 545,662 370,630 157,593 40,710 97,572	 167,250 85,040 174,848 44,545 30,314

£4,384,658 £2,884,736

#### (2) SERVICE SOCIETIES.

	(3)

1999	***************************************	849	165,590

† In addition 143 consumers' co-operative societies had farming and dairying departments, the value of whose produce amounted to £2 676.000

of nearly 14 per cent. in the number of societies | This group in 1939 included 666 associations whose objects are to provide their members with small holdings or allotments. The total membership for these associations was 140,085, of whom go, soo were tenants with about \$3,700

acres under cultivation.

Sales by all agricultural trading societies in Great Britain, including the agricultural produce of consumers' societies, totalled £17,538,000, societies in England and Wales disposing of requirements valued at £7,305,000, and produce £6,599,000, whilst societies in Scotland sold requirements valued at £479,000, and produce to

the value of £3,855,000.

(c) Co-operation in Housing.—The following table shows the phenomenal growth of the Building Society movement in Great Britain, the figures given relating to all so leties registered under the Building Societies Acts. The function of these societies is to assist their members in acquiring dwelling houses, business premises, &c., for occupation or investment, by making loans upon the security of a mortgage on the

propert	No of Members	Advanced during year	Total Mortgage
1914	. 627,240	8,762,000	61,050,000
1920	. 747,589	<b>\$5,095,000</b>	68,812,000
1929	. 1,265,329*	74,719,000	268,141,000
1930 .	1,449,432*	88,767,000	316,314,000

Building Societies are not wholly co-operative in character. It is true that to some extent they are managed by the borrowers, who them-selves provide a substantial part of the capital required for advances, but, at the same time, they are open to the membership of persons whose main concern is to find a profitable outlet for their capital. Further statistics relating to Building Societies and a list of the principal ones will be found on pp. 471-73. The above figures for Building Societies completely dwarf the operations of those societies registered under the Industrial and Provident Societies Acts which are connected in various ways with the provision of housing accommodation. As some of the societies registered under the latter Acts are not co-operative in character, and in many the tenants have no interestin the societies otherwise than as tenants, it would seem that co-operation among con-sumers generally (i.e. tenants) in the provision of housing has made no great headway. At the end of 1929 the 288 societies registered under the Industrial and Provident Societies Acts had sp.557 members, and capital (including loans and reserves) amounting to £13,462,000. Rents receivable by these societies aggregated £733,000 and resulted in a net profit of £65,000 after meeting them there in the reserve to the second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second secon ing share interest charges amounting to £40,000. A number of these societies have received State aid in the form of loans and subsidies. Of the various co-operative housing schemes, mention may be made of the Bournville Village Trust, which has been followed by a number of similar societies, and of societies promoted by colliery and railway companies. In the latter, estates are being developed by the Great Western and railway companies. In the latter, estates are being developed by the Great Western Railway Co. at Acton and Hayes. Mention may also be made of societies of a semi-philanthropic nature, such as those in Kensington, St. Pancras and Chelsea, which have recently been formed

O These figures represent the number of share investors. The number of depositors was returned at 428,000 and the number of borrowers 720,000 at the end of 1930.

for the conversion of slum property into blocks of residential flats; in the first mentioned the inclusive weekly rentals for flats ranging from 9s. 6d. for s rooms to x8s. 6d. for 4 rooms with addition of bathroom and senilery, with, in certain circumstances, a reduction in the rent by xs. per dependent child. A number of co-operative stores run building or mottgage departments, and are making headway. For example, the Bolton Co-operative Society, Ltd., which has assisted x3,000 of its members in house purchase, advanced a further £x30,000 in x320, while the Oldham Industrial Co-operative Society, Ltd., in the same year made further advances of £x02,000. In the south, x,258 houses had been completed by the Royal Areenal Co-operative Society, Ltd., on its Bostall estate up to the end of 1922

(d) Co-operation in Recreation. - Working men's clubs are registered under either the Friendly Societies Acts or the Industrial and Provident Societies Acts Most of the older Provident Societies Acts clubs were registered under the former Acts, but since ross a large number of clubs, par-ticularly those formed for ex-service men, have been registered as Industrial and Provident Societies. Under the two Acts there were 4,448 clubs at the end of rose and they had x,343,000 members. The income of these justitutions is mainly derived from sales of refreshments, which amounted to £20,448,000 in 1929, an average of about 22, of per member per week. The balance-sheet value of premises and furniture owned by the clubs was about £8,000,000, and their net balance of assets over all liabilities £3,700,000. The premises, etc., are usually acquired with the aid of loans, which are often obtained from local brewers, or in the ex-service men's clubs from the United Services Fund The older clubs have usually been able to repay their loans, but the newer clubs established for ex-service men are not required to make any periodical repayment to the United Services Fund of their loans, and do not ordinarily make any provision for repayment. In addition to social clubs, special authorities have been given by the Treasury for registration under the Friendly Societies Acts of societies whose object is the promotion of music or sports and games. The advantage of registering such ladies is either not generally known or is ignored, as only a few societies, such as brass bands or quoits clubs, have been registered.

(c) Co-operation in Intestment.—A few societies have been registered in the past under the Industrial and Provident Societies Acts with the object of enabling members to co-operate in the investment of their savings, but such societies were of relatively small importance until the advent of the First Co-operative Investment Trust, Ltd. Second, Third and Fourth Trusts have been formed under the same direction, and have received a large measure of public support. The early successes of these institutions led to the formation by other promoters of a number of trusts having similar objects and registered under the Industrial and Provident Societies Acts, but most of these have made little progress. The share capital of the original series of co-operative trusts at the end of their financial years in 1930, or early 1931, was "First," £1552,943; "Second," £1,165,826; "Third," £466,623; "Fourth," £69,214. The total number of share investors in these four trusts at the end

of 1930 was 43,546. The trusts have suffered heavily from the fall in market values of securities, but they contrived to maintain a dividend at the rate of 4 per cent. per annum for the second half of 1930, although their balance sheets showed their investments at values far in excess of market prices, against which their reserves, even in their entirety, offered but a very slender margin of cover. The excess of depreciation beyond reserves was nuch increased in 1930, and at the end of the year represented 50 per cent. of book values in the "First" and so per cent. in the "Second" Trusts. The "First" added about £13,000 to its reserves and undistributed profit for 1930, while the "Second" force upon its past reserves to the extent of about £8,000. These amounts, however, bore no comparison to the extent of the fall in value of investments suffered during the fall in value of investments suffered during the "First" and £20,000 in the "Second" The experience of the "Third" and "Fon. th" Trusts was similar, although the volume of their business was very much smaller. A notable feature of these four trusts is that about two-thirds of their investments are outside Great Britain, the Irish Free State, and the Britsh Dominions. In view of this distribution of investments and the changes which have taken place both in the value of sterling and securities, the balance sheets of these institutions for the second half of 1931

#### CO-PARTNERSHIP.

An account of Profit-sharing and Co-partnership in 1930, based on inquiries made by the Ministry of Labour, is given in the 'uniy, 1931, issue of the 'Ministry of Labour Gazette.' From this article, which relates to Great Britain and Northern Ireland, it appears that relatively small progress has been made in adapting schemes based on profit-sharing principles to industry. The total number of undertakings known to have schemes in operation at the end of 1930 was 491. The total number of workpeople employed by those undertakings was 503,000, and of these, 328,000 participated in the benefit of the schemes. Information was available as to the bonus paid under 422 schemes, and the average amount distributed per head was £9 188., and represented an average addition of 50 per cent. to earnings.

170 of the schemes were operated in conjunction with Co-operative societies. The industries on businesses with which the remaining schemes were in operation were as follows:—

		1
Industry or Business	No of Firms.	No of Work people Par- ticipating
Agriculture	6	300
Glass, chemicals, &c	17	32,900
Metal, engineering, &c	44	21,100
Textile	98	20,600
Food and drink	29	28,500
Paper, printing, &c	29	8,600
Gas, water and electricity .	69	47,500
Insurance, banking, &c	12	23,200
Merchants, warehousemen.	40	11,900
Miscellaneous	47	20,600
Total	321	205,200

The types of schemes comprise "Share Issue" schemes; "Deposit" schemes (where interest varying with profits is paid on employees' deposits; and schemes where (a) bonus is paid in cash or credited to a savings or deposit account; (b) bonus is retained in a provident, superannuation or similar fund; (c) bonus is paid in shares or invested in capital of undertaking; and (d) bonus is paid in other ways.

It will be gathered from the above particulars

It will be gathered from the above particulars that only a small proportion of workpeople are affected by profit-sharing schemes, and that the total amount distributed in bonus is a relatively small proportion of the total ware distribution.

small proportion of the total wage distribution.

The article includes a great deal of statistical and other detail as to the schemes in operation and those introduced or terminated in 1930, of which there were only 4 and 8 respectively.

#### COST OF LIVING.

RETAIL prices have not fallen to the same extent as costs of raw materials and imported goods. Labour in manufacture and merchandising has added considerably to prices, so that the consumers have not felt the benefit to anything approaching the full of the world-wide drop in price levels. If wheat shone determined the price of the loat, bread would have been cheaper than in Victorian times. Great Britain enjoyed a gradual fall in food prices thanks to the overproduction in the world, but the tide began to ebb with the gold standard change and the lowering of the £x value in the exchanges. Surplus from abroad will still assast in keeping prices on a lower grade, but the adverse exchanges must raise the prices of commodities since Britain depends so much upon imported foods. On July s. 1921, the Minister of Labour stated in the House of Commons that compared with July, 1914, weekly full-time wages showed an increase of 70 per cent, and hourly rates 92-95 per cent. Increase in consideration the average increase in real wages appeared to have been 17 in weekly and 30-35 per cent in hearly rates in the 27 years.

The following figures show official Ministry of Labour changes in living costs and in wages of

reporting industries :-

## CRIME IN LONDON.

IF London is any criterion for the whole of the country, crime is on the increase. In his report for his last full year of office, Lord Byng, the late Commissioner of the Metropolitan Police indicated that all classes of crime in the area showed a large increase during 1930, as compared with the preceding year. Indictable offences numbered 20,553 against 27,654 in 1929, and the latter figure was higher than in 1928. The number of persons proceeded against for these offences also showed a substantial inorease; the number was 13,000, while in 1900 it was 11,32. The number of murders was exceptionally low in 1909 (10), but in 1930 it rose again to the average number for the past so year (ax). In nine of these cases the murderer committed spicade; in one—the mirder of Agnes Kesson at Epsom—the murderer has not been traced. Ten arrests were made in connection with the other ix cases, and seven of the accused persons (one of whom had committed a double murder) were found insane. The other double murder) were found insane. The other three were acquitted, including two who were the survivors in suicide pacts. Manslaughter cases munibered at against 37, bigamy ros against 33, and blackmail 48 against so. The latter increase was attributed to the growing practice of permitting the suppression of the identity of the victums. The offences which involve the breaking into buildings—burylary, bouselpreak. breaking into buildings—burglary, housebreaking, shopbreaking and the like—accounted for a considerable part of the increase in indictable crimes. The figures for hurgiary were 35a, against a6s in 1939; housebreaking 2,865, against a6s; and breaking and entering buildings other than houses, x,yx, against 1,553. Lord Byng declared that much more could be done by the public to protect themselves. "The number of cases in which entry can be made without the use of any tool, and in which once entry has been made there is absolute freedom to 10am about the premises, is far too large. It cannot be too strongly emphasized that any precautions which make it more difficult to open doors and windows, and which are likely to cause trouble and delay, are well worth taking." He urged motorists to use garages instead of leaving cars unattended in the street, and said that a very large percentage of the motor vehicles reported stolen were recovered within a comparatively short time. Of 4,041 cars and son motor cycles reported stolen in the year, 4,759 and 407 were recovered. The opinion was expressed that the work of the mobile squad of the C.I.D, ensuring that patrols with wheless communication with headquarters were avail-able by day and night, had resulted in a large number of apprehensions, and there was every reason to believe that their existence was a considerable determent to crime As a result of redistribution measures, the force in many of the outer districts had been strengthened, but Lord Byng contended that these measures would not be sufficient fully to meet all requirements. Shortly after this contention was made public it was announced that the force would be increased by 400 men with the object of strengthening still further the protection in suburban areas.

#### DISARMAMENT.

Mr. HENDERSON (Foreign Secretary) asked House of Commons on March 9, 1921, to approve of chapters I-IV of the General Act for the Pacific Settlement of International Disputes. Parliament had given its approval on Jan. 27, 1230, to ratification of the Optional Clause and the General Act would complete Britain's acceptance of arbitration for non-justiciable disputes that the Permanent Court might not find a solution on legal grounds. On March es, the Franco-Italian Naval Agreement was published. Each might build two capital ships up to 23,333 tons with 12-in, guns up to Dec. 27, 1355, subject to scrapping a battleship for each new one; capital Counage for each to be raised to 25,000, as a sgainst 173,000 in Washington Agreement; each might complete alrevalt carriers up to 34,000 tons, giving due notice of intentions; no fur their laying down of cruisers of nore than 5's-in. gun class; limitation of smaller cruisers and submarines to maximum replaceable before 1336. Experts from Britain, France and Italy continued an exchange of naval views following the agreement.

M. Briand's scheme of a Federated Union of Europe with a separate organisation was dropped by the Preliminary Commission of the League in its report of Mar. as, but it became evident that delegates were divided between economic action and political co-operation. An important step taken was to invite Soviet Russia and Turkey to take part in the further deliberations. In the Aug, meetings of the Commission of Enquiry, a report from a sub-committee of economic experts stated the definite aim must be the "widest collaboration of the nations of Europe in the sense of making Europe a single market for the products of any and every country in it." At the final meeting of the Commission on Sept. 6 it was decided to ask for another Committee to consider a proposal from Russia for an Economic Pact of Non-Aggression. Meantime a recommendation was being sent to the League Ior its Economic Committee to pursue the questions raised.

The rath Assembly of the League of Nations (M. Itulescu of Rumania re-elected President) met at Geneva Sept. 7. Signor Grandi suggested a real truce of armaments until Dearmament Conference had completed its work. M. Buland insisted on comprehensive assu ances before real disarmament. Dr. Curtius raised the plea of the alternative of security coming from disarmament, not vice versa. Lord Cecil suggested asking all Governments to state before Nov. whether they were in favour of a truce. The U.S.A. would accept the tune for its psychological effect in spite of embarrassment of American shipbuilding. Japan preferred to leave question over to the Conference.

With a view to preparing the ground for the Disarmament Conference that is to be held at Geneva in February, 1932, Mr. MacDouald, Mr. Baldwin and Mr. Lloyd George spoke at a demonstration at Albert Hall, London, on July 11. The League has been collecting full service details from all Powers in view of the furthcoming Conference.

DEUG TRAFFIO.

Wonld Conference for the Limitation of the Manufacture of Narcotic Drugs opened at Geneva on May 27, 1932, under presidency of M. de Brouckere (Beigium). The hope of the delegates was in the developing of an agreement by which the manufacture of narcotic drugs could be limited to the medical and scientific needs of the world. A Russian proposal was in favour of the creation of State monopoles in the manufacture and sale of drugs. A scheme that limited manu-

facture to determined quotas found favour, but had to be dropped owing to disagreement by Turkey and Yugoslavia and Janan's preference to an equal quota for every manufacturing country. Only Great Britain stood out against complete prohibition of heroin; a compromise was accepted that heroin should be exported only to Governments. The ultimately agreed Convention stipulated that countries should estimate the quantity required yearly for medical and scientific purposes, and not manufacture more than necessary to meet orders and maintain stocks. Any excess production one year is to be debited against next year's figures. No new product from coca leaf or opium is to be undertaken unless the Government of the country in which discovery of compound is made is satisfied that it is of medical and scientific use; further, no export business is to be done until the Mealth Committee of the League of Nations has expressed an opinion of its addiction properties. The Convention applies to cocame, codeline, dionin, heroin, morphine and peronin. The operation of the agreement depends upon ratification by the countries concerned, but as States signed the Convention on July 3, when the Conference concluded The British Government's Report for 1930 on the Hiliert Drug Traffic stated that no large seizures had taken place at home, but abroad, especially in India, there was hardly any diminution in illicit drug truffic. The continued illicit traffic in cocaine from the Far East gave much concern.

# EX-SERVICEMEN'S ORGANISATIONS. BRITISH LEGION.

TRNTH Anniversary of founding of British Legion was suitably celebrated on July x, 1931, and following Sunday. The B.L. had been formed in xor by amalgamation of four existing ex-Serv cemen's societies, a constitution being accepted at the Whitsmittle Conference of that The Royal Charter followed in zong. The B.L. is now represented in nearly every part of S.L. is now represented in nearly every gaze of Great Birtain and Ireland, with \$,65g branches, and overseas with 5z branches. The Women's Section has z,zgo branches. It was smoomeed on May z4, that as a result of the Prince of Wales's Legion Book Fund, the sum of £zz2,000 had become available for distribution. Of this, nine allocations amounting to £34.500 were made to various ex-Service organisations, and the balance employed in establishing a Pension Fund, the income from which would be used in augmenting official pensions or helping nonpensioners of so years of age and upwards.

Annual Conference of B L. was held at Queen's
Hall, London, May 34-35 In view of 304 motions being on agenda, four committees were formed in hope of considering most of them. Resolu-tions included—Greater use of Remembrance Day as title in place of old Armistice Day for Nov. xx; No lessening of customary observance of that day; Poppy Day to be maintained then; one to provide a wider distribution of the Poppy Day receipts (now restricted to members who served in Great War) was defeated. Prince of Wa'es opened the London Group of Haig Homes at Morden, on May so. He had made an appeal for these three years earlier. There are say houses for disabled mon and adjacent are 68 for disabled officers, these being provided by Housing Association for Officers' Families. The Poppy Day Collection of 1930 amounted to £524,650 from all sources, an increase of £6,160 52. 7d. over 1989. Popples cost 16 per cent. of income to make, giving work through the year to 276 disabled ex-Servicemen in B.L.'s factory; other cost of collection was a per cent.

of income.

Women's Section of B.L.—Duchess of York honoured Annual Conference at Kingsway Hall, London, April 24, with her presence. Lady E. Spencer-Churchill was Chairman. Haig Cup was won by Maldstone and Thrapston Branches. Lady Haig thanked Conference for passing a resolution calling upon First Commissioner of

Works to secure new design for Haig Statue.

Officers' Association.—This is Officers' Dept. of B.L Expenditure on relief, Feb. x, xgao, to Sept. 30, 1930, £x,8a,475. School fees were paid for x,xgo children in xggo. King's Roll.—Officially amounced in House of

Commons, Feb. 26, that on Jan. 1, 1931, 25,908 employers were on the K.R., employment being given to 371,792 disabled persons. The K.R. National Council, at meeting of June 30, stated that 738 local authorities had agreed to give a preference to firms on King's Roll.

F.1.D.A.C.—Twelfth Annual Conference of the Federation Interalliée des Anciens Combattants

met at Prague, Sept. 1931.

United Services Fund.—In year ended Sept. 30, 1930, 105,859, cases were relieved at a cost of £379,79, making a total of £5,786,05s in eleven years. Fund worked in co-operation with the B.L.

National Association for Employment of Regular Sailors, Soldiers and Arrinen.—Meeting held June 8, 1931, announced 17,851 men had been placed in employment in past year, an increase of 370 over previous year.

Incorporated Soldiers' and Sailors' Help

Society.—In year, 39,319 applications (increase of 2,280) received. Sales from Lord Roberts' Workshops, £126,000 (average disability of employees.

6a per cent.).

British Empire Service League.—Fifth Blenmilal Conference held at Torouto, Sept. 3, 1931, Lord Jellicoe presiding. Amongst resolutions passed was one urging Bitish Government to obviate unrestricted importation of Russian goods in the interests of the Dominions.

In Hospital.-Numbers of war disabled men are still in hospital. Their interests are being watched and entertainments being organised by many voluntary bodies, of whom mention can be made of the Not Forgotten and Lest We Forget Associations.

FINANCE AND INDUSTRY.

THE Committee on Finance and Industry, appointed in November, 1929, under the chair-nanship of the Rt. Hon. H. P. (now Lord) Macmillan, presented its report in June, 1933, signed by all the members except Lord Bradbury, whose memorandum of dissent was appended. t gether with addenda by other members. The report, which covers more than 300 pages, is in two parts, the first being historical and descrip-tive, the second giving the Committee's con-clusions and recommendations and, in view of the diversity of the schools of thought on monetary problems represented by the members, the degree of unanimity is impressive. Owing to the wide scope of the report and the complexity of the subject it is only possible in these columns to outline briefly some of the more important findings and suggestions. The economic difficulties of the post-war decade were considered by the Committee to be due, not to any wanton misbehaviour on the part of the monetary factors themselves, but to unusually large and rapid May 9-Aug. s; this was in connection with

changes on the part of non-monetary phenomena viz: (i) unusual instability in the demand for capital, (ii) war debts, (iii) the rapidity of techni-cal changes in manufacture and agriculture, (iv) the shifting character of demand, (v) the rigidity of wage rates, (vi) the growth of tariffs, (vii) embarrassment of Budgets and (viii) violent (vii) embarrassment of Budgets and (viii) violent change in speculative activity in New York and elsewhere. The recent world-wide fall in prices is therefore best described as a monetary phenomenon which has occurred as the result of the monetary system failing to solve successfully a problem of unprecedented difficulty and complexity set it by a conjunction of highly intractable non-monetary phenomena. Stress is laid upon two dangerous defects in the recent working of the interretional gold standard, the ing of the international gold standard, the excessive rigidity of the reserve requirements of the Central Banks and the maldistribution of the Central Banks and the mainistribution or gold throughout the world. The disturbing factors, monetary and non-monetary, which prevent the satisfactory automatic working of the gold standard render it necessary that it should be "managed" and this can only be achieved by the international co-operation of the Central Banks whose main objectives should be to raise the world price level, i.e. to lower the international value of gold in terms of wholesale commodities and, after prices have been sufficiently raised, to maintain a stability of prices at the higher level. To deal with the emergency as it existed during the life of the Committee, creditor countries were urged both to buy and lend more freely and Central Banks and Treasuries to remove hindrances to the reception of foreign loans and also to permit a volume of domestic credit which would encourage the market to take full advantage of any foreign issues deemed attractive. As regards Great Britain, while the Committee were not in agree-ment as to whether the return to the gold standard in 1925 was right, they were unanimous in advocating continued adherence and in re-pudiating a devaluation of the currency, but subsequent events rendered impossible the policy advocated. The Bank of England is recommended as the authority for "managing" the currency, and some important changes are suggested to strengthen its position by means of an increase in capital and in the cash balances deposited by the joint stock banks; the maximum fiduciary issue should also be increased from the existing £350,000,000 to £400,000,000, subject to modification by law from time to time; the gold reserve should not fall below a statutory minimum of £75,000,000, except temporarily by permission of the Treasury. Closer co-operation between finance and industry is regarded by the Committee as necessary, and a further development of transfel corrections in the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the ment of financial organisation is suggested by means of institutions to act as financial advisers means of institutions to act as financial advisers to industrial companies and to carry out all types of financing business; the Bankers Industrial Development Company is recommended as a suitable nucleus, and for this purpose should be separated from the Bank of England, have an independent existence, and rely upon its profit-making capacity as a private institution. It must be borne in mind that the report was issued before the suspension of the cold standard in Great Britain. gold standard in Great Britain. FOREIGN FAIRS.

EXHIBITIONS and Fairs held abroad in 1931 included:—Berlin, German Building Exhibition,

International Town Planning and Housing display. Florence, first National Fair of Arts and Crafts opened March as, included 900 exhibitors of Italian productions. Gothenburg, 14th Swedish Industries Fair held May 9-27, at which 1,000 national concerns were represented; construction and furnishing of houses especially featured. Leipzig, opened March 1, was on hig German national lines with cheapness being a characteristic. The Leipzig Autumn Fair was held Aug. 30-89t. 3. Lyons, International Fair, March 3-15, comprised some 6,000 exhibits, in which machinery, furnishing, building predominated. Parts, Colonial Exhibition first planned in 1914, fixed for 1919, and postponed until May-0ct. 1931. British Dominions were represented, and Duke and Duchess of York paid official visity 1y1-27-9. Netherlands Pavilion was burnt down June 27; a new one was built and opened Aug. 28. Exhibition cost approximately £3,250,000, this being raised mainly by lottery bonds. Stockholm, International Aircraft Exhibition was held in May. Vienna, Spring Fair of March 8-15 attracted a large number of foreign exhibitors. Preparations are in hand for the 1913 Century of Progress Exposition to be held at Chicago, but nothing is doing in the way of a bug British Exhibition as a means for attracting foreign visitors and developing trade. A Leonn Fair will be held at Tel-Aviv in April, 1932, under patronage of High Commissioner of Palestine. An International Exhibition will be held in Brussels in 1935—50th anniversary of Belgian Congo foundation and 200th of first continental railway.

#### GREYHOUND RACING.

LORD BRENTFURD, as Home Secretary, stated on Nov. 27, 1928, that "next year the sport will be almost at an end." This prediction has been entirely reversed in experience, with so, coo and more people attending nightly single tracks in London. On Saturdays, five or six meetings operate in the Metropolitan area. Most of the big elties in the Provinces have their tracks. Total visitors to dog racing far exceed numbers for horse racing. Every London track will have a totalisator in full operation to compete with the large number of bookmakers who derive excellent incomes from betting on the spot. The development of the sport can be appreciated from the recent construction of training kennels for 600 dogs at Northaw, mainly for racing at Wembley. A world's record was made at Brighton on Aug. 29, 1931, by Sannny's Adventure of 263 yards in 326 secs. Mick the willner is possibly London's most popular dog-his winning stakes exceed £7,500 in three seasons. The champlon dog is probably Future Cutlet, winner of the Laurels Stakes worth £1,320 at Wimbledon on Sept. 12, 1931, when making record time of 252 secs. for 500 yards.

# THE IMPERIAL CONFERENCE

It had been intended that the work of the Imperial Conference of 1930 should be continued by a meeting of the Economic Section at Ottawa last autumn, but owing to the world situation this was postponed, it being announced when the new Parliament opened that the meeting would take place in 1932. Before the Loudon gatherings concluded, an important statement of the British Government's economic policy was made to the Conference, but whether this has since been modified by the change of Government or the altered conditions is not known.

The statement by the British Government ruled out any question of extending existing preferences. It declared that the interests of the United Kingdom precluded an economic policy which would injure its foreign trade or add to the burdens of the people; but that their fiscal policy did not preclude marketing propaganda and organisation which would secure valuable opportunities for the consumption of Dominion products in the United Kingdom. The British Government also declared that the existing preferential margins accorded to other parts of the Empire would not be reduced for three years, or pending the outcome of the Ottawa Conference, subject to the right of the British Parliament to fix the Budget from year to year No decision was reached on the questions of a quota, bulk purchase and import boards, but the British Government undertook to examine carefully the report of the Committee on a wheat quota in consultation with the Governments of the wheat growing Dominions, and of India. Reports on quotas for other commodities and on import loards, bulk purchase schemes, and the organisation of channels of trade were referred to the Governments concerned for consideration. It was agreed that the Imperial Economic Committee should continue its work, and should complete the investigations into the marketing of Empire foodstuffs in the United Kingdom; and the extension of the Empire Marketing Board was recommended. It was decided to ask the B.B.C. to obtain views regarding the institution of an Empire Broadcasting Service, which the Conference considered would strengthen the ties of Empire, and tend to stimulate trade. The B.B.C later announced that after consultations with the Dominions and Colonies concerned, they intended to proceed without delay to build an Empire Broadcasting Station at Daventry, which would give a 24 hours' service to all parts of the Empire. The policy of the ultimate establishment of a defended naval base at Singapore was maintained, the existing contact being continued, but expenditure required for completing the equip-ment of the docks and for defence works was postponed for five years, when the matter is to be reviewed. Another decision permitted the Dominions to recommend to the King advice regarding the appointment of Governors-General, and it was agreed that legislation, to be called the Statute of Westminster, should be brought forward in the Imperial Parliament to implement the report of the Conference on the Operation of Dominion Legislation after the Dominion Parliaments had passed the necessary resolutions on the subject. This measure, de-signed to make clear the power of Dominion Parliaments and to promote the spirit of free co-operation among members of the British Commonwealth of Nations, was the only legislation definitely indicated in the King's Speech when the New Parliament was opened.

# INSURANCE.

Voluntary.
(a) Industrial.

Under the Industrial Assurance Act, 1923, "industrial assurance business" is, in the main, restricted to assurances on luman life in respect of which weekly premiums are received by means of collectors; but here, under this head, is surveyed the whole field of what might be described as Voluntary Working Class Insurance.

From the table appended below it will be seen that the principal types of association which cater for the insurance of the working classes are responsible for about 92,000,000 assurances; and in view of the magnitude of this number, it is obvious that the same individual must be frequently insured in more than one institution. The most popular type of insurance undertaken is insurance against death, and the undertaken is insurance against death, and the claims met on this benefit alone exceed £77,000,000 a year. Sickness benefit to the amount of £6,000,000 a year is still disbursed from the voluntary funds of Friendly Soutelles and Trade Unions. The total funds of the undertakings included in the table exceed-£375,000,000.

In illustration of the magnitude of industrial assurances the Commissioner has pointed out that the number of assurances is one and a half times the whole population and the total sum assured is equivalent to nearly one-sixth of the

National Debt.

Many friendly society officials are becoming perturbed at the increasing cost of sickness benefit, particularly in respect of members at the lower ages who have been admitted within the last few years. A number of societies have already adopted what is known as the "indi-vidual account" system to remedy matters, and others are considering its adoption. The main principle of the system is that surplus funds are allocated to members' individual accounts, and claims for benefit are not partly from the common fund and partly from the number's individual account. It is maintained that a very much lighter rate of sickness claims prevails under this system. The individual account also provides a fund which may be drawn upon at an attained age or in certain emergencies, and is thus in some respects similar to the endowment insurance undertaken by industrial assurance companies and collecting societies, which, in 1930, met claims on maturity of £6,520,000.

In trade umons the most disqueting feature of benefit expenditure is the rising cost of superannuation benefit

As a result of Industrial Assurance Legislation. companies and societies now have to meet an increasingly heavy charge for surrender values. Since the Industrial Insurance Act of 1923, the amount has risen from £x,x8x,000 to £4,859,000. Surrender value payments are included as benefits in the following table:—

-	Year	Number	Membership	Friendly Swifety Benefits	Funds at end of Year
	-	-	000 B	£oon's	£000's
Friendly Bocieties	<b>192</b> 9	ar,553	\$7.5 <b>8</b> 6	\$20,500	\$204,060
Trade {	<b>198</b> 9	472	3,779	† 1 <b>2</b> ,333	II 361
Collecting Societies	1930	151	18,126	4:804	47.183
Assurance Companies	1930	27	62,029	a1,950	417,324

The Post Office undertakes a small amount of iffe assurance business, which is not included above. The number of new assurances effected in ress was 5s, for a total amount of £3,85a; and in the same year the receipts in respect of all such contracts (i.e., premiums) amounted to only £18,030, and the claims on Peath and Surrender to £27,430 in respect of 528 contracts.

Both the Post Office and the National Debt.

Office (in conjunction with Trustee Savings Banks) undertake Aunuity business. The receipts in respect of such business were for the Post Office, 1929, £359,131; and the National Debt Office (and Banks) 1929, £307,024.

## (b) Ordinary.

The Ordinary business (as distinct from "Industrial" business included above) of Life Assurance Companies may be summarised as follows .-

(1) Life Assurance Companies established in the United Kingdom (U.K. business only)
(ii) Do. (business out of the U.K.).

(iii) Do. established one of the U.K. (business in the U.K. only).

		(i)	(ii)	(iii)
Premiums and con- sideration for an- nuities.	1928 1929	£000'8 71,303 73,075		
Claims	1928 1929	45,170 47,071	3,143. 3,400	1,935 2,193

#### State Insurance.

Health .- The numbers of persons entitled to Health.—The numbers of persons entitled to benefit in Great Britain in 293 were: Men, 11,255,000; women, 5,757,000 The contributions of employers and workpeople amounted to 5,053,000, to which State grants added 5,7324,000, and Interest, &c., on funds 5,554,000. The total of benefits disbursed was 5,25,050,000. Fuller details will be found in the table on

p. 569.
Unemployment.—This branch of State insurance has been dealt with specially this year on

ance has been dealt with specially this year on pp. 5/8-9.

Widows' and Orphans' and Old Age Pensions Insurance—The Widows' and Orphans and Old Age Contributory Pensions Act, 2559, modified the provisions of the Act of 2569, and came into operation on Jan. 2, 2569. Under its provisions wives of hisured men, who reached 25 before the introduction of the 65-20 old age pension in January, 2558, were given the right to the 65-20 pension. The main provision of the Act giving pensions to elderly widows did not operate until July, 2530. The following particulars relate to Great Britain.

In addition to the contributories for Health

In addition to the contributories for Health Insurance, who were also insured for pensions, ag3,300 persons were turned for pensions only at

o Industrial Business only.

Registered Unions of employees only.

Based partially on estimated figures

Not including £976.000 dishursed from union funds
in unemployment benefit, and £598.000 in dispute pay.

the end of 1930. The benefits diabursed in that year were: Widows, £26,48,000; Orphans, £26,500; and Old Age Pensitons, £76,38,000. Fuller details will be found in the table on p 568. Since the Contributory Pensions Act, 1923, in all £39,688,000 has been paid in pensions during \$3,05,050,000 nas been paid in pensions during the quinquennium 1956-30, consisting of \$30,745,000 (widows); £1,605,000 (orphans), and £17,343,000 (vid age).

Apart from the contributory scheme £34,050,000 was disbursed by the State in non-contributory Old Age Pensions and £53,423,000

in War Pensions in 1030

## THE KING'S ECONOMIES.

THE King gave a striking lead to the country in the direction of economy shortly after the formation of the National Government, and before the revelation of its plans for reducing expenditure. In a letter to Mr. Ramsay MacDonald, the Keeper of the Privy Purse announced that in the grave financial situation with which the country was confronted, the King wished personally to participate in the movement for the reduction of national expenditure, and had decided that his Civil List should be reduced by £50,000 while the emergency lasted. When it is recalled that the full gency lasted. When it is recaised that the initial sum paid by the State as a provision for the honour and dignity of the Crown is only £420,000, of which £120,000 is applied to their Majesties Privy Pure, the extent of this sacrifice by the King can be appreciated. In his letter to the Prime Minister, Sir Frederick Ponsonby said: "When, after the War, owing to the increasing cost of living and fall in the purchasing power of money, the Civil List settled by Parliament in 1910 was found to be quite inadequate, drastic economies were made, and therefore it is not easy to reduce the ('ivil List further without sacrificing some of the State functions which are traditionally associated with the Monarchy, and without throwing numbers of his Majesty's servants out of work careful consideration, however, the King has arrived at the conclusion that by the exercise of the most rigid economy it should be possible to reduce the Civil List by £50,000." It was also intimated that the Queen and the other members of the Royal Family in receipt of Parliamentary grants were all desirous that reductions of these grants should be made during the national crisis The annuities granted by Parliament to the other members of the Royal Family were about £100,000 The King's lead was quickly followed. The Prince of Wales, for whom no provision was made in the Civil List, because he receives the income of the Duchy of Cornwall estates, amounced his intention to contribute £10,000 to the Exchequel. When the emergency Budget was introduced, the Chancellor gency Budget was introduced, the Chancellor gave some remarkable examples of the wide-spread desire to help the nation. Old age pensioners had returned their pension books, war pensioners had offered to forgo their pension for the year, National War Savings Certificates had been returned cancelled, ord-lections had been made and War Loan bonds had been sent for cancellation. Many gifts of cash were also sent to the Treasure and for cash were also sent to the Treasury, and for some weeks after the position was made plain the Ministry of Pensions received daily letters from all classes of war pensioners expressing their intention to resign the whole or a portion of their pensions, either for a period or in per- not appear to have a wide sale.

petuity. Another kind of ascrifice was provided by the B.B.C., which agreed to forgo out of the revenue derived from wireless licences £50,000 for 1931, and £150,000 for 1932.

#### THE LABOUR PARTY.

FINANCE has been the problem with the Labour Party. The Annual Report issued at the Scar-borough Conference, Oct. 5-8, 1935, Mr S. Hirst, Chairman, mentioned that unless fresh means were forthcoming for raising funds for fighting bye-elections it would be essential to refrain from action in many cases. The year's income from action in many cases. The years moonie for raga amounted to £44,927, of which the special levy of ad. a member, spread over three years as decided by the rags Conference, produced £9,48 There had been 475,Labour candidates endorsed for the next election. The Contest of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the conference of the con terence coincided with the final days of Parlisment, and so proceedings took a platform aspect m view of the forthcoming clash in the constituencies The rejection of Mr J McGovern as an authorised candidate, as proposed by Executive, was continued. A discussion on the Indian problem was avoided by 1,500,000 to 671,000. The I.L.P. delegates objected to the instruction that M P.s should act in harmony with the standing orders of the Parhamentary Party, but the Conference supported obedience to orders by 2,127,500 to 203,000. Resolutions maintaining Socialism as the cure for human evils, cancellation of all war debts, public control of hanks with a National Investment Board, vigorous trade union policy with public ownership of public utilities plus an Import Board, dealing with imports produced under bad conditions, public ownership of land, full self-government for India, restoration of economy cuts for teachers, social services and unemployed, were passed with-out division after discussion. The Labour Party has been associated closely with the Trade Union Congress as usual, the two bodies being jointly responsible for a manifesto on Aug 27, 1931, against the newly-formed National Government. The Trade Unions (Amendment) Bill No. 77, that would have materially assisted the Labour Party in that it restored contracting-out for the political levy, did not become an Act, though a Government Eill. A Conference of Labour Women held at Blackpool in July, 1931, 1sjected a proposal for the public ownership of the liquor trade The Pope's Encyclical, issued on May 23, 1931, contained the sentence "No one can be a good Catholic and at the same time a true Socialist." The fourth Congress of the Labour and Socialist International at Vienna. August, considered anti-war policy most important task.

#### COMMUNISM

Communism makes very little progress in Britan Mr. H. Pollitt admitted at the zzth plenum of the E.C.C I. that the membership of the Communist Party in Great Britain was only 2,711, 53 per cent. were memployed and as per cent in the Minority Movement. In July, the Amalgamated Engineering Union expelled from its membership 13, some branch officers, who were considered to be supporting the Communist Party contrary to the rules of the Union. The Party has a newspaper mainly circulating in London known as the Dauty Worker, but it does

#### ENGINEERS.

In Dec., 1939, the Engineering and Allied Employers' National Federation invited the forty trade unions in the industry to discuss the whole wages question in view of grave position in trade. Negotiations went on to June 3, when an ultimatum was issued by the employers. Further meetings by trade unions led to acceptance of new terms to operate from July 6. These did not affect ordinary wages but varied plece rates, overtime, night rates and shifts. Annual Conference of Amalgamated Engineering Union took place at Blackpool May 38-39, Mr. W. H. Hutchinson presiding. It was decided to agitate for a 4c-hour week and attempt the limitation of newcomers in industry; the Labour Government came in for criticism. Several members were expelled from A.E.U. for supporting the Minority movement. Industry is free from strikes, but a quarter of the workers are unemployed.

#### I.L.P.

Mr. J. Maxton, M.P., presided over 39th Annual Conference of 267 delegates from branches of the Independent Labour Party at Scarborough, April 5-7, 1931. A proposal for I.L.P. to disaffiliate from Labour Party was defeated 173 to 37, as was motion expressing dissatisfaction with lead given by executive, 157 to 109. A national planning commission to examine and plan control of country's resources was accepted, zas to 99. A non-contributory unemployment insurance with considerable extensions received unanimous accord. Discussions took place on India, national finance and kindred subjects, but the majority of resolutions on the agenda were never reached. Mr. Maxton on the agenda were never reached. Mr. Maxton repudiated the Party headed by Sir O. Mosley, membership of L.L.P. being incompatible with that of Mosley Party. Between Communists and L.L.P. it was a question of tactics and not of principle. Mr. F. Brockway, M.P., was elected new Chairman, Mr. Maxton retiring after five years' service. Several M.P.'s resigned membership during vaer. The J.L.P. group of membership during year. The L.L.P. group of M.P.'s often came into antagonism with Labour M.P. 8 often came into antagonism with Labour Government, and, to a request for a statement on the position, the Secretary (Mr. J. Paton) of the I.L.P. wrote Mr. A. Henderson, M.P., that his connell "cannot give unqualified assent to standing orders of the kind it is now sought to impose, and which are contrary to the estab-lished practice and relations of the two parties." The I.L.P. naturally went into opposition against National Government. Scottish 1.L.P. Annual Conference was held at (flasgow, Jan. 20-12, Mr. P. J. Dollan being in the chair. A motion to disafiliate I.L.P. from Labour Party was defeated. Welsh I.L.P. Annual Conference met at Treharris, Glam., July 22-22, Mr. J. L. Adkin presiding. Opinions were expressed that I.L.P. should secure more independence within Labour Party, additional taxation should be levied on incomes in excess of £500 per annum, and that following the Unemployment Royal Commission the conditions of the unemployed should not be worsened. Under the auspices of Labour Party members, a new organization was established in June under the title of the Society for Socialist Inquiry and Propaganda, Mr. E. Bevin being Chairman. Its organisers hope to work on I.L.P. lines and so secure that body's members in a more subservient auxiliary.

#### MINERS.

Unemployment appears stabilised in the mining industry at about one-third of workpeople available. Though under the 1928 Act, the Ministry of Labour possesses powers to issue regulations to restrict recruitment of labour for mining, these have never been used. An understanding has been in force that apart from certain eligibles, all mine labour must be obtained through Labour Exchanges. The result is newcomers are discouraged. Under the Coal Mines Act, 1930, trouble arose early in the year on the hours question and this was remedied by a new Act on July 8, 1931, for 7½-hour day in the mines. The 18th International Labour Conference at Geneva on June 28 decided in favour of maximum 45½-hour mining week. Miners' Federation of Great Britain held Annual Conference at Blackpool, July 20–24, Mr. E. Edwards succeeding Mr. T. Richards as President. Resolutions passed included—untionalisation of mines, disapproval of majority report on Unemployment Insurance, new Compensation Act for injuries, an international agreement on output and marketing of coal. Lord Mayor's Fund for relief of distressed mining areas received in donations 5888,pr4 278, 3d., to which Government added an equal amount.

#### RAILWAYS.

National Wages Board for Railways issued on March 5, 1931, its findings following the Inquiry held in Jan.—Feb. arising out of a proposal of the companies to reduce wages. A reduction of 1½ pet cent. on wages up to 200, weekly and a further 1½ on remuneration above, in overtime and Sunday duty pay formed basis of award; a spread over of day's work to 12 hours was included. National Union of Railwaymen, I.comotive Engineers and Kiremen, and Railway Clerks' Association held delegate meetings March 12—26 and accepted the awards. Slight trouble occurred with "go slow" methods of working at goods depots, but this form of protest against changes soon fizzled out. Annual Conference of N.U.R. was held at Ipswich, July 6-11, Mr. W. Dobbie, of York, as President, being re-elected for fifth year. Resolutions passed included—national organization of all transport under public ownership and control; amendment of 1927 Trades Disputes Act; approval of railway electrification; against lengthening of driving hours. Arising out of the August political crisis, Mr. J. H. Thomas resigned membership of N.U.R. and Political Scoretaryship. R.C.A. held Annual Conference at Portsmouth, May 12—12, with Mr. T. H. Gill, M.P., as President, he being re-elected. The delegates, in spite of the wishes of the leading officials, passed a resolution calling upon their M.P.'s to ginger up the then Labour Government to do more on socialist lines. Nationalization of railways was demanded, Mr. A. G. Walkden, M.P., General Secretary, suggesting the purchase price at \$6-700,000.000. The Prime Minister received a deputation from three unions on May 29, and promised to consider their appeal for nationalization. Mr. C. T. Cramp, N.U.R., gave evidence July 2 before Royal Commission on Unemployment Insurance with a view for the continuation of the "exception" in regard to permanently employed railwaymen. Mr. J. Bromley, M.P., of L.E.F.,

supported present conditions of unions being responsible for own unemployment insurance.

#### SHIPBUILDING.

This is the most depressed trade of all, over half of the \$64,750 insured workers being registered as unemployed. The Great Yarmouth Annual Conference of the Federation of Engineering and Shipbuilding Trades (Mr. W. Sherwood, President) met on May 12 under depressing conditions. Resolutions were passed against further wage reductions, dispossession of Jobs without compensation under rationalisation schemes, recent railway wages settlement; public control of transport services was proposed, and demand made upon Government to offer financial facilities to shipbuilding companies. Negotiations between employers and workpeople dragged on, meetings being held in April, May, June, July and August. Complete breakdown occurred on Aug. 20, employers deciding that wage reductions were essential. The first came into force on Oct. 5, and other would be affective on Jan. 1, 1932. The men were advised by leaders to continue at lower terms but under protest; a strike was out of the question in view of trade conditions.

National Shipbuilder's Security continued its buying up and closing of redundant yards purchases having been made recently at Dalmuir, Old Kilpatrick, Ardrossan, Lowestoft, Stockton, Middlesbrough, Whitby, Sunderland, South Shield, Hebburn and Howdon By reducing the productive possibility of yards to the probable requirements for new ships, it is hoped to concentrate ou profitable work at the remaining yards.

Shipping. Chamber of Shipping in its report of Yeb. 12, 1232, pointed out average freights for 1250 were 23 per cent. lower than 1252. In the world laid-up shipping amounted to 7-8,000,000 tons. The Annual Conference of the National Union of Seemen (Mr W. R. Spence, General Secretary) was held in London, July 21. Wages had been maintained but subject to certain reductions in manuing. The Union was hostile to the Minority Movement. The unemployment percentage for seaman has been as high as 35. Germany reported in August that 17 5 per cent. of merchantile fleet had been idle.

#### STRIKES.

Textile trades, owing to the January and February dispute over the increase of number of looms per worker, are responsible for the large loss of working days in 1931 compared with tother industries. Coal comes second with trouble over wages and numerous small disputes over employment conditions. London electricians stopped work in March and April to extent of 3,000 to protest against withdrawal of special addition to London rates consequent upon a strike of 50 Dagenham employees for "London rates" at a border-line firm. Londoners retained their concession and the borderers brought to within 3d. per hour of London rates. Curtain and furniture workers were concerned in strikes over wage reductions. Generally, a spirit of give-and-take has applied and industrial conditions have remained quiet. It is realised that trade conditions necessitate reduction of costs of production, though obviously reduced wages by workpeople can never be welcomed.

#### TEXTILES.

Cotton has been faced with one unsettled problem—the reorganisation of the industry. Over 42 per cent of the workpeople have been registered as unemployed at the Labour Exchanges. The question of eight instead of four looms per weaver was discussed for at least two years and brought to an issue on Jan. 29, 293, by a lock-out. This was called off on Feb. 23 without any result having been effected. Negotiations have continued on the more looms proposal, but the operatives will not readily accept the change, apart from a few individuals who have been working eight koms. Wool textile workers and dyers have had from a quarter to a third of their people unemployed; negotiations over an approximate zo per cent. reduction in wages extended for months. The tailoring industry has witnessed, after many ballots and long discussions, the amalgamation of three trade unions—Amal. Society, Garment Workers and Lailes Tailors—into an organization with 70,000 members.

# TRADE UNION CONGRESS.

The 63rd Trade Union Congress was held at Bristol, Sept. 7-12, 1931, Mr. A. Hayday, M.P. (General Workers), as President. Membership of the Trade Unions affiliated was 3,779,400 (1930 actual total), being a decrease of 25,000 on 1930 Congress. Opening day was mainly occupied by presidential address and a survey by Secretary, Mr. Citrine, of the negotiations that led up to the fall of the Labour Ministry. The numerous resolutions adopted included—maximum 40-hour week, two weeks annual holiday with full pay for all workers, unremitting hostility to reduced benefits and increased contributions under unemployment insurance, enquiry into cinema employment conditions, new workmen's compensation insurance, reaffirmation of principles in Mond-Turner Report (2,818,000-160,000), planned and regulated economy in national life (2,865,000-749,000), nationalisation of mines and transport, public control of iron and steel trades (1,794,000-1,434,000), acceptance of a long report of 7½ pages from the General Council dealing with the internal situation in August. A resolution to compel by legislation employers to give written references to leaving employees was rejected. Fraternal messages were received from Canadian, Indian, French and U.S.A. trade unionists and the International Federation. The G.C.'s recom-

mandations in the Report were—cessation of deflation policy, reconstruction of basic indus-tries, revision of debts and reparations, inter-maticual co-operation for raising of level of wholesale prices, devaluation (raising Bank of England price for gold and thus lowering value of sterling in terms of other currencies), a full investigation into fiscal policy; the G.C. made no pronouncement on the question of a revenue tariff. The G.C. of the T.U.C. has been associated with the Labour Party Executive in practically joint working. A report on the working of the *Kond-Tuner Conference* on Industrial Re-organisation and Relations was issued Dec. 37, After recapitulating the history from 1927, the opinion was expressed that "the fullest consultations between the representatives of organised employers and organised labour is essential to the welfare of British industry." Mr. J. Bromley (Railwaymen) was elected new T.U.C. Chairman.

#### TRADE UNION MEMBERSHIP.

Bubles were published in the Ministry of Labour Gazette of Oct., 1931, for Trade Union Membership for the years up to 1930. The gradual decime in number of trade unions (due mainly to merging) and membership has continued fellowing a big drop in spars from the inflated figures reached in space from war-time effects, shough in spars a partial recovery took place. Statistics collected by the Registrars include:--Wantamble to to land

		Members	TITLD III GOOD II	
Year.	T U.s	Males	females.	Total.
·\$000	323	1,868	154	2,022

	z,098	4,034	70 I	4,855
	- Ammung mi	a miliont	to paviolo	n 1' -

The membership of the Trade Union Congress, i.e. members of the 169 organisations that sent delegates, was :-

1923 .....3,744,330. 1931.....3,719,401. These figures are based on the membership of the previous year and not at the actual meeting date (September) of the Congress.

The Transport Services have the greatest number of trade unionists—Railways, \$19,197; Water, 12,444; Road, dook and general, 759,143. Mining and Quarrying are second with 6s,531. Metals and Textiles follow with 612,735 and 501.281.

#### THE LAND VALUE TAX.

An important and much criticised revival of a tax on the ownership of land was introduced in tax on the ownership of many was a state was a state of the ownership of the Labour Government. The scheme differs somewhat from its predecessor of syn on being a flat rate tax, subject to certain deductions and exemptions, on the freehold value of land, whilst the earlier scheme was a tax on the increase in value of land osused by communal growth. Broadly, iand esused by communal growth. Broadly, the new tax involves the valuation of every piece of land in separate occupation (called a "unit") at its market value at the valuation date antiwith vacant possession, on the supposition that the land is devoid of everything but grass or heather (or trees and hedges in the case of agricultural land), although roads and works for its resembling or protection from flooding. for its reclamation or protection from flooding tions were: (i) that all documents should be

must be taken into constiteration; the value of any minerals, wayleaves, sporting rights, tillage and manures are to be disregarded. Agricultural land is to be dealt with somewhat differently; from the market value of the site is to be deducted the "oultivation value" land, i.e., the value of the land with its buildings, &c., as a farm or farmland. The resultant difference is the amount upon which the tax is to be based. A taxpayer may object to the unit or cultivation value by giving notice to the Inland Revenue Commissioners, from whose decision appeal may be made to one of a panel of referees. His decision, except on a point of law, is final. Except in the case of agricultural land, the value of any site thus ascertained is to be raduced by either (a) an amount equal to four times the annual value of the unit for income tax purposes, or (b) an amount equal to seven-eighths of the land value of the unit, whichever is the less. This reduc-tion will also apply in the case of agricultural This reducland where it exceeds the cultivation value of the unit. Numerons exemptions from the tax are provided for; these are land belonging to the Government, local authorities and drainage boards, the National Trust, railways and other boards, the Associatives, rainways and constanting public concerns, registered friendly societies and certain charitable bodies, and land used as playing fleids (as defined), public parks burial grounds, and sites for places of public worship. The most important exemption, howworship. The most important exemption, ever, is that on units where the aggregate tax would not exceed xos. per annum. The Act provides for a tax of one penny in the pound on the unit value thus determined, the first valuation to be as at Jan. 1, 1932. The task of valuing is entrusted to the Department of Inland Bevenue, the Valuation Office being augmented by temporary staff for the purpose. The cost of the first valuation was estimated to be between £x,eco,eco and £x;geo,eco, and involves the appointment of some see valuers, 600 valuation assistants, 200 draughtsmen, and 600 to 800 clerks, at salaries ranging up to £550 per annum At the time of writing, however, recruitment of the additional staff is being heavily curtailed for a period of at least six months as an economy measure.

#### LITIGATION COSTS.

In April, 1030, the London Chamber of Com-merce circulated a memorandum on the high cost of modern litigation, and asked the Lord Chancellor to consider the remedies suggested; the Lord Chancellor received a deputation on the subject in November, and subsequently obtained the views of the General Council of the Bar and the Council of the Law Society on the Bar and the Council of the Maw Society on the general question. The Chamber of Com-merce, while acknowledging that English pro-cedure was the most perfect of its kind in the world, stated that it was an expensive fuxnry beyond the means of the majority of people, except the very poor or the very rich, and that the main cause of expense was the law of evidence, in that, apart from mutual arrangement, every document and every fact had to be formally proved by personal attendance in court of the parties and witnesses. The comments and suggestions of the Chamber of Commerce relate to litigation arising out of ordinary business relations, and exclude therefore cases of divorce, libel or slander. The principal sugges

accepted unless formally challenged and oral proof: demanded, that evidence of wituesses aboud be in the form of signed statementa attested by a credible witness and that evidence from abroad should be given by affiderit or declaration, a practice with precedents in commercial cases; (ii) that, in all cases involving technical matters, an assessor to assess damages should sit with the judge as advisor, as in Admiratty cases, and that no expert evidence about the cases, and that no expert evidence than the cases. should be given; (iii) that the "two-thirds rule" should be abolished, a practice under which junior counsel is entitled to a fee from three-fifths to two-thirds of his leader's fee; (iv) that proceedings before trial should be simplified; and (v) that dates should be fixed for trials. The reports of the Bar Council and the Law Society do not proceed on the same lines as each other, and do not cover the same ground as the memorandum of the Chamber of Commerce, but they are in agreement with a modifi-cation of the "two-thirds" rule, though they do not consider that in most cases it works unfairly, with the fixing of dates for trials so far as possible and with the desirability of a revision of procedure, various technical changes being recommended by which improvement in the proceedings before trial could be effected. The Bar Council disapproves of evidence being in the form of statements not on oath, and of the proposal for an assessor to sit with the judge in certain cases; to reduce the present expense of expert witnesses, they consider a limitation of their number by the Master or Judge preferable. It is manifest from the memorandum and reports that a reduction in the cost of litigation can best be secured by a revision of the rules of procedure and the law of evidence, but in addi-tion a proposal, not dealt with in the reports, that only one appeal to a higher court should be allowed, has strong support, and would in many cases render less formidable the probable costs of contemplated litigation.

#### LONDON TRANSPORT.

In 2923 Bills were promoted by the London County Council and the London Electric Railway Companies to co-ordinate passenger traffic in the London area by means of agreements between the various transport undertakings embodying the principles of common management and a common fund. The passage of these Bills was interrupted by the dissolution of Parliament in May, 1929, but they were again considered by the new House of Commo as in July and, not receiving the support of the new Labour Government, were rejected; the Minister of Transport, however, promised an immediate examination of the problem. Subsequently, in March, 1931, he in-troduced a London Passenger Transport Bill which provided for a new Board to be set up, on the analogy of the Central Electricity Board, to be known as the London Passenger Transport Board, and composed of five members appointed by the Minister of Transport after consultation with the Treasury, and peid salaries, fees and allowences for expenses as determined by the Minister; its duties would be to secure the provision of an adequate and properly co-ordinated system of passenger transport for the London traffic area, and for this purpose it would take over the existing tube railways, the Metropolitan District Eailway and the Metropolitan Railway. but not the suburban lines of the four main line groups, special arrangements being proposed in

order to co-ordinate these suburban services with the Board's; in addition, the tramway under-takings in the London area, the London General-Omnibus Company and other omnibus under-takings in the Metropolitan Police district would be taken ove . The basis of the transfer would be, in the case of the Underground Group of undertakings and the Metropolitan Rallway, an exchange of the existing stock for the Board's transport stock, and for other private under-takings payment partly in cash and partly by stock, the amounts to be agreed or, in default of agreement, determined by a specially created arbitration tribunal; in the case of the tramway undertakings the Board would assume responsibility for the service of the outstanding debt on the transferred undertaking. The area affected lies roughly within as miles of Charing Gross, covering approximately 1.846 square miles, and comprises, in addition to the County of London, large portions of Essex, Hertfordshire, Kent, Middlesex, Surrey and Bucklughamshire; the capital involved was estimated to exceed £130,000,000. Severe criticism was passed upon the wide powers conferred by the Bill on the Minister of Transport and upon the compulsory. expropriation of municipal and private undertakings. During the Committee stage agreements as to the terms of transfer were announced as having been settled with the Underground Group, the London County Council and many of the other interests concerned, after full consideration the Joint Committee passed the Bill at the end of July with certain modifications and alterations, but no further progress was made owing to the fall of the Government in August and the inevitable absorption of its successor in urgent financial measures up to the dissolution of Parliament in October. The Bill was, however, kept alive by the procedure (said to be without piecedent in the case of a public Bill) of a resolution passed by both Houses to carry it over to the next Pallament; it was stated that about £40,000 had been expended in counsel's fees and other charges, which would fall to be paid by the Treasury if the Bill were dropped, but by the new Transport Board if passed. Among the minor provisions it is interesting to note the inclusion of powers to run a service of passenger vessels on the Thames.

#### MUNICIPAL AERODROMES.

MANY municipal authorities have enquired, during 1930, into the possibilities and cost of erecting aerodromes to serve their town, but the difficulty of obtaining a suitable large site within easy distance of the town, the heavy expense of construction and maintenance, and the likelihood of being faced with an annual defect for some time, have deterred many from proceeding after receiving a preliminary report and survey by aerodrome construction specialists. Interesting figures of the cost of establishing a civic air-pirtfor the joint use of Brighton, Hove and Worthing, show the estimated capital expenditure required to be 33,666 for the land, a lock-up langars, r main hangar, club and tearons, garage and parking ground, workshops, etc., while the sanual cost of upkeep (including wages of ground staff) is estimated at 5,384—but no profit is anticipated for the first two or three years. With the single exception of Blackpool, civic aerodrames are at distances ranging from 3,miles in the case of Leeds from the principal town, but

it is hoped that future schemes will incorporate the Continental practice of establishing the aerodrome as near as possible to the centre of the town; this will, however, be a matter of great difficulty in cases where large central sites are scarce as in many northern industrial towns. The improvement of aircraft in the direction of shorter take-off runs and the development of vertical flight would solve this problem in many cases, and would certainly encourage municipal authorities who are alive to the ultimate necessity for the establishing of an aerodrome, but who are chary of incurring too great an expense to proceed with a scheme. To assist air-minded local authorities, the Public Works Facilities Act, 1930, empowered them to acquire land compulsorily for the provision of aerodromes.

#### THE NATIONAL ANTHEM.

An anonymous protest against the wording and sentiment of the second verse of the National Anthem, which appeared in the Times in Kebruary, 1931, condemned the lines, "Confound their politics, Frustrate their knavish tricks," as "unchristian, indecent, disgraceful anywhere, in a church blasphemous, and in a cathedral a brawling obscenity." This vigorous onslaught produced many apologists for the actual words as well as suggested variants from those who felt that the spirit of the verse was in greater accord with the Old Testament than with the New. Dissatisfaction with the words of this verse is no new thing, and the suggestion of alternative verses not without precedent; of the latter, if any change were made, it was suggested by the Dean of Worcester that the most satisfactory would be the one already in use by at least one Philharmonic Society, which substitutes "Thy" and "Thee" for "his" and "him" in the second and sixth lines respectively, and becomes—

O Lord our God, arise, Scatter Thy enemies, And make them fall; Confound their polities, Frustrate their knavish tricks; On Thee our hopes we fix; God save us all.

In reply to a Parliamentary question as to whether the Government would consider the substitution of a new and more appropriate verse when the National Anthem was sung on special occasions for which the Government were responsible, the Chaucellor of the Exchequer replied that tradition was everything in the matter, and that the Government did not propose to try to improve on it.

#### NATIONAL MARK.

STRADY progress has developed the National Mark on home productious. National Mark beef has been placed on sale at Leeds, Bradford and Halifax, as well as in Birmingham and London. There have been attempts by butchers to evade the scheme by displaying private marks on beef or refusing to sell the certified quality of the National Mark but the public has realised what the National Mark implies, and is extending its insistence on the official marking. The standard fruit and vegetables, fresh apples, cherries and Councumbers, strawberries and tomatoes, table poultry, cider and malt products. Shops to

display National Mark goods have been opened by the Empire Marketing Board and Ministry of Agriculture. A special poster publicity campaign for National Mark goods was held Sept. 30-Oct. az. The British Steelwork Association adopted on March 3, 1932, a mark for all British steel so that it could be distinguished from the imported variety, some of which often bore the misleading letters of B.S.

#### NATIONAL PARKS.

IN September, 1939, the Prime Minister announced the appointment of a Government Committee with the following terms of reference :-- "To consider and report if it is desirable and feasible to establish one or more National Parks in Great Britain with a view to the preservation of the natural characteristics, including flora and fauna, and the improvement of recreational facilities for the people, and to advise generally, and in particular, as to the areas, if any, that are most suitable for the purpose." The Report of this Committee has now been published as a Blue Book. The Committee points out that the American model of National Park or National Reserve cannot be followed in this country owing to the density of the population and the developed nature of the greater part of the land, while, at the same time, these factors render more urgent adequate measures for the preservation of the country-side. The objects which the Committee desire to achieve by systematic schemes of National Reserves and Nature Sanctuaries are: (2) to ensure the preservation of large areas of exceptional natural interest against spoliation and disorderly development: (a) to improve recrea-tional facilities and to afford to the community means of access to the countryside and areas of means of access to the countryside and areas of exceptional natural beauty; (3) to promote protection and preservation of flora and fauna. The Committee consider that these objects could be secured by a planning scheme for the regulation of the public development of areas to be selected and that the present powers of the Pacitage Committees under the Torn the Regional Committees under the Town Planning Acts should be extended. It is considered premature to select suitable areas, but a National Authority should be set up fer this purpose and to give technical advice and assistance to the Regional Committees The Committee distinguish between National Reserves such as, possibly, the Lake District, Snowdonia, a coastal area in Cornwall or Pembroke, a section of the Broads or South Downs, Dovedale, a section of the Wye Valley and of the Scottish Border and Regional Reserves such as the High Peak of Derbyshire and Forest of Bowland, Cannock Chase and areas in Outer London. In the case of the former, preservation is a primary consideration, but in the latter, while this is important, access is a fundamental considera-tion. If it is desired to make a National Park on American lines the Committee suggest that the Caigngorm area would be most suitable, while the Clennore area, already possessed by the Forestry Commission, might be utilised for recreation and as a base for pedestrians without the need for a more extensive scheme. extended powers of the Regional Committees suggested are largely incorporated in the Town and Country Planning Bill which has unfortunately now been shelved owing to the financial

# NATIONAL TRUST.

Acquisitions by the National Trust during the year ended June 30, 1831, were—Alport Height, Derbyshire; land near Avonmonth, Bristol; near Birmingham; Haresfield Beacon and Stan-dish Park Woods, Glos; Lady's Well, Hempstead, Glos; Longslaw Moor, near Sheffield; Nare Head, Cornwall; Pendarves Point, Cornwall; Plaitford Common, New Forest; Town. Walls Tower, Shrewsbury; additions to previous hold-ings at Bolt Tail, Devon; more land at Burton Wood and Hawksmoor. In August, 1931, it was announced that 13 acres near Yentuor, I.O.W. were being presented to the nation in memory of Nansen. Gifts made now to the National Trust are not subject to Death Dutles. An offer of the are not subject to Death Duties. An offer of the remains of Odiham Castle, Hants, was declined by the National Trust in view of the repair and maintenance costs involved. In October the National Trust made an appeal for funds to preserve Whitehall, a 16th century house in Shrewsbury, built by Prynce in 125r. Assembly Rooms, Bath, were acquired by S.P.A.B. for N.T. in the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of

Rooms, Bath, were acquired by S.P.A.B. for N.T. in Oct., 1931.

In September, 1939, a Committee was appointed by Government to enquire into the question of establishing National Parks. The Report issued on Aug. 1, 1931, stated that it would be impossible to copy methods adopted in other countries owing to the English density of population and lack of available area. A system of National Because and Nature Sancturies was National Reserves and Nature Sanctuaries was suggested Cairngorm area was put forward as a site of a National Park on U.S A. lines in Scotland. As schemes set forth, including compulsory acquirement of common land under conditions, would entail much expenditure, it can be taken for granted that for the present

Other work in preserving anoient sites, obtaining open spaces for the public, is being done by the Society for the Protection of Aucient Buildings, Notety for the Protection of Ancient Buildings, working through its own £5,000 limited liability company, of which Lord Esher is chairman, Oxford and Cambridge Preservation Trust; Royal Society of Arts, owners of West Wycombe; Commons, Open Spaces and Footpaths Preservation Society; local authorities in the parks under their control.

the ('onmittee enquired in vain.

# OVER-PRODUCTION.

ALUMINIUM.

ALUMINIUM has been maintained in Britain for a long time at a standard price of £85 per ton owing to the International Cartel formed by Austria, Britain, France, Germany, Norway and Switzerland. The Cartel was due to expire at the end of 1931. Germany was responsible for 30,900, France 39,000, Switzerland 23,400, Norway 20,500, Great Bittain 29,400 tons yearly output. North America has been extending output until it has reached that of the rest of the world. only two producers control America, the Amminium Company in the U.S.A., and Aliminium. Limited, elsewhere. Unless the Cartel is ienewed and extended, there is a prospect of a general increase in output that will result in over-production and price-cutting.

#### COTTON.

Farm Board had in hand through its Cotton Stabilising Corporation 1,200,000 bales purchased in previous year with object of maintaining price levels. The surplus so worried the authorities that suggestions were welcomed, and it is said 300 different schemes were submitted. On Aug. 28, the House of Representatives in Louisiana passed a Bill to forbid planting in that State during 1932, contingent upon action by other States. The Federal Farm Board has decided not to add to lite stocks. The U.S.A. have been in touch with Egypt, expressing willingness to discuss the disposal of surplus supplies of both countries, but not the limitation of cultivation. Egypt's contribution was a decision on Sept. so to reduce 1932 acreage by as and 30 per cent. according to variety on the assumption that American acreage would be reduced. On Sept. 8 the Egyptian Government reduced the cotton tax on producers so per cent. to 28, per kantar.

Lack of demand for industry has led to the curtailment of production in the metal trades. Belgium, France, Germany and Luxemburg were all showing considerably less business than permitted them in the first half-year of 1931 under the quotas of the International Raw Steel Cartel. dermany had produced 1,166,814 tons less than permitted of her quota of 6,581,933 tons. U.S.A. iron and steel trades in September, 1931, were showing a reduced output of 50 per cent. on a year previous.

year previous.

In April, 1931, the lead producers of the world agreed to make a reduction of 15 per cent. on their outputs of 1930 in order to avoid a store of uns.ld metal at end of year. The piece of lead had fallen per ton from £36 55. In 1935 to £32 at the time of agreement for further reduced output. Spelter had fallen 66 per cent, in price the same period. Caudian figures for lead proin same period. Canadian figures for lead production of first six months of 1930 and 1931 were 172,204,000 and 146,419,000 lb4. respectively.

#### NITRATES.

On March 20, 1931, the Compania de Salitre de Chile was constituted under local laws. This tysix nitrate-producing companies in Chile became part of the combine known as Cosach, the Chilean Government being owners of half of the authorised capital stock, 3,000,000,000 gold pesos. An international loan issue of \$50,456,500 was begun in Match through bankers in U.S.A.; an issue of £2,000,000 was made in London. An international meeting held in July at Lucerne broke down without an agreement, the Chileans withdrawing because of the introduction by Germany of a tariff wall against Chilean nitrates. Secret meetings were reported to have been held by European producers, but a world agreement was not in view in the following months. By this time Belgium, France, Germany, Poland and Czechoslovakia had instituted official import restrictions, practically banning the imports of nitrates. The world seems to have a surplus of nitrogenous fertilisers, but the state of much farm land suggests a want of manures.

#### RUBBER.

Over-planting in 1925-6 has had its result in making rubber a surplus commodity, that it is Official estimate from Washington Board of Agriculture issued Sept. 8, 1931, was for a duction. In 1930 the shipments from rubber-crop of 15,685,000 bales, compared with 13,932,000 producing companies amounted to 83,000 lons, bales of 1930. At that moment the Federal of which 96 per cent. came from British and Dutch territories. The companies desire some plan of restriction, a popular one being a fax on exports to be used in destroying the surplus. The Dutch Government's position is that it would be contrary to their policy to place any compulsion on the native population. The British Government could hardly adopt restrictive powers alone—Lord Passfield stated, when Colouial Secretary, that the Government could not initiate but it would consider any agreed scheme by producers in all countries concerned. A Government Commission began an enquiry on Sept. 8, 293x, into the taxation of rubber companies in the Malay States. Whilst rubber remains at about 3d. a pound (Oct., 293r), dividends by rubber companies are almost out of the question, and about £225,000,000 British capital is locked up urrenumeratively abroad.

#### TIN.

In March, 1931, the Governments of Bolivia, Dutch East Indies, Malaya and Nigeria agreed to an international restriction scheme of production, the quota for each country being based on the 1922 output figures. Dutch East Indies had a cut of 264 per cent., Federated Malay States as 14, and Nigeria 255 (10,412 tons of 1922 giving a quota of 7,750. Complaints were made subsequently that Nigeria appeared to be unduly penalized. On Aug. 24, 1931, an International Tin Fool was formed with concurrence of the four mentioned Governments. The Fool is to acquire tin for release at prices on a sliding scale sanctioned by those Governments. The first release will take place of 5 per cent of the holding when spot price of tin on the London market exceeds £150 a ton. At that time, tin was quoted in London at £150 per ton.

#### WHEAT.

Statisticians agree that the world output of wheat for 1931-a will show a drop of 25-30,000,000 quarters compared with provious season. Climatic conditions rather than local contraction of cultivation are responsible. In U.S.A. the production is expected to reach \$69,000,000 busiles at a time when a surplus, accumulated over five years, has reached 500,000,000 busiles. A world estimate of the surplus left over from 2930-21 was issued officially from Washington as 679,000,000 bushels. The problem of the disposal of the surplus has been worrying exporting countries. A World Wheat Conference in Rome, April, 1931, favoured extension of wheat in those countries where it was not largely consumed, disposing, if necessary, of surplus stocks at low prices. Wheat-exporting countries held a conference in Loudon in May, but no remedial measure found acceptance. It was agreed that acreage could be reduced, other channels of use for wheat discovered, and an international system of orderly mark ting established. An International Wheat Information Service was recommended for support officially by Governments concerned. The International Institute of Agriculture that met in Rome in August favoured an international short-oredit bank for farmers with the national banks as shareholders. The European Union Commission at Geneva in September had in mind a preferential treatment of E. and S.E. Europe in the disposal of harvest surpluses. The Federal Farm Board of U.S.A., officially authorised to buy local produce for gurpose of stabilising prices, made three big deals in surplus wheat. In Aug., \$500,000

bushels of wheat were exchanged for x,050,000 bags of Brazilian coffee; Sept., 49,000 tons of wheat and flour sold to Chins for exclusive use in flooded areas; Sept., 7,500,000 bushels of 2500 crop sold to Germany (Getreide Handelsgesell-sollaft). British farmers have suffered owing to foreign wheats being imported at low prices, but the consuming public has not gained to any extent in reduced prices of bread.

#### PILGRIM TRUST.

WORK began on Oct. 1, 1930, of the Pilgrim Trust, the body presided over by Mr. S. Baldwin, in the distribution of the sum of \$\( \)_{\text{scoop}}\$ presented by Mr. Rdward Stephen Harkness, the rich U.S. A. philanthropist. The donor was entertained by the Pilgrims to lunch in London on Juneas, 1931, and publicly thanked. Amongst the subscriptions made by the Trust during 1931 were—\$\( \)_{\text{scoo}}\$ cot of preserve amenities of Oxford and Cambridge, saving of Durham Castle (these were especially mentioned by the Archbishop of Canterbury at the lunch), \$\( \)_{\text{scoo}}\$ co Cardiff Cathedral, \$\( \)_{\text{scoop}}\$ cooperations birthday Fund (amesthetics in maternity cases), \$\( \)_{\text{scoop}}\$ called a firthday Fund (amesthetics in maternity cases), \$\( \)_{\text{scoop}}\$ called a firthday Fund (amesthetics in maternity cases), \$\( \)_{\text{scoop}}\$ counding site appeal, \$\( \)_{\text{scoop}}\$ called and \$\( \)_{\text{scoop}}\$ firthday Fund (amesthetics in maternity cases), \$\( \)_{\text{scoop}}\$ counding site appeal, \$\( \)_{\text{scoop}}\$ called and \$\( \)_{\text{scoop}}\$ firthday Fund (amesthetics in maternity cases), \$\( \)_{\text{scoop}}\$ called and \$\( \)_{\text{scoop}}\$ firthe of the Trust 18 10 York Buildings, London, W.C.

#### THE POPE'S VIEWS ON MARRIAGE.

COMPANIONATE marriages and divorce, birth control and sterilastion, were roundly con-demned by the Pope in an Encyclical upon Christian Marriage issued from the Vatican during the year. Showing a surplisingly wide knowledge of the social questions of the day, the Eucyclical claimed that Christian marriage was a Divine ordinance and consequently indissoluble. The "involable stability" of marriage, the Pope said, was menaced "not secretly nor under cover, but openly with all sense of shame put aside, now by word and again by writings, by theatrical productions of every kind, by romantic fiction, by amorous and frivolous novels, by cmematographs portraying vivid scenes, by addresses broadcast by radio-telephone, in short, by all the inventions of modern times the sanctity of marriage was trampled upon and derided; divorce, adultery, and the basest vices are ex-tolled or depicted in such colours as to be free from all reproach and mfany. The doctrines defended are offered for sale as the productions of a genius which is thought to have emancipated itse'f from all the old-fashioned and immature opinions of the ancients, and to the number of those antiquated opinions is relegated the tradi-tional doctrine of Ch istan marriage." Another passage read: "Any use whatsoever of matrimony exercised in such way that the act is deliberately frustrated in its natural power to generate life is an offence against the law of God and nature, and these who indulge in such are branded with the guilt of a grave sin." "Con-jugal honour," the Encyclical declared, consisted in "a deep attachment of the heart" and a perfect partnership in domestic life. "Conjugal tidelity requires the sacred loyalty of one party to the other, bound by true love. The wife should be subject to the husband, but this subjection does not deny the liberty which belongs fully to the woman in view of her dignity as a human being and her noble office as wife, nother, and companion. Nor does it bid her to obey her husband's every request when such a request is not in keeping with reason. Marriage requires, on the part of the wife, her noble obedience." The Pope described "experimental," "temporary," and "companionate" forms of matrimony as "hateful aboninations which beyond all question reduce our truly cultured nations to the baristrous standards of savage people." The burden of children, His Holiness people." The burden of children, His Holiness went on, "leads some people to frustrate the marriage act. Such action is shameful and intrinsically vicious. While the Church sympathizes with those people, who, in extreme want, experience the greatest difficulty in rearing their children, case must be taken lest a more calamitious error should befall them." Simiharly the Pope condemned the proposed sterllization of the unfit. "Those who act in this way he declared, "are at fault in losing sight of the fact that the family is more sacred than the State and that men are begotten not for the earth and time, but for heaven and eternity."

#### R101 DISASTER.

THE Court of Inquiry into the loss of the Rior came to the conclusion that the disaster was caused by a sudden leakage of gas from one on more bags in the fore part of the airship associated with a heavy down-current of air. In their report, Sir John Simon and his two assessors pointed out that the precise details of the nature of the accident could never be ascentained as there were no survivors among those who where in the control car at the time. They considered that the airship first dropped her nose and descended at a steep angle but was brought back to an approximately horizontal position. Then, in spite of all efforts, she failed to get her nose appreciably up but continued horizontal until she dived again and struck the ground almost at once at an angle of at least fifteen degrees. "Although the vessel had lost much height during the first phase, if she had been in a normal condition there seems no reason why she should not have pointed her nose up again and regained altitude. fact that she failed to do so, it may be argued most conclusively that she was by then crippled beyond recovery, and the inference is that though momentarily on an even keel she was descending rapidly to earth." Reconstructing the position, they thought it possible that if the vessel, having become somewhat heavy, had been raised by a buffet of wind, the elevator would be put down by the coxswain, who had just come on duty, to check and counteract the movement The conswain ought put his elevator rather more down than was necessary, or keep it down longer than was exactly right. The vessel's nose would drop If, when her nose was inclined downwards she received a strong buffet of wind above her nose it would push her nose further down. If she were already heavy from loss of gas-especially if a rent had occurred in a gasbag which involved progressively rapid inflation—the descent was emphasised. The coxswain would put his elevator up, but she did not come out of her dive as rapidly as she should because she was losing more gas all the time "How the vessel began to lose gas can never be definitely ascertained. The weather was exceptionally bad; the gasbags were hard up against padded

possibility of leakage through chaffing, or, if the vessel rolled through an unusually large angle, through intermittent opening of the gas valves. It seems very probable that the more serious and sudden loss of gas which followed was connected with a specific misfortime such as the ripping of the forepart of the envelope. The explanation that the disaster was caused by a substantial loss of gas in very bumpy weather holds the field." The Court rejected any idea that the vessel broke up in the air from internal weakness, and entirely rejected any suggestion of mefficiency on the part of officers and crew. No blame was put upon those responsible for the decision to make the flight at that time, but the Court could not avoid the conclusion that the Rior would not have started when she did if it had not been that reasons of public policy were considered as making it highly desirable for her to do so if she could.

#### RENT RESTRICTION.

In October, 1930, the Minister of Health and the Secretary of State for Scotland appointed an inter-Departmental Committee under the chairmanship of Lord Mailey "to enquire into and report upon the present workings of the Rent Restriction Acts (excluding the special provisions relating to agricultural cottages) and whether any modifications or annualments should be made to them." A separate Committee, under the Charmanship of Mr. Walter R. Smith, M.P., was appointed to consider and report upon the conditions of agricultural cottages. The Report of the Pilneipal Committee was published in July, 1931. It is esthuated that the total number of houses in England and Wales is now about mine millions, of which about one and a half millions have been elected since the war. Of the seven and a half million pre-war built houses about six and a quarter millions are still subject to control. Of the one and a half million new houses, about six hundred thousand have been built by local authorities and may be regarded as available for letting. These form practically the only supply of new houses to meet the demand of the poorer paid working classes, and there still exists a considerable shortage of houses for this class. As regards houses for the middle class or better paid attisan class, private enterprise has largely met this demand by the provision of houses principally for sale, and here the building societies bave rendered invaluable assistance. The Committee divide controlled houses into three classes In the case of Class A, ite, houses with a lateable value of £48 or over in the Metopohtan Police district. £38 or over elsewhere in England and Wates and £48 or over in Scotland, it is recommended that control shall be discontinued torthwith. More than one-third of the houses of this class have already been decontrolled under the 1923 Act, owing to the greater mobility of the population, and there have been provided over 350,000 houses of this class, so that in fact it is a minority only of this class which is subject at present to control. Class B is defined as houses with a rateable value of less than £45 but over £20 in a Metropolitan Police district, less than £35 but over £13 elsewhere in England and Wales, and less than £45 but over £26 gs. in Scotland. Here it is recommended that control projections, some of which may have begin to wear the fabric; the bumpiness of the wind and Scotland. Here it is recommended that control the pitching of the ship would intensity the strain; and earlier flights had indicated the belong to this class, as do a large proportion of houses built by local authorities. It is considered that the gradual decontrol by possession under the real Act is less objectional than any method of gradual decontrol. Class C includes all houses the rateable value of which does not exceed £20 in the Metropolitan Police district, £13 elsewhere in England and Wales, and £25 5s. in Scotland. It is recommended that here control shall be continued and also that Class C houses shall cease to be subject to the decontrolling provisions of the real Act. The

Brentford. It comprises the British Industrial "Safety First" Association, the London and other "Safety First" Councils. It is supported entirely by voluntary subscriptions and is assisted to a considerable extent by voluntary unpaid workers. The "Safety First" movement is concerned with industrial safety as well as with safety on the highway and in the home. On the industrial side the following table, prepared from the Compensation Returns of the Home Office, shows the seriousness of the present position:—

	Number	Number of Cases.		Compensa-	Fatal Acci-	Disable- Compensati	Compensation Paid in Shil-	
Year	Employed.	Fatal	Non-Fatal	Total.	tion Paid.	per 10,000 Employed	Employed	lings per Employee
1919 1920 1921 1922 1923 1924 1925 1926 1927 1928 1929	8,359,183 8,348,150 7,315,866 7,305,609 7,343,311 7,513,359 7,541,014 7,001,795 7,403,222 7,453,660 7,450,112	3,293 3,531 2,385 2,489 2,657 2,878 3,030 2,345 2,567 2,735 2,819	365, 176 381,986 883,361 390,423 477,378 487,442 473,055 368,563 455,862 461,485 478,602	368,469 385,517 885,746 392,912 480,035 490,320 476,081 370,908 458,419 464,220 481,471	4,616,723 5,978,009 5,509,395 6,495,728 7,134,096 6,667,038 6,642,930 6,006,921 6,315,803 6,557,873 6,559,918	3'9 4'3 3'4 3'6 3'9 4'0 3'3 3'4 3'8	437 458 387 542 532 640 627 526 615 620 642	11'0 14'3 15'0 18'0 19'5 17'8 17'1 17'1 17'1

effect of the 1923 Act is to immobilise working class tenants. The decontrolled rentals of such houses average \$5 to 90 per cent. above the pre-war level as compared with 50 per cent. in the case of controlled houses. Only about one-eighth of ('lass ('houses have become decontrolled, and the 1923 Act has not succeeded in encouraging private enterprise to erect houses of this type. It is not proposed that control shall be re-instated when Class C houses have already become decontrolled, owing to the many difficulties which such a course would involve. Further recommendations propose that all public houses should be decontrolled, and in the case of mortgages that control should continue so long as the mortgaged house is controlled, and that in the case of Class A houses control should continue for a period of six months after the decontrol of houses of this class. In regard to sub-letting, the tenant should be required to notify the landlord when he proposes to sub-let, and that in certain cases there should be a penalty for extortionate charges to sub tenants, which should also be grounds for an application by the landlord for possession. Unfortunately, it is unlikely that Parliament will be able to give statutory effect to the recommendations of the Committee during the present year, although these would appear to meet with general approval.

#### SAFETY FIRST.

THE increasing number of accidents, particularly street accidents, during the last few years has aroused considerable public concern. A number of voluntary organisations have been commenced at various times to endeavour to effect some improvement and, in 1944, the National "Safety First" Association was founded. This Association has as patron H.R.H. The Duke of York and is under the Presidency of Viscount

It will be observed that the years 1927, 1928 and 1929, show a progressive increase in the number of both fatal and non-fatal accidents, and a corresponding increase in the compensation paid per employee. The Safety First Association endeavours by propaganda. a Freedom From Accidents competition, a Safety Engineer Service and by other means to educate the workers and employers and to effect a reduction. Other valuable work in the same direction is carried on by the Industrial Welfare Society, the Institute of Industrial Psychology, &c. On the side of public safety, street accidents are, of course, responsible for the great majority of accidents. The following table shows the increase in the numbers of drivers and vehicles during the last to years —

			<del></del>	
Year.	No. of Motor Driving Licences	Increase over Previous Year,	No of Motor Vehicles (Excluding Trums)	Increase over Previous Year.
				_
1921	1,106,000		860,08a	_
1922	1,210,700	104,700	962,115	102,033
1923	1,416,400	205,700	1,127,590	x65,475
1924	2,644,400	328,000	1,312,357	184,767
1925	x,923,900	279,500	1,583,210	210,844
19 6	2,132,900	209,000	1,704,813	181,012
1927	2,349,000	216,10C	1,874,681	170,468
1938	2,527,000	178,000	2,012,904	138,223
1939	2,687,000	100,000	2,149,228	136,324
1930	2,810,000	123,000	2,237,474	88,246

Up to 1925 the yearly rate of increase was progressive, but since then the rate has gradually declined, and 1930 shows a considerable drop. The following table, prepared by the National Safety First Association from the Home Office

and Ministry of Transport figures, shows the | pleased to accept the special Thousand Millionth position for the last ze years:— | Certificate produced in honour of the event.

Year.	Number of Accidents in which Mechanically Propelled Vehicles (exclud- ing Trams) were involved.		No of Fatalities per 1,000	No of Accidents per 1,000	Vehicles per	No of Accidents per 1,000 Motor	
	Fatal	Non-Fatal	Total	Velucies	Vehicles.	Accident	Drivers Licensed.
1921	2,091	36,609	38,700	<b>2.43</b>	44.9	22	35
1922	2,222	43 058	44,280	3.31	46 o	22	37
1983	z,435	53,084	55,519	3.19	49.2	20	39
1924	3,019	64.318	67,337	a.3o	2z.3	19	41
1985	3,401	79,377	82,778	3.33	54'3	x8	43
1926	4,±55	86,890	91,045	2 44	53'4	18	43
1927	4,480	95,170	99,650	z.39	53 =	19	42
1928	5,223	106,753	111,976	a·59	55.2	18	44
1929	5,722	111,136	xx6,858	a.00	54 4	13	43
1930	6,222	114,937	181,150	2 78	54 I	18	43

While each year since roar has shown an increase in the number of accidents, the increase for 1930 over 1929 is less than in any of the previous years shown. Moreover, the relation-ship between the number of accidents and the number of vehicles and drivers licensed, has remained steady ever since the Association's campagn was started in 1925, whereas previously it had been getting worse each year. The fatality ratio, however, is still rising, and this is probably accounted for by the increase in the average speed and weight of vehicles. The total number of all street accidents in 1930 was 156,793. resulting in deaths to 7,305 persons, and injury to 177,895, a total of 185,200 killed or injured Compared with 1992 this represents an increase of nearly three and a half per cent. in the number of accidents, and four and a half per cent. In the number of killed or injured. These rates are practically the same as those a year ago, and considerably less than the corresponding rates in all other rates since the war. The National Safety First Association carry out an extensive propaganda to avoid road accidents. The Road Fellowship League set up by the Association, does a good deal of useful work to educate drivers of vehicles. An important branch of the work of the Association is the Safety First Institute for Children. The National Safety First work was first started in 1930 and has been very successful. A considerable drop in the number of accidents, both industrial and street accidents, took place during each Safety Week held, and there is no doubt also that the holding of Safety Weeks has a permaneut educational value.

#### SAVINGS CERTIFICATES.

THE popularity of the National Savings Certificate is well maintained. During the twelve months ended August 31st, 1931 (the most recent date for which information was available before this Almanack went to press), the average weekly sales of Certificates was over a million and a quarter. Certificates were originally put on sale in 1916 and by the date given above the total number of Certificates sold was 1,048,574,774, representing a cash investment of £84,469,569, while the amount remaining to the credit of investors (accound interest included) was approximately £499,000,000.

In January, 1931, the National Savings Move-ment celebrated the issue of 1,000,000,000 Certificates and His Majesty the King was graciously

An outstanding feature in the development of the Savings Movement during 1931 was the successful implementing of an agreement for co-operation between the Movement and the Trustee Savings Banks. Co-operation with the Post Office Savings Bank having been brought about earlier, the position now is that the three great State-controlled systems of popular invest-ment are working together for their common purpose. An important step with legard to Savings Certificates of the First Issue was taken during the year Powers were given by the Finance Act of 1931 to prolong the currency of any First Issue Certificates to a date not later than March 31st, 1940.
Three different Issues of National Savings

Certificates have been made :

First Issue Certificates (cost price 155 6d. and ten-year maturity value 26s.) issued from Feb.

1916, to March 31, 1922.
Second Issue Certificates (cost price 16s. and ten-year maturity value 26s.), on sale from April z, 1922, to Sept. 30, 1923.
Third Issue Certificates (cost price 168, and ten-

year maturity value 245 ) on sale from Oct. 1, 1023. Holders of First Issue Certificates, instead of encashing the Certificates at the end of ten years, can adopt any of the following courses:—
z. Retain Certificates until March 3z, 193s,

with interest after the tenth year at one ponny per mouth per Certificate.

2. Exchange them for Third Issue

3. Transfer into 4 % National Savings Bonds.
4. Transfer into 4½% Conversion Loan (1940-44).

Powers have been given by the Finance Act of 1931 to prolong the currency of any First Issue Certificates to a date not later than March 31 1940. Statistics.

Year 1915-6)	Substribed	Repaid (excluding Interest )	Remaining (excluding Interest.)

#### SHOPPING CURIOSPIES.

THE first "Automatic Restaurant" was opened in England by Presto, Ltd., in the Strand, London, on May 4, 282. Thirty machines were installed to cater for 2-300 customers. The show is open for full as, hours, customers being in a position to serve themselves when and how they please. Maximum price for a dish is 6d. The

Austrian Ambassador was an early patron.
National Flying Services, Ltd., opened in Northumberland Avenue, London, in May, 2931, an "Aviation Shop" in which everything associated with flying, from goggles to an aeroplane, could be purchased. Interior of shop was designed like an air liner cabin, with an aeroplane wing for counter. It acted also as a booking-office for air trips. The fundamental idea is to increase public interest in aviation.

British Waltham Watch Company introduced first Public Time Ball signal in London at their Holbern premises on May 5. This was worked by signal from Greenwich, whereby at z p.m. a gided ball would fall down a steel shaft, a z,ococandle-power lamp lighted and a gong sounded.
In June, controversy aruse over the time taken

in making a suit following upon a reminder that in 1898 an American record was set up of in 1895 an American record was set up of 6hrs, 4min, from sheep's back to completion. On June 23, 1931, Yorkshire firms started clipping of sheep at 8.50 a.m.; wool was carded, spun, warped, dyed, wove, shrunk, pressed, sent to tailors, cut, stitched, with the final button taking its place at 12.27 p.m. The suit was to the measure of Mr. J. H. Thomas, M.P. On the following day Huddersfield, working with Leeds following day Huddersfield, working with Leeds, set up a record of a finished suit from the time of beginning shearing of a hrs 9 min, 46 sec. A suit made under such conditions was said to cost £xoo.

#### SUBSIDY FOR OPERA.

A season of grand opera assisted by a State subsidy took place at the Royal Opera House during the autumn as a preliminary to performances in the country. The scheme, when announced by the Chancellor of the Exchequer some time before the financial crisis, aroused considerable interest and some criticism, and the latter was increased when it was later inthe latter was increased when it was inter in-timated that despite the necessity for severe retrunchment no alteration was to be made in the arrangement. To assist in the performan one arrangement. To assist in the performances of operas, both at Covent Garden and in provincial centres, the Treasury agreed to provide £5,000 at the beginning of 1933, and £17,500 a year for five years from April x, 1933, as additions to the income of the British Beadasting Comments. Broadcasting Corporation, who would hand the sums over to the Opera Syndicate in return for the right to broadcast performances. The Corporation thus became the agents for this expenditure, and a revised agreement with the Postmaster-General sauctioning this new activity was agreed to by Parliament. It was estimated that for the purposes ment. It was estimated that for the purposes of this presentation of grand opera a sum of £30,000 a year would be required for five years. In addition to the State grant of £77,500 a year, and it was hoped to obtain the remaining 5,see a year from private subscriptions. The first performances at the Royal Opera House were generally on the lines of those given in Saturday in March, or it that is Easter-time as former years, and they were then repeated at it is this year, a week later, which will nullify

popular prices, the company afterwards giving performances at popular prices in the provinces. The main purpose of the scheme was to en-courage and attraulate British opera production, and it was unfortunate that the first performances should coincide with a time of crisis and depression.

#### SUMMER TIME ABROAD,

THE principle of altering the clock in order to begin the day of business and general life earlier in the solar day was conceived by Mr. William Willett of Chislehurst, the head of a well-known willett of Chisenburs, the need of a well-known building business, about the year 1909, and was brought before Parliament in 1908 by Mr. Robert Pearce, Member of the House of Commons for Leek, Staffordshire, who introduced a Bill known as the Daylight Saving Bill which proposed that the clock should be put forward by twenty minutes in the mornings of four Sindays in Auril as that dusing the Streeper four Sundays in April, so that during the Summer months clocks would be eighty minutes in advance of Greenwich Mean Time. This Bill-passed second reading, but evidently there was much doubt whether it could be carried intoeffect. The Bill was amended in Committee by the proposition that the change should be made by putting the clock forward one hour on the third Sunday in April and one hour back on the third Sunday in September, and in this form it was re-introduced in Parliament in 1909. The matter, however, was shelved until 1916 when it was brought forward as a measure made advisable by circumstances of the war, and a Bill became law in that year which, with some modification, has remained in force in Great Britain since. It was brought into use for the first time on Sunday, May az. Its purpose has been carried out with little difficulty and with little open objection by the majority of the people, though there are some to whom the change of time reckoning twice a year is repugnant, and a plea for its abolition on behalf of the agricultural industry and because of the supposed injurious effects on children sometimes finds its way into the public press. The scheme was approved in the same year, 1916, by the governments of Austria, Denmark, France, Germany, The Netherlands, Italy, Norway, Sweden, and Portugal, and brought into use in all of these countries, but has since been largely abandoned. From the following brief notes, which are not to be taken as complete, the state of affairs in this respect in most parts of the world may be inferred.

In FRANCE the system was adopted for the first time on June 15, 1916, and in each year since a period between certain dates has been set apart for its operation The Law of May 24, 1923, prescribing the last Saturday in March at 23/1. and the first Saturday in October, with power to vary, as the limits of the period, is in force in France and Algeria, and it is believed that though there is some small objection in agri-cultural centres there is no active movement against it. The same applies to Belgium. In recent years the system has been in use in FRANCE and BREGIUM during the same period in each year as it has been in England, but a note in the Railway Gazetts states that the Governments of these countries have

the convenience to Continental travel and to other international relationships that the lately prevailing uniformity has brought about.

In the NETHERLANDS conditions somewhat similar to those in France prevail. Summer Time was adopted in this country on May 3, 1916, before it was in England, and remained in use until man, being continued after the war as a voluntary measure, but was then discontinued until 1925, when, because of the much-increased tourist traffic, Summer Time was imposed generative. ally by legal enactment, but because of its dis-advantages to the agricultural and industrial classes, the law was modified in 1928, and made compulsory only in regard to the traffic services, the period being from May to October.

In Germany and Auseria Summer Time was brought into use on the night of April 30-May 1, 1916, and was continued until the end of the war; but the law was not renewed in Germany in 19x9, nor has it been since, as there seems to In 1939, nor has it been since, as there seems to be no general feeling in favour of the system, though a society exists with the object of reviving Summer Time. It has also been given up in AUSTRIA. In DENMARK Summer Time was in use from May 15 to September 30, 1916, but was found to be so unpopular with the farming community that the question of reviving it has not been considered. CZECHOSLOVAKIA is said to have given Summer Time a good trial, but has discontinued it, fluding it not conomic Norwar, where the system was first used at the same date as in England, Muy ar, 1916, and ITALY, who followed a week later, May 27, 1936, have since discontinued it. Summer Time is also not used in SWEDEN. In SPAIN, though it had been tried and found disadvantageous to the workers, and irksome generally to the inhabitants of towns and cities, it was decided to re-introduce the and cities, it was decided to Pentroduce the system in 1931 for the same period as in Great Britain, but this decision was reversed by the new Republican Provisional Government, and Summer Time did not operate in Spain or Portugal last year. According to a newspaper. announcement, SOVIET RUSSIA decided to adopt Summer Time on July 18, 1930, but further details are not known.

Western Hemisphere. In Canada there is no general regulation as to Daylight Saving, as the scheme is always called there and in the United States. When a Bill to introduce it was brought before the Honse of Commons at Ottawa in 1918, there was considerable opposition by the Canadian people, who, however, supported the innovation in the following year, and the result appears to be a species of local option In ONTARIO, and probably in other provinces, each municipality determines what time it will use, and in general clocks are altered in the cities though not in the country places, which is naturally the source of much confusion. In the UNITED STATES a Daylight Saving Act has been repealed as a Federal law, and the actual practice seems to be as in Canada, the attention of clocks being made, if at all, for local considerations. It appears that Daylight Saving is practised in Chicago, and it is read under date April ag, 223, that the clocks of the Grain Exchange at Winnipeg were to be moved forward on hour to contemp with the clocks. change at Winnipeg were to be moved forward localistic decision occasioned much consone hour to conform with the change in Chicago, frow Fork and Liverpool. In the State of Alabama the Standard Time from Oct. z to strong claim was advanced on behalf of the actors Fab. ze (approx.) is 5% hours alow on Gleenwich, in equal treatment with chemas. After hearing which is nearly the local time of the eastern | the views of deputations from the various

part of the territory, and six hours slow during the remainder of the year, which reverses the usual practice, since in the summer months the clock is slower on the sun than in the winter. In Maxico the Summer Time system is now in operation. It appears that the plan of putting the clock forward throughout the year had: been given up after trial.

As to South America, the Standard Time throughout CHILE is four hours slow on Greenwich during the summer months from Sept. z to wich during the summer months from Sept. 2 to March 2s, but five hours slow in the other part of the year. According to a newspaper note, Summer Time was adopted in ARENTINA For the first time on Dec. 1, 1930, the clocks being advanced one hour, the system to remain to advanced one hour, the system to remain to lorce until March 3z, and it is learned from a later press note that this proved so successful that it is certain that the alteration of clocks will be repeated. The schoue was adopted in BRAML for the first time on Oct. 3, 1932, for a period ending March 3z, 1932, but since the effect or desirability of Summer Time is said to be a matter of latitude, details as to its operation, and reports of its success in different parts of these large areas, are wanted. In latitudes where the amount of twinght is almost negligible the new arrangement is considered as a boon to the new arrangement is considered as a boon toworkers, since it provides them with an extra hom of daylight for recreation.

It appears that the experiment of varying the clock was made in Australia in the year 2016, but was pronounced to be without advantage after short trial. There is a Summer Time Act, 1929, in force in Naw Zealand. Summer Time begins throughout the Dominion on the second Sunday in October and ends on the third Sunday in March. During this period the clock is advanced on New Zealand Standard Time by half an hour, so that during the operation of the Act the time is exactly is hours fast on

Greenwich.

#### SUNDAY CINEMAS.

For the last twenty years it has been the policy of the London County Council, while granting cinemas licences subject to a condition prohibiting opening on Sundays, Christmas Day and Good Friday, to receive applications for Sunday open-ing and then to intimate that they would take no proceedings in respect of such performances no proceedings in respect of such performances on certain conditions, the principal one being that the net profit should be paid to a charity selected by the licensee from a list approved by the Conneil, as a result of this policy it was stated that about £200,000 had been paid to charities, including loopitals, in the course of recent years In December, reco, in an action brought at the instance of the Entertainment Protection Association, Ltd., a decision was given by a Divisional Court of the King's Bench, and subsequently upheld by the Court of Appeal, that in view of the provisions of the Sunday Observance Act, 1780, the Council had no power to permit the Sunday opening of cinemas. Under the Act of 1780 a common informer was enabled to institute an action to recover penalties for infringement, and proceedings by informers were commenced forthwith The decision occasioned much controversy as to the expediency of the Sunday

interests concerned, the Home Secretary, in April, sgar, introduced the Sunday Performances (Regulation) Bill, empowering the council of any county or county borough to license and permit the taking of money on Sundays for musical and cinematograph entertainments, for exhibitions of animals or inanimate objects, and for debates; before exercising this power, how-ever, the Council must satisfy itself that there was a substantial demand in the locality for the grant of such licences, and, after hearing any representations on the matter, must pass are resolution that it was expedient that such should be granted; in the case of chuemas the licence was to be subject to the conditions that such amounts as the Council might determine to represent the profits must be paid to charities approved by the Council, and that none of the Sunday employees should be employed in cinemas for each of the six previous days. The Bill was left to a free vote of the House, and the chief grounds of the strong opposition which it encountered were that it legalised illegality, that it discriminates unfairly between one form of entertainment and another, that the onus of decision should be borne by Parliament and not thrown upon local authorities, that the principle of Sunday opening would later be inevitably extended to other interests, and that the observance of Sunday as a day of worship should be carefully safeguarded, whereas this was an attempt to commercialise it. The main argument in favour of the Bill was that it merely made legal a practice deemed to be within the law for nearly twenty years, and that it was un-desirable that the law should remain as at present, whereby every infringement of the Act of 1780 by the licensee of a cinema was open to an action by a common informer, with penalties following automatically on proof of the complaint. During the Committee stage a strenuous attempt was made to place theatres on the same footing as cinemas, but the motion was rejected by a substantial majority; consideration of the Bill was not completed before the adjournment for the summer recess. Having regard to its controversial character, the National Government during the emergency session decided not to proceed with the measure, but, in order to regularise the situation, an Act operative for one year was passed, permitting those licensing anthorities which had during the past twelve months allowed Sunday opening for cinemas and concerts to continue their existing practice

#### SWEEPSTAKES.

HUGE sweepstakes (tickets row each) have been conducted within a year by the Irish Hospitals' Trust, a procedure legalised by the South Irish Parliament. The figures are as follows:—

Manchester November Handica	p, Nov., ro
Sales	
Hospitals received	131,784
First Prize	204,704
Second Prize	81,005
Third Prize	40,953
Grand National, March, 1931:	
Sales	1,755,063
Hospitals received	438,990
First Prize	354,544
Second Prize	177,872
Second Prize Third Prize	118,181

Epsom Derby, May, 1931:	
Sales	,780,696
Hospitals received	697,424
rg First Prizeseach	30,000
re Second Prizes ,,	15,000
19 Third Prizes ,,	10,000

Other prizes were distributed to holders of tickets for runners, sellers of winning tickets, and so forth. The draw on each occasion was done publicly with the aid of large machines for shuffling counterfolis of tickets, and everything was tried to obtain extensive advertisement. A party of M.P.s were special guests at Dublin during the draw. Owners of tickets living in England took over 60 per cent. of the Derby prizes, in spite of endeavours by police and Post Office officials to stop the sale of tickets. Other prizes were gained by holders an far apart as Mexico and New Zealand, the sales being worldwide.

#### SWEEPSTAKES FOR HOSPITALS.

The British Medical Association, at its Eastbourne Conference on July 20, 1931, lad two resolutions on the use of sweepstakes for lospitals, but did not record any definite vote, discussions being closured by motions to pass to next business. Dr. Brackenbury, Chairman of the Council, announced official countenance could not be given to sweepstake methods for helping hospitals. Mr. Clynes, then Home Secretary, mentioned at a public dinner on June 17, 1931, that Parliament was clearly dis inclined to change the law, however unsatisfactory it might be. The Canadian Parliament, on June 19, declined by 34 to 22 votes to give a hospital sweepstake Bill a second reading. The N.S.W. Government decided in June to run State lotteries for hospital funds.

#### TAX COLLECTORS.

DURING the passage of the Finance Bill in June, 1931, it was stated by the Chancellor of the Exchequer that, out of about 3,000 tax collectors, roughly 350 were under the direct control of the Commissioners of Inland Revenue, but that of the remainder about 2000 were parttime men whose salary or commission did not amount to more than £1 a week, their ages ran as high as 86 and ten per cent were over 70. Tax collectors in England and Wales have hitherto been appointed by the General Commissioners of Income Tax in the various districts or in default by the Commissioners of Inland Revenue, whereas in Scotland the collection has for half a century been carried out by permanent Civil servants. The principle underlying the method of appointment by the General Commissioners appears to have been that, to avoid giving the Crown and its servants too much ower in the administration of the Income Tax. the duty of assessment was placed in the hands of the locally elected and unpaid Commissioners. who with their officers were to assess and collect the taxes, the power of Somerset House being limited to the supervision of the collection in the interests of the Crown. In 1922 an attempt was made to abolish the assessor and to transfer his duties to the Inland Revenue, together with the appointment of collectors, but in the face of determined opposition the proposal was dropped. In 1931 the question was again considered, and successful negotiations took

lectors of Taxes with regard to the transfer of the appointment of collectors. The General Commissioners for a number of divisions, while advocating an improvement in the pay and status of collectors, passed resolutions urging the retention of the existing system, and representations were made from other quarters protesting against the removal of the buffer between the taxpayer and a bureaucracy, and pointing out that, if the collector were taken over, either the assessor must automatically follow or a separate office of assessor created, for which the remuneration would be insufficient, and that a case would then be made out for a similar absorption. The Finance Bill, 1931, however, contained a clause vesting in the Board of Inland Revenue the power in England and Wales of appointing collectors which, though strennously opposed during the debate on the Bill, duly became law. The City of London was excluded from the scope of this clause on the ground that about one-sixth of the total amount of tax was collected in the City, with the result that the system of collection had already been perfected, and that none of the criticism which could be brought against the present system in other parts of the country could be applied to that area. With this exception, therefore, tax collectors will, by a gradual process, become Civil servants.

#### THAMES BRIDGES.

## CHARING CROSS BRIDGE.

THE various stages of the protracted consideration of the problem of a new bridge at Charing Cross have been recorded in the ALMANACK since 1928. After the rejection of the London County Council's Bill by the House of Commons in May, 1930, the Council endeavoured to secure a flual solution by appointing an Advisory Committee in July, 1930, to submit within nine months an agreed scheme for a bridge and approaches at an estimated cost of not more than £12,500,000. The Committee was composed of 16 members, representative of all the interests chiefly con-cerned, with Sir Leslie Scott as chairman, and gave detailed examination to nine different schemes, of which six were selected and embodied in their report, but were unable to produce an agreed scheme; a majority, however, recommended the adoption of a scheme (known as No. 6) which, although it followed in some of its features the one put forward in the rejected Bill of 1930, was claimed to be sufficiently changed to constitute a distinct scheme. In view of claims that the character and cost of one of the six schemes had been misunderstood by the Advisory Committee, the Committee, at the request of the Conneil, gave further consideration to this scheme, but reaffirmed their previous decision. The Conneil then decided, in July, 1931, to obtain Parliamentary powers to carry out scheme Number 6 at a net cost of ing to contribute 75 per cent. of the cost, but were at once informed that the Government were unable to renew the offer of a grant from the Road Fund for the purpose; in coming to this decision the Government were mainly influenced by the serious economic position then developing, but also by the fact that no agreed scheme was forthcoming, and that future indicators on hand-worked machines would be events, such as a rapid development in the electricity discontinued. The deduction from the

place between the Board of Inland Revenue and | trification of main line railways, might pro-the National Association of Assessors and Col- foundly affect the considerations which would foundly affect the considerations which would determine the site of the railway station and the layout of the approaches on the south side of the river. There is, therefore, little likelihood for many years, if ever, of a new bridge at Charing Cross.

#### WATERLOO BRIDGE.

The fate of this bridge, which has been so long debated, is linked with the scheme for a new Charing Cross bridge. The Royal Commission on Cross River Traffic, in 1926, recommended that the bridge should not be demolished, but that four piers and arches should be rebuilt and the remainder underpinned; this decision was, however, contingent upon the construction of a new bridge at Charing Cross to relieve the congestion of traffic in the Strand. With the abandonment of the Charing Cross bridge scheme, apparently it rests with the London County Council to decide whether they will revert to their decision in June, 1926, before the appointment of the Royal Commission, to demolish the existing bridge and to construct a new one to take six lines of traffic.

#### I. PAUL'S BRIDGE.

To relieve the volume of traffic passing over London Bridge and Blackfriars Bridge, and the congestion of the streets in the vicinity of the Mausion House, powers to construct a new bridge were obtained by the Corporation of the City of London in 1911. The bridge approach was intended to pass from the south end of Aldersgate Street along the line of Old Change on the cast side of St. Paul's to the bridge head. In ross the London and Home Counties fraffic Auvisory Committee advised that the bridge should be proceeded with, and steps were taken to acquire the necessary property; but in 1926 the Royal Commission on Cross River Traffic urged the abandonment of the scheme in favour of a new Ludgate Bildge, to be a high-level road bridge passing from Southwark Street over the river, close to and east of the Southern Railway bridge, to Holborn Viaduct. The City Corporathen, however, after examining the proposed alternative were unable to agree with the recommendation, and in January, 1929, sought powers to extend until 1931 the time for the completion of the bridge authorised in 1921, but the Bill promoted to seenre the extension was rejected. Further schemes have since been put forward, and it is understood that the matter is still under consideration Considering the need for additional means of communication in the western part of the City, much dissatisfaction has been expressed with the decision of Parliament not to extend the time of completion of a scheme which had received its sanction after full mquiry many years before, and under which the City Corporation had made heavy commitments.

#### TOTALISATOR.

HOPED-FOR success has failed to materialise £13,500,000, subject to the Government agree- with the Totalisator on British racecourses. forced to announce in August, 1931, that with the exception of eight tracks (Ascot, Ayr, Birmingham, Hurst Park, Newbury, Newmarket, Nottingham and Wolverhampton) further em-ployment of the electrical machine would not justify itself for the present, and the electrical pools by the R.B.C.B. has remain d at we per cent., but from Aug. 31 instead of paying to the round sum as represented in pence, reversion was made to the old practice of the multiple of 3d, next below dividend. In some instances this is equivalent to 76 per cent. deduction. Ascots four days showed the biggest pools—\$44,\$52,\$2\$,\$55,042 xfs.,\$66,88 6s.,\$55,045 xfs.—the highest figure being on Gold Unp day. Machine was confined to rings, no facilities being provided for the lunge arowd on course. Year's report for 1930 was not lessued by R.B.C.B. until end of May following. There were a racecourses with the Machine that operated on 6x4 racing days. Total expenses to end of 1930 were \$650,124 for buildings and \$51,329,848 for electrical equipment: for the year, administration cost \$52,785 and total operation expenditure \$525,785. The total receipts, including pool percentages, were \$565,323. The most numerous patrons are holiday-makers with florin bets; the professional backers prefer the bookmakers, and often the turnover of one of the leading layers will exceed that of the Tote. Business improved in 1931; the turnover of 3% millions was reached by Oct. 100-101.

A question of legality arose over the Tote for the greyhound tracks, and to make the use of the Machine possible racing clubs have been established, membership of which permits betting with the Tote. The B.B.C.B. has no connection with the greyhound apparatus in either provision, control or profits. France has tackled the problem of getting bets made away from the course placed in the Machine. On March 3, 1931, 7 main and fe sub-squences were opened of the Fari-Mutuel-Urbain, wherehy people living in towns could have their bets transmitted to the racecourse. In Britain an attempt was made to send money by post direct to the Tote on racecourses, but this was declared illegal. By arrangement with the B.B.C.B., Tote Investors, Ltd., can accept bets on credit to be placed in course Machines.

#### TRADE DEVELOPMENT.

DELIGHT can be expressed at the greater linking up of industries and departments in industry for the purpose of common improvement in trade that found expression following the Missions of 1930, in various forms during 1931, and promise to extend in 1932.

#### COTTON

A Cotton Textile Exhibition, organised by the British Cotton Industry in conjunction with the Government, was held at White City, London, Feb. 16-28. Every section of the home cotton industry was represented, big fashion parades taking place daily with a view to interesting the public and other industries of the uses of cotton. The Queen honoured the Exhibition with a visit on the opening day. The actual net cost to guarantors worked out at £73,648, the industry considering the money well spent. A British Cotton Week followed on May 4-9, in which shops made a mass display of cotton goods with suitable posters and sold well. On April 4 the Cotton Mission (Sir E. Thompson, Chairman) returned to liverpool after having been away in the Far East from the previous Sept. 2. The reports were made public on April 33 and May 7. The Report pointed out that the Cotton Industry depended on foreign sales for 80 per

cent. of output. Lancashire's production had fallen from 8,000 million ilnear yards in 2522 to 4,000 million in 2500. In international trade Britain's sales had fallen from 85 to 45 per cent.; Japan's had increased from 3 to 77 per cent. British exports to China and Hongkong had been four times those of Japan in 2523, but only oue-tenth in 2500. Japan had become a closed market for Br.tish cotton. Though China is increasing her production, she is still a market provided our goods can compete in price with those from Japan. Lancashire had to reorganise and reduce costs if trade was to be recovered. Japan had lower wages and a double shift system, plus a greater output per weaver, who looked after more looms than was the British practice. At every stage, from purchase to packing, Japan had the price advantage. Our marketing was bad. Suggestions made included standardisation in goods offered, maintenance of stocks in China, organisation of a marketing body, long term credits, lut, above all, cheaper goods.

Lancashire has also suffered from a boycott of goods organised by the National Congress Paty. A protest meeting against the boycott was held by 7,000 members of the Manchester Royal Exchange on May 5. A Lancashire Cotton Corporation was incorported on Jan. 23, 1929, with the intention of rationalising the industry by the amalgamation of mills. The Corporation issued £5,000,000 64 per cent. debentures in March, 1931, amounting at the time that 72 mills have been taken over and 26 were in negotiation. The Bankers' Industrial Development Corporation made the issue through the Bank of England. A Lancashire Industrial Development Competition is educating public opinion to the need of more industries in the County Palatine.

#### WOOL

The Far East Economic Mission also dealt with the position of wool in China. The market was open, spart from the new tarriff, but it was a matter of prices, especially with the low silver figure. An imperial Wool Fair was organised by the Yorkshare Observer at Bradford in May, and this continued until the Bradford Pageant in July.

#### ARTIFICIAL SILK

An Exhibition of Artificial Silk was arranged by the Drapers' Organizer at the Albert Hall, Feb. 16-8r. Mr. Anery, M.P., presided at the opening, and The Queen hot oured the Exhibition with a visit on 19th. Great advances were shown in uncrushable cloths and dyes.

#### LEATHER.

A market enquiry was ordered in Sept. on behalf of the leather trades exporting to Denmark and Netherlands, the Overseas Trade Dept. co-operating with the National Leather Goods Association.

#### CANADA.

Federation of British Industries sent a Trade Mission (Sir J. Lithgow, Sir A. Duckham and Mir. M. Mackenzie) to Canada at Invitation of Mir. Stevens, Dominion Trade and Commerce Minister, April-May. The report stated cooperation between home producers in building up a selling and service force was essential to meet competition from foreign countries.

Baster communications, uniformity of statistical publications within Empire, liaison between strong economic and investigatory committees, need of sympathetic touch between Governments, publicity, flow of home investment moriey to Canada were amongst recommendations. Britain's strongest competitor, U.S.A. had the advantage of being on the spot. Earl Jellicoe opened the gard Annual Canadian. National Exhibition in Toronto on Aug. 28, at which certain home manufacturers were represented. A World's Grain Exhibition is to be held in Regina in 1922.

#### EGYPT.

A Trade Mission, Sir Arthur Balfour as Chairman, issued its Report in May covering its visit to Egypt, Jau. 31-Mar. 14. Recommendations included: Complete overhaul of production costs. U.K. manufacturers should study more on the spot the desires and tastes of Egyptians, standardisation of goods with organised trade marketing, knowledge of local languages with vernacular printed catalogues, holding of stocks locally and employment of canema films for publicity. Share of trade in Egypt had fallen with British goods from 30°5 per cent in 1913 to 40.38.

to 44.8.
The British Africa Industrial Development Expedition opened in Carro on July 27 with exhibits from 65 home firms, and proceeded later to Alexandria and then to the Cape, using a motor convoy for travelling Lurioses.

#### SOUTH AMERICA.

H.R.H. Prince of Wales (accompanied by his brother, H.R.H. Prince George) made an extended tour to South America, Jan. 18-April af, during which he acted as the Empire's Trade Ambassador. He visited Peru, Bolivia, Chile, Argentina, opening at Buenos Aires on March 14 the British Trade Exhibition. Over 1,000 British and Domilion firms were represented at this B.T.E., the value of the exhibits being £5,000,000. Everything that might be provided by Britain to help Argentina in her development was shown. In the six weeks of the Exhibition, 1,300,000 visitors passed through the turnstites. A Sheffield Mission had toured South America in the previous winter, making calls upon 43 importers and interviewing 79 officials and ministers. Recommendations were—industries should arrange for group representation, a special Trade Commissioner to follow up the Mission, and meeting of requirements in the way of cheap cuttlery.

# FLOATING EXHIBITION.

Lord Auckland was instrumental in the purchase of the S.S. Leteester shire from the Bibby Line for the purpose of fitting the vessel out as a Floating Exhibition of British Industries. She was renamed the British Exhibitor by Lond Derby on July 20, and was due to sail for South America on Nov. 1. Apart from individual exhibitors, chemical, furnishing and Birmingham jewellers were being represented collectively.

#### IDEAL HOME EXHIBITION.

The interest shown by the public in the Daily Mail Ideal Home Exhibition at Olympis, held during April, is a distinct pointer to increased trade possibilities. During the 23 days of the Exhibition 566,969 people paid for admission, an

increase of 49,852 above previous record. A large volume of sales was done by exhibitors.

#### TELEPHONES.

Britain has not developed the use of telephones to the extent associated with the leading nation of the world The spoot, cool installation was, celebrated by the G.P.O. in June, 1931, with the acceptance of a special micro instrument by the King for Buckingham Palace. A net increase of over 9,000 subscribers is being made monthly, being the trunk calls exceed 10,000,000 monthly, being an increase of over 2 per cent. on 1930's figures.

## BRITISH INDUSTRIES FAIR.

British Industries Fair was held in London (Olympia, with x,xxx exhibitors of lighter manufactures, occupying 300,000 ft. space; White City, with cotton textiles from aso firms; Royal Albert Hall. for artificial silk goods, and Birmingham (Castle Bromwich, for heavy goods), Feb. x5-a8. Combined attendances of Olympis and White City were x50,05x home buyers, 4,856 overseas buyers, and 33,844 general public (non-purchasers in evenings only). Birmingham's figures were—x04,838, x 865, x50,000. The Queen, Duchess of York and Duke of Glomester paid visits. Large business was reported, the biggest order numerically being nine million jam-pot covers worth £xx,000. The Fair not only means business on the spot, but the establishment of contracts that lead to orders later. The Empire Marketing Board with the Dominions was strongly represented Arrangements for x93x Fair, that will open on Feb. 2x, include a special section for the whole Textile Industry at White City and a big extension at Birmingham to permit a letting space ander cover of a quarter of a million square feet. A Committee was appointed in Msy, x93x, with Sir G. Garusey as Charman, for the purpose of securing permanent accommodation for the London Section and placing the Fair on a self-supporting basis.

#### TREASURE TROVE.

An official notice was circularised through the British Museum in March, 1931, calling attention to the Laws applying to Treasure Trove. Gold and silver objects found in land or buildings and and sheer owners become treasure trove, and thus the property of the Crown, Prompt notification of the discovery will lead to either purchase of the articles at market value from the finder, or the goods returned to him if not wanted by the Authorities, in the latter case, the British Museum will attempt to find a buyer, should finder desire The local ('oroner is the official to be advised under the Act of 1887, and he is the Authority who conducts the enquiry mto the finding and declares objects to be treasure trove. Finds in other metals or of ancient objects are not freasure trove, but in the interests of knowledge such discoveries should be described and reported to the British Museum, the Director being in a position usually to suggest a method of disposal if desired Under an old Treasury Minute of 1886, finders received only four-fifths or nine-tentles of the value The removal of this deduction should mean less retention and secrecy of discoveries.

#### THE 24-HOUR CLOCK.

DURING the past few years efforts have been made by the Royal Astronomical Society and others to secure the adoption of the 24-hour

method of expressing time; the change was recommended by a Home Office Committee as far back as 1912. On the Continent the use of the system on the railways and in post offices is familiar, while in England it is already used in Army, Navy and Air Force instructions; an example of its usage for the expression of times of high water, sunrise, sunset and astronomical phenomena generally may be found in the early pages of this ALMANACK. The adoption of the system nationally hinges upon its acceptance by the Post Office and the railway companies, and the assent of the latter has been made conditional upon a general desire for the change. The subject has been discussed in the House of Lords on more than one occasion, and in May, 1931, Lord Newton moved that the Ministry of Transport should invite the railway companies to adopt the s4-hour method from a certain date, and that it should be simultaneously introduced into the Post Office; careful and sympathetic consideration of the question was promised by the Government. The advocates of the change point out that the official use of the system for time-tables, notices and formal statements would not necessitate its use in ordinary conversation, and that alterations in the dials of clocks and watches would be unnecessary, but, if desired, the numbers 13 to 24 could easily be added to the numbers 1 to 12. The expression of a general and compelling demand by the public for an alteration of the present system is not easily conceivable, unless a definite lead is given by one or other of the interests mainly concerned.

#### UNEMPLOYMENT.

THE whole world seems to be faced with an unemployment problem. Not only has there existed a surplus of labour, but those in work have made a surplus of production. Consumption has not kept pace with machinery increase. In theory, the world solution seems to he in distributing the work available to all, thus leading to a shorter labouring week with the possibility of the majority having to lower their possibility of comfort to raise those of the minority. In Feb., 1931, the International Labour Office reviewed the problem, but could only pass it on to the next assembly. On July a the Geneva Unemployment Committee suggested an international exchange of workers, a placing conference, using idle money on public works, international co-operation in works essential to European economic development, and long term credits for transfer of surplus labour to land likely to absorb it. These proposals arose out of the enquiries into Mr. Briand's scheme of European Union.

Britain.-As will be seen from statistics that follow, unemployment has grown with sevenleague boots. The sole reason is lack of markets abroad for manufactured commodities. Overseas countries have not had the means for purchasing countries have not near the means for purchaseing our products. Either goods that we used to supply have been prepared locally at cheaper rates, or our prices have been underout by competitive producing countries, or our manufactures have come within the luxury class and thus to be avoided in days of essential economy. Hope for the future lies in better methods of manufacture and merchandising with decreased selling prices, consequent upon lowering of production costs, plus the removal of the tariff walls that automatically raise the price of our Ministry of Labour reported 530,000 unemployed.

goods sent to the countries so surrounded. Failure to sell abroad has meant in turn less money for spending here; that in its cycle has rendered more would-be workers unemployed. Inland trades that have suffered most are and traces that have sunered most are shipbuilding (sg per cent. unemployed), steel and iron mills (45), cotton (42), docks (40), coal (32). Least unemployment has been in the internal transport, printing, tobacco, electricity, gas and water supplies, and especially with train and 'bus men and commercial clerks. London and Southern areas have shown the biggest increases in unemployment, but these have still the fewest unemployed. The Unemployment Fund has been spending over a million more weekly than has been received as contributions, borrowing powers of the Fund being increased to £90,000,000 (March Act) and £115,000,000 (July Act). The advent of the National Government led in September to a decision not to borrow again, but to increase contributions and reduce benefits, whilst transferring those showing signs of being permanently unemployed to the Public Assistance Committees.

Weekly registrations by the unemployed at the Labour Exchanges have been as follows:—

Inte (1931 )	Male.	Female.	Total.	Total in previous Year.
Jan. 26 Feb. 23 Mar. 23 April 27 May 18 June 22 July 27 Aug. 24 Sept	a,ox6,998 a,oay,730 x,967,988 x,957,x05 a,o68,078 a,xay,615 a,xay,615	624,858 620,811 638,723 678,860 694,834	2,592,780 2,577,916 2,706,795 2,806,475 2,813,163	1,911,749 2,070,088 2,119,648 2,188,400

Australia. - Second quarter of year showed ay 6 per cent. of trade unionist unemployed. Fremiers' Conference in Sept., 1931, asked Commonwealth Bank to supply further £5,000,000 for loan works, then giving employment to zoo,coo.

Canada.-According to firms reporting to Statistics Bureau, there has been slight employment increase from 1926. On Sept. 4, 1931, Total relief was £14,000,000 in 1930, but 1931 winter expected to be worst with 150,000 drought-stricken Western farmers. Much public work in hand.

France.—Though unemployment returns show only 50,000 on exchange registers, short time working is in evidence. In July, 1931, 32 per cent. were working under 48 hours weekly.

Germany.—On Oct. 1, 1931, unemployment benefit was reduced from so to so weeks (seasonal trades 16) in view of an increase of unemployment to 6,500,000 in winter. Government Commission recommended in April, 1931, 40-hour week, no overtime and no double jobe as solution; Horr Stegerwald, Labour Minister, at Aug. Congress of General Federation of T.U., favoured some form of short time provided exports were not interfered with. He thought £100,000,000 would have to be raised for relief works before Mar., 1932.

New Zealand.—Camps are being formed for single men to be given work constructing roads and preparing lands for settlements, with Unemployment Board as controlling authority. Last available unemployment registration figure was 45,364.

U.S.A.—President Hooverannounced on May 2, 1931, he did not propose to call an extra session of Congress to deal with the economic situation.

"We cannot legislate ourselves out of the world economic depression. We can and will work ourselves out." By Sept., 1932, relief expenditure had been authorised for £18,000,000, apart from private and State schemes on building and roads. Mr. G. Swope, G.E.C., has a proposal in hand that is securing much support for regulation of production according to consumers' needs, with guarantee of involuntary idleness to workers. He includes a contributory unemployment insurance scheme.

## WATCHING THE COAST.

THE coast-watching organisation of the Coastguard Service was described as "thoroughly efficient and adequate for the requirements" by a departmental committee appointed by the Board of Trade as the result of the suggestion of a Court of Inquiry into the loss of a vessel At the same time the committee made a number of suggestions for improving the service. Thev expressed the opinion that the retention of coastguard stations on unfrequented parts of the coast merely to maintain continuity of the watching organisation could not be justified, and they recommended that such stations should either be closed or reduced to auxiliary stations for use in bad or thick weather only. station is on an important traffic route, overlooks serious navigation dangers, or supervises the work of a busy fishing port, harbour or area, the employment of full-time personnel on coastwatching duties at the expense of the State, they declared, could not be justified, and if local authorities desired a watching organisation for the protection of pleasure craft at seaside resorts, it was not unreasonable that they should themselves bear the cost of providing and maintaining the necessary look-outs. The committee proposed that the system of arranging stations in groups (usually of three stations) and placing each station in turn on night watch in fine weather should be amended, so that only those stations which afford the greatest amount of supervision of the coast and sea should undertake the

necessary duties for a group of stations. The system whereby watch is kept from look-out huts is, in the committee's opinion, preferable to keeping watch by means of watchmen on patrol. They proposed to reduce the number of coastguard stations from sgs to sry and to increase the auxiliary stations from 65 to 14s. The total look-out positions would not be less than at present, but the coastguard personnel would be gradually reduced from 820 to 772. The report of the committee added that, at their request, the Board of Trade had developed a scheme for raising the general status of the auxiliary service and organising it in a Coast Life-Saving Corps, which they thought would materially add to the efficiency of the service. The Corps would be enrolled on a voluntary basis and would comprise life-saving appliance men, coast watchers, and an intelligence section, the groups in some cases including women. As many of the helpers would be working people, it would be necessary for the Board of Trade to provide for the adequate remuneration of the members of the Corps, but the additional cost would be offset by savings secured from the reduction of coastgnard stations and personnel. Another recommendation was that each district should be supplied with one or more lambs capable of throwing a good beam for soo or sgo yards, while it was niged that powers should be obtained by the Board of Trade to compel the owners and masters of all vessels employing paid hands to carry efficient distress signals. Finally the committee expressed the view that, with the further development of wireless telegraphy and telephony, the need for visual watching should gradually be reduced

#### WEIR REPORT.

IN Sept., 1929, the Minister of Transport appointed a Committee of three (Lord Weir as Chairman, Sir Ralph Wedgwood and Sir William McLintock) to examine the "conomic and other aspects of the electrification of railway systems in Great Britain, with particular reference to main line working." The Committee held 3r formal meetings and heard 19 witnesses. Their report, known as the Weir Report, which was issued on April 28, 293r, pointed out national generation of electricity at low costs constitutes a new favourable factor in favour of electrification, an efficient railway system is essential, and electrified suburban lines are being successfully worked. After observing that the increased demand for electricity would cheapen its supply for industry, and acceleration of rural electrification would follow its application to railways, the division of work was suggested that the Central Electricity Board should provide transmission lines and equip the sub-stations, with the latter controlled by railways. There were to be no half-measures; success would lie in a comprehensive scheme, leaving out only branch lines that might be worked more profitably by other haulage methods. Direct financial economies would follow from electrification, whilst speed, comfort, improved service and tage would lie in dependence on the centralised electrical sources of supply.

electrical sources of supply.

Working out in practice would call for zs-ze years' programme and an expenditure of £z6z,000,000 approximately. Gross aggregate costs were estimated at £zzz,zo,000, against which there would be realisable credits of £6z,z80,000. The Central Electricity Board

would be called upon to spend also £80,000,000 for generating plant, lines and stations. Taking for generating plant, lines and stations. Taking a year's budget, railway working costs would be reduced from £52,502,702 (plant cash), thus making a saving of £12,325,702 (plant cash haulage charges of £25,200) a year. This would be equivalent to 6'12 per cent, on the cost of £25,200,000. Though the bulk of the savings were in connections with unwanted labour. the railway trade tion with unwanted labour, the railway trade unions at their Conferences welcomed electrification. It might be noted that the Southern Railway has in hand a main line electrification scheme between Loudon, Brighton and Worthing;

mission to driving-wheels. But experience in that was limited, and might be less economical on well-loaded lines. An independent scheme of railway traction by Diesel-oil-locomotives was submitted to the Ministry of Transport in Aug., 1921, in which it was set forth that the cost of oli-electric working would be £124,000,000 compared with the £244,000,000 for the electricity change-over. A list of advantages of the oil system over the electricity grid was set out, but against these needs be placed the statement in the Weir Report that preference should be given to a system using coal rather than oil as being in national interest.

this will be completed early in 1933 to remaining afternative to steam haulage, other than electricity, was the oil engine with electrical trans-

# Annual Summaries.

# THE WEATHER OF 1930-31.

(1930) October was mild in all parts, and on the 18th. The month was on the whole especially so during the third week. The month was wet in Scotland, Ireland and the western of Great Britain, but in Ireland and the west of districts of England and Wales, but in the east of Scotland there was a well-defined deficiency of England it was both dry and sunny. The month opened generally cloudy and dry, but bright periods occurred in the east and south-east. On the and rain began in the south of reland, and during the night of the 3rd to 4th and on the 4th heavy falls occurred in many parts of the British Isles. This rain marked the beginning of a spell of unsettled weather. which continued almost unbroken until the end of the month. There were, however, some bright periods, especially on the 6th and 5th. Some snow occurred on the hills in Scotland on the oth, and severe ground frost occurred at many places during the nights of the 8th and oth and the oth and roth. During the period roth to 13th an anticyclone caused more settled conditions over the greater part of England, and good sunshine records were obtained in many places, but the unsettled weather with rain at times continued in Scotland and Ireland. From the 15th to 17th some unusually high tem-peratures for the time of the year were recorded, maximum temperatures of 65° F. and over in most parts of England and 70° F. in London on all three days, while night minimum temperatures on the 15th or 16th did not fall below 60° F. at places as far apart as Manchester, Ross-on-Wye and Margate. Rain occurred at most places during this period. On the soth con-ditions changed, and during the next six days cool, squally, north-west winds, with occasional local thunder and hall, and gales on the atth and agth, were experienced. The coldest days were from the atth to syth. A renewal of the mild weather occurred on the asth. On the 30th and ast cold air again reached Scotland, but the weather continued mild in England. Monthly means of pressure were below the normal in all districts, while the prevailing winds were between south and west. Among the highest gusts were 69 m.p.h. at Butt of Lewis and Pendennis Castle 69 in.p.h. at Butt of Lewis and Pendennis Castle on the 31st, and 67 in.p.h. at Lerwick on the 30th. Monthly mean temperature was above normal in all parts, especially in the east and south of England. The extreme temperatures of the month were (England and Wales) 7r. K. at Canterbury on the 27th, and 23° K. at Rickmansworth on the 27th, and 24° K. at Rickmansworth on the 27th, and 24° K. at Braemar on the 31st; (Ireland) 65° K. at Dullin (Trinity Cellege) on the 24th, and 33° F at Ballinacurra on the 50th and at Lisburn and Dublin (Phonix Park) on the 31st. The month was wet in the Park) on the sist. The month was wet in the western districts of Great Britain and in Ireland, and dry in the east of England. Over the British Isles as a whole the precipitation expressed as a perceutage of the normal for the period 1881-1913 was 179; the values for the constituent countries were: England and Wales 97, Scotland 194, Ireland 164. This is the fourth consecutive mouth when the general precipitation over Ireland has exceeded the normal. The distribution was very uneven, for while less than half the normal fell in the east of England, nearly twice the normal fell in parts of Cumberland, and in Scotland near temperatures were berland, and in Scotland 14-36 inches fell at Smeaton. In Scotland, and over the country as a Glenbranter, but only regained fell at Smeaton. The heaviest daily fail was a Sc inches at Ardgour. In most parts of England and Wales and

Southant there was a well-defined deficiency of bright sunshine. Fog was most widely reported about the 4th, 19th and from the 19th to 19th. Aurora was observed in Southand on the 19th, 19th, 19th, 18th, 19th, 19th and 19th, 19th that of the 19th was seen as far south as Market Harborough and Norwich.

Norenber was generally wet, especially in England and Wales, where the general precipitation was one and a half times the normal. In spite of this, however, sunshine totals were in excess of the normal. The month opened with mild, rainy conditions, with local mist or fog. On the and a violent squall crossed southern England, its passage being accompanied by severe thunders to passage temp accompanion by severe thunders to places, and gusts of 8s m.p.h. at Cardington, 78 m.p.h. at Scilly, and 77 m.p.h. at Shoeburyness were recorded. Considerable sunny periods occurred on the 4th and 5th. A depression off the south-west coast of Ireland on the morning of the 5th moved south-eastwards, and in the extreme south there was much cloud and rain. The 6th was generally sunny, cloud and rain. The 6th was generally sunny, many places recording more than 8 hours bright sunshine. From the 7th to 9th an unsettled westerly type of weather prevailed. Much rain fell in Scotland and Ireland on the 7th, and widely during the night of 7th to 8th. From the noth to 13th mainly dry, sunny weather prevailed in the south and east, but the northwest came under the influence of an Icelandic depression, and though there was not much rain. dep. ession, and though there was not much rain, the wind was frequently strong, gales occurring in exposed places on the roth, rath and rath. On the rath many places on the south coast enjoyed over 8 hours sunshine, and maxima reached or exceeded 60° K at many places. There was rain in Scotland on the rath, and general rain on the rath. A mainly rainy and generally dull period occurred from the rath to still the ray united in averagination and acth. Heavy ian fell in several parts on each day except the ard, which was annuy, but heavy falls occurred in the south-west during the night of the 23rd to asth. Gales occurred along parts of the coast, mainly in the English Channel, between the sand and agth. How occurred generally in Scotland on the sand, and thundersolution in the same and the series are storing were reported in southern England on the sist, sand and soft. During the period syth to soth improved conditions, with much sunshine and local night fog, were enjoyed in the north and west, but in the south there was still much rain at times. Cyclonic conditions pre-dominated during the month, and for the fifth consecutive month pressure means were below the normal. Winds were mainly westerly and were frequently strong. Gales were widespread on the and and ard, in the south-west on the sth to 8th, parts of Scotland on the 8th to zeth, widespread on the saud to ath, and in the south-west on the sath and asth. Among the highest gusts recorded were 84 m.p.h. at Kirkwall and 79 m.p.h. at Butt of Lewis on the zoth, 79 m.p.h. at Pendeunis on the sath, 78 m.p.h. at Soilly on the and and at Birmingham on the sand. In Scotland mean temperatures were

Ireland the mean was within 1° F. of the normal. The extreme temperatures for the month were (England and Wales) 64° F. at Shaftesbury on the 44th, and 13° F. at Rickmansworth on the 74th, (Scotland) 64° F. at Stonehaven and Aberdeen on the 13th, and 14° F. at Balmoral, Braemar and Logic Coldstone on the 18th; (Ireland) 64° F. at Waterford on the 9th, and 13° F. at Markree Castle and Birr Castle on the 74th, at Phomix Park on the 17th and 88th, and at Foynes on the 29th. The general precipitation over the British Isles, expressed as a percentage of the normal, was 128, thus exceeding the normal for the fifth consecutive month. For the constituent countries the values were: England and Wales 132, Scotland 134, Ireland 110. Over England and Wales 132, Scotland 134, Ireland 110. Over England and Wales 132, Scotland 134, Ireland 110. Over England and Wales 132, Scotland 134, Ireland 110. Over 138, 111, in 1388, 1925 and 1393. Among the largest daily falls were 95 mm. at Kinlochquoich on the 14th, 81 mm. at Ardgour on the 8th, and 43 mm. at Princetown on the 3th and 137d. At Glenquoich there were four days on which more than 50 mm. fell, and at Baltasound and Gruiline rain fell on each day of the month. In spite of the excessive rainfall, sunshine totals were generally well above the normal, especially in the eastern parts of Great Britain. Fog was reported on as many as 19 days in Manchester, 16 at Hull, and 10 in London. Aurora was observed in Scotland on several occasions, and as far south as Eskadlemuir on the 37d and 36th. Solar haloes were observed at Oxford on 12 days. On the 27th the solar halo of 20° was visible practically all day, with contact are about 15.45 CM.T. December was dull and mainly rather mid,

December was dull and mainly rather mild, with frequent mist and fogs. During the first six days of the month a persistent ridge of high pressure gave quiet, dull and dry weather generally. With the passage eastwards of a trough of low pressure, fairly heavy rain fell in the west and north-west during the night of the 6th and 7th and in most places on the 7th. Unsettled conditions prevailed until the 17th, during which period frequent but generally slight precipitation occurred. Snow or sleet occurred in the north on the 8th and locally in England on the 9th. The sharpest frost of the month occurred on the morning of the 18th. During the night roth to 18th and occurred in the west and south-west and extended to most districts on the 18th Agles were reported from exposed places on the 18th, and from then until the 18th mild, rainy conditions with bright periods prevailed. Fog was widespread on the 18th, and in the east and south-east day temperature was only a few degrees above freezing. From the 18th to soth mild south-westerly winds spread over the country, and day temperature rose above 50° F. in several places, and in most parts the highest temperature of the month was registered during this period. On the sand an anticyclone extended over the British Isles, and in several places in Eugland dense and persistent fog, with maximum temperature below 40° F., were reported on that day. From then until the end of the month depressions of increasing intensity crossed the country from the Atlantic, bringing generally unsettled weather, heavy rain or suow at times, but periods of bright sunshine, with temperature above normal. The Christmas period was mainly mild, with rain at times, and bright sunshine, although snow fell heavily in parts of north-eastern England on the 5th. Gales occurred generally in the west and north on the 5th and 27th and over southern

districts on the a8th. Rain fell heavily in the west and north on the a8th, when 83 mm. fell at Borrowdale (Cumberland) and 75 mm. at Penrhyn (Carnarvon). In Scotland and Ireland mouthly pressure means differed as a rule by less than : millibar from the normal, and in England generally to a millibara below the normal. Winds were mainly southerly or westerly, and with the exception of gales about the 11th to 13th and exception or gaies about the first to figure and seith to sixt were generally light to moderate. Among the highest gusts recorded were & m.p.b. at Butt of Lewis on the seth, & m.p.h. at Tiree on the seth, and 77 m.p.h. at Quilty on the first and at Dunfanaghy on the seth. The month was on the whole mild; the mildest days occurred generally the host ships of the worth and shout the ally at the beginning of the month and about the atly at the beginning of the north and about margin 13th, 13th and 13th. The extreme temperatures of the month were (England and Wales) 60°F, at Rhyl and Colwyn Bay on the 18th, and 16°F, at Bellingham on the 10th; (Scotland) 56°F, at Aberdeen and Stouchaven on the 18th and Gordon Cartheles and Stouchaven on the 18th and Gordon Aberdeen and Stonehaven on the 18th and Gordon Castle on the 19th, and 12°F at Braemar on the 19th; (Ireland) 90°F, at Newcastle (Wicklow) on the 18th and at Blacksod on the 18th, and 18°F; at Dublin (Glasnevin) on the 19th. Rainfall was generally about normal, the percentage values of the normal being: British Isles 99, England and Wales 99, Scotland 97, Ireland 19th. The distribution was rather uneven, for while Skegness had only 20 per cent. Cromer 28 and Killylaser. had only 52 per cent., Cromer 72, and Killybegs (Donegal) 63 per cent., Balbriggan had 140 per cent., Blacksod 118 per cent., and parts of Wales 125 to 150 per cent. At Rothesay rain fell on 30 days, while at Kinlochquoich there were 8 days with over 25 mm., the wettest being the 15th with 76 mm. Sunshine aggregates were below normal in almost all parts of England and Wales. In Scotland there was in general a slight excess, except in the south, whilst in Ireland aggregates were as a rule above the normal in the south and west, and below the normal in the east and northeast. The dull character of the month over the greater part of England is indicated by the large number of sunless days; at Huddersfield there were as and in London and Bradford there were 23 days with no bright sunshine Fog was unusually prevalent throughout the month. It was observed in the mornings on 27 days at Hull, 24 days at Nottingham, and 16 at Kensington; in the early afternoon it was reported on 12 days at Harrogate and 11 at Greenwich. The fog in and around London on the sand was one of the most dense of recent years, and caused serious dislocation of all transport services. At Southampton, on no day during the month did the visibility in the morning or evening exceed 6½ miles. Aurora was observed in Scotland on 7 occasions. On

rora was observed in Scotland on 7 occasions. Unter soth it was visible over the greater part of the country. Solar halo, with parhellon, was observed at Oxford on the 9th, 12th, 14th and 28th. Year, 1930.—The outstanding feature of the years weather was its persistent and excessive wetness, the annual rainfall exceeding the normal almost everywhere. Apart from a short hot spell at the end of Angust, during which 94° F. was recorded at London (Camden Square), the highest in the British Isles since July 12th, 12p3, when 96° F. was recorded at the same station, there were no conspicuous departures from the normal. There were no prolonged and intense cold spells. Sunshine aggregates were in general deficient. The annual pressure means were from 2 to 3 millibars below the normal. Among the outstanding gales of the year were those of January 1st to 3rd and 1sth. On the

and a gust of 9x m.p.h. was recorded at Liver-pool, and on the xath xes m.p.h. at Pendennis, and 97 m.p.h. at Scilly, with mean hourly wind and sy m.p.h. at Scilly, with mean hourly wind
of 53 and 55 m.p.h. respectively. Annual mean
temperatures were slightly above normal, in the
majority of districts by less than z° F. The
extreme temperatures of the year were (England
and Wales) 94° F. at London (Camden Square)
on August 24th, and 3° F. at Newport (Salop) on
August 24th, and 4° F. at Braemar on February
gth; (Ireland) 3r° F. at Nowcastle (Wicklow) on
August 24th, and 27° F. at Markree Castle on
February 25th. The year was a wet one; with
the exception of the north-western scaboard and the exception of the north-western scaboard and small areas in Scotland, English Lake District and the Thames Valley, all districts had an excess. The general precipitation expressed as a percentage of the normal for the period a percentage of the normal for the period rass-rags was: British Isles xxx. England and Wales xxx. Sootland xxo, and Ireland xx. Some memorable incidents of the year's rainfall were the thunderstorms near likley on April agth, in which 47 mm. of rain and hall fell in 30 minutes, the thunderstorm rains of June x8th, which in London, following heavy rain on the previous day, caused severe flooding. on the previous day, caused severe flooding and dislocation of traffic, and the persistent cyclonic rains of July 20th to 23rd near Whithy, during which 304 mm. fell at Castleton in the Yorkshire Wolds. Aurora was observed in northern districts in each month except during the worlds. The contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of t the months June to August. January was abnormally mild, wet and stormy, with destructive gales in the south on the rath. After the first few days anticyclonic conditions prevailed during February. There was a pronounced frequency of winds between north and east and There was a return to unsettled mild conditions at the beginning of *March*, but after the first week a complete change occurred, and from the oth to agrd the British Isles lay in the broad Arctic current between a high-pressure system artuc current between a nigh-pressure system to the west and a low-pressure area over north-west Europe. After the sard conditions became mild and wet and continued on into April; from the ard to yth and again from about the rath to aret, which period included the Easter holidays (April self-baset) which are the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than (April 18th-21st), cold winds between north and east and wintry, dull weather were prevalent. The last week was considerably warmer. May was generally dull and wet in the south-east of England, but dry in most other districts. In England, but dry in most other districts. In contrast to the dullness of the preceding months, June was sunny, with frequent moderately warm days and nights, a deficiency of rainfall except in parts of Sectland, and frequent thunderstorms from the xath to 19th and on the 23rd and 24th. July was generally unsettled, dull and wet. Mainly cool, wet and unsettled weather prevalled in August, but from the 26th to 29th the most her was numerally hot and sunny in most. weather was unusually hot and sunny in most parts of Great Britain. September was chiefly remarkable for its excess of persistent raunfall in all districts except in the north-west of England and west of Scotland. Sunshine was very much below the normal in Great Britain. The

nuch below the normal in Great Britain. The last three months of the year were on the whole mild and mostly wet, with much fog in December. (xgax) January.—The first half of the month was cold with much fog, and the second half mild, windy and wet, with fairly heavy rain during the last week. Bright periods were, however, frequent; a prominent feature of the month was

the excess of sunshine recorded in most districts. The month opened with thick fog locally and ane month opened with thick fog locally and low temperatures. During the period 5t to 5th severe frost occurred, both in the screen and on the grass. By the rith mild conditions became general, with temperature reaching 50° F. at some places. From the right to right northerly winds and wintry precipitation prevailed generally, but many good sunshine records were obtained in many parts of England on the right. Wasterly in many parts of England on the 14th. Westerly to north-westerly winds prevailed from the 15th to nother western with gales on the 16th and 17th and snow in northern districts on the 18th and 19th. Heavy rain occurred during the night 22nd to agrd and on the agrd. The period a4th to syth was mainly sunny, over 7 hours bright hunshine being recorded at several places, and on the a5th as much as 8 hours at Ross-on-Wye, a record at that station for a January day. The last two days were rather cold except in the south-west and in Ireland, and on the 31st there were further gales and heavy snow in the north and west. With the exception of south-west Ireland, mean monthly pressure was below the normal. Winds monthly pressure was below the normal. Winds were mainly between south-west and north-west and frequently strong during the second half of the month. Generally the highest wind velo-cities were recorded during the westerly gales on the r6th and zyth. Among the highest guts of the month were \$5 m.p h at Bell Rock on the zyth, \$3 m.p.h at Butt of Lewis on the r6th, 78 m.p.h. at Tiree on the r6th, and 76 m.p.h. at Fleetwood on the zyth. Mean temperatures for the mouth were generally within z² F. of the normal. The extreme temperatures of the month were (England and Wales) 55° F. at Dover on the 16th, and 50° F. at Newport (Salop) on the 5th; (Scotland) 55° F. at Cupar on the 16th, and 60° F. the standy 55. At comparison the rectification of the standy 55. F. at Blacksod Point on the 16th, and 20. F. at Newtownforbes on the 3rd and at Lisburn on the 6th. Precipitation occurred frequently during the month, but was generally light, the only falls of importance occurring about the a3rd and during the last week. The general values expressed as a percentage of the average were. British Isles roy, England and Wales zos, Scotland 1848, and Ireland 88. Among the largest daily falls were on mm. at Garelochhead and 64 mm. at Ard-tornish and Princetown on the 31st. At Strathpeffer the monthly total of 6 43 inches was the highest for January there since before 1885. Sunshine totals were in excess of the average, and expressed as a percentage of the average ranged from 158 per cent. in the north-east of England to roz per cent. In north of Scotland and the Channel Isles. The month was the sunniest January at Ross-on-Wye since 1914 and at Eskdalomuir since 1910. Aurora was observed in Scotland on the night of the 19th to 16th. February. — Squally, westerly or north-westerly winds and frequent wintry precipita-

February.— Squally, westerly or northwesterly winds and frequent wintry precipitation were the chief features of the month. On the rat gales prevailed 12 western districts, and then until the 5th quiet, cold weather, with north-easterly winds and varying amounts of sunshine, prevailed over the greater part of the country. During the night of the 5th to 6th and on the 6th rain or snow was widespread. Mild weather was general from the 5th to rath. There was heavy rain in western Ireland on the night of the 7th to 5th, and over the country generally on the night of 5th to soth and on the 11th. In the rear of a depression which crossed the country on the 12th strong north-westerly

winds, reaching gale force in exposed places. winem resoning gais force in exposed piacos. In the north and west there was hall, sleet or snow. The acth was sunny, many places in south-east England recording over 8 hours bright sunshine. On the acth an anticyclone over the Bay of Biscay spread northwards, bringing with it air of tropical origin; and temperature rose to an unusually high level, ac 92 at Workson and ac 9 at harvies. On the So F. at Worksop and 99 F. at Aberdeen. On the sth the winds veered north-west, and another cold spell ensued, and locally in the Midlands temperatures did not exceed 30 F. on the seth. Gales occurred in the north and west on the seth. and on the evening of that day snow fell generally over the whole country. With the exception of the extreme south of Ireland and the Channel Isles monthly pressure means were below the normal. The prevailing wind was westerly, and frequently strong and squally. The highest gusts recorded during the frequent rne ingness passe recorded during the frequent gales were 87 m.p.h. at Butto I Lewis on the zyth, 79 m.p.h. at Tiree on the zath, Scilly on the zt, and at Lerwick on the zath. Monthly mean temperatures were generally within z° F. of the normal. The temperature readings for or the normal. The temperature readings for the sath at many places were the highest in Rebruary for several years. Ground frost occurred frequently in most districts. The extreme temperatures of the month were (England and Wales) 60° F. at Worksop on the agid, and 12° F. at Rickmansworth on the asid; (Scotland) 12° F. at Abadian 24. (Scotland) 50° F. at Aberdeen on the 25th, and 9° F. at Dalwhinnie on the 23th (Ireland) 59° F. at Newcastle, Wicklow, on the 2th, and see F. at Dublin (Phomix Pack and Hazelhatch) on the 2th. The general precipitation of the British Isles and the constituent countries expressed as a percentage of the constituent countries. a percentage of the normal was: British Isles 116, England and Wales 126, Scotland 118, Ireland 124 A notable feature of the month was the frequency with which precipitation took the form of snow, sleet or hail. Practically every district had some snow, and owing to stormy conditions there was much drifting at times, and in the north many roads were blocked. Hail also occurred frequently in the north and west. Thunderstorms were reported from various districts on one or two days. Sunshine totals were generally below normal, but a slight excess was recorded in the Orkneys and Hebrides, on the east coast of Scotland, the south coast of England, and the south-east coast of Ireland. Fog occurred locally in various parts of England on the 5th, 7th, 9th and from of Ireland. the s4th to s6th Aurora was observed in Scotland on 4 occasions, that on the r3th being observed as far south as West Linton. At Compton (near Wolverhampton) an upper arc of contact of the 46° halo with brilliant coloration at approximately so is a.m. on the ath. The arc was reported to be nearly a complete circle.

March was on the whole cold, and, except in

Ireland and the south-west of England, dry and sunny. Noteworthy features of the month were the spell of wintry weather between the 6th and zoth, and the unusually mild weather round about the soth. The month opened with strong northerly wind, and in parts of the north and west it attained gale force, while snow accom-panied it in Scotland on the snd. Heavy rain fell in the south-west on the 3rd. Easterly winds on the 4th were associated with a trough of low pressure over the southern half of the the 4th the southern districts has bright sunny sential lates, and some heavy rain fell in the weather. This improvement was only temporary, south-west during the night of the 4th to 5th however, and coel unsettled conditions prevailed

and on the 5th. Cold weather and wintry pre-cipitation were general during the next few days. On the 5th and zeth heavy mow fell in Wales and the Midlands and north of England, some roads remaining impassable until the rath or rath. On the 9th London had its heaviest snowfall of the winter, when from 3 to 4 inches fell. The day was unusually cold in the southeast, followed at night by very severe frost. At Kew Observatory the maximum temperature of 32° F. was the lowest on record for March, while on the grass the temperature fell to 4° F. After the 10th there was an appreciable rise in temperature, but at Kew it was not until the 14th that temperature exceeded the normal for the first time during the month. By the reth mild weather had become general, and prevailed up to the zest. Some good sunshine records were obtained during this period. From the zerd to the zeth mainly dry weather, with fairly. warm days but cold nights, and much sunshine, was general. By the 30th most of Great Britain experienced a return of the cold weather. The extreme south-west, however, had unsettled weather with much rain at times from the arth to the end of the mouth. With the exception of a few exposed places the month was on the whole quiet, with a prevalence of south-easterly to northeasterly winds. Among the highest gusts re-corded were 72 m.p.h. at Pendennis on the 6th and 70 m.p.h. at Lerwick on the 1st. In most parts of the country it was the coldest March since 1984, and with the exception of the extreme south-west of England and west and south-west of Ireland, mouthly mean temperature was below the normal. The extreme temperatures of the month were (England and Wales) 65° E. at Cardington and Camden Square on the soth, at Cartington and Cameen Square on the soth, and 5° F. at Rickmansworth on the roth; (Scotland) 65° F. at Ruthwell on the soth, and r° F. at Braemar on the 3rd; (Ireland) 60° F. at Rathfarnham on the zyth, and r8° F. at Hazlehatch on the roth. The rainfall of the mouth was decidedly below the normal, the percentage raince being reported and Wales 65 Scotland. values being: England and Wales 36; Scotland 4a, Ireland 101, and British Isles 5x. At Meltham it was the driest March for more than 50 years, was most pronounced in the Midlands, where many places had less than no per cent. of the normal. In Scotland over large areas it was probably the driest March on record; at Glan-quoich since at least 1876 there has been only one drier March (1984). In Ireland there was an excess in the east and south, while at Cork it was actually the wettest March in 48 years. With the exception of the extreme south-west of England and most parts of Ireland, sunshine was above the normal. At Copdock it was the sunniest March since 1907. Fog was rather pre-valent during the month. Aurora was observed in Scotland on 6 nights.

April was on the whole unsettled and duli, with a pronounced excess of precipitation in England and Wales and in the eastern districts of Scotland and Ireland. Heavy rain, with local flooding, occurred in parts of Ireland and southwest England on the 1st and in Scotland on the and. Persistent rain occurred in south-east England on the and and 3rd, but in Sectiond and Ireland it was fine and sunny on the 3rd. On the 4th the southern districts had bright sunny

until about the 7th. In the south-east the eth and 6th (Easter) were dull and wet. On the 7th there was a change to warm, fine weather. The there was a change to warm, fine weather. The rath and rath were amongst the sunniest days of the month. On the agit there was a decided drop in temperature, and from the 1gth to 1gth, with the passage of a low pressure system across with the passage of a low-pressure system across the country, cold inclement weather prevailed. Snow, sleet or hall occurred at most places on the xytin, x8th and xeth, and thunderstorms were experienced locally in the eastern half of England on xytin, x8th and sand and at Durham on the x4th. Sunny conditions prevailed in Ireland and west Scotland during the period x8th to soth. From then until the end of the 18th to soth. From then until the end of the month the weather became slightly milder but month the weather necame signity minder out continued unsettled, with some bright periods. Heavy rain occurred in England and Wales during the period agrd to acth. Many good sunshine records were obtained between the acth and goth. With the exception of the extreme south-west of Ireland, monthly pressure means were below the normal. There was a considerable prevalence of north-westerly to northerly winds, and gales were recorded at several exposed places. Among the highest gusts were 74 m.p h. at Sealand on the 17th, at Erwick on the 4th, and 65 m.p.h. at Pendeunis on the 19th and Butt of Lewis on the 4th. Mean temperatures for the month were within ro F. of the normal in most districts within r F. of the normal in most districts. The extreme temperatures for the month were (England and Wales) 69° F. at Attenborough, Sparkhill and Sealand on the rath, and 44° F at Castleton on the 6th; (Sootland) 66° F. at Liberton on the roth, and 50° F. at Eskdalemuir on the 6th; (Ireland) 68° F. at Kilkenny on the roth, and 35° F at Mankree (astle on the 30th. In contrast to the dryness of March, rainfall totals for April were represented by above the normal many contrasts. for April were appreciably above the normal in most parts of the British Isles, the excess being most pronounced in the Midlands and the east most pronounced in the initialization of Lingland. Expressed as a percentage of the normal the values were: England and Wales 173. Sociland 106, 11eland 121, and the British Isles 143. Over England and Wales as a whole it was the wettest April since 1920. At Reignte Alarmeters, these the until the vertex of the street of the vertex of the street of the vertex of the street of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of the vertex of t the wettest April since 1920. At Reigate (Alvington) three times the normal fell, Westminsterhad 274 percent, and Richmond (Surrey), where it was the wettest April since 1871, 329 per cent. In westen Scotland manfull was generally well below the normal, while in northern and eastern Scotland there was an excess. Although below normal in the west, there were several agas with only two reinless. there were several areas with only two rairless days. Over the south and south-east of Ireland there was a deficiency, but elsewhere it was in cases a denoted by the last was in several to the normal. Monthly aggregates of sunshme were decidedly below the normal. At many places in England the average loss exceeded a hours per day. So little simishing has been recorded at Totland Bay only three in the sunshme. 30 years. At Thee there was a total of 38 hours for the three days 18th to soth, and over 39 hours for the three days soth to soth. Fog cocurred most frequently during the period 8th to zeth. Aurora was observed in Scotland on & nights. On the 18th a solar halo of 22°, with mock sun ring and upper and lower arcs of contact, was observed at Hastings.

May.—The weather of the month was unsettled, wet and cloudy. The month opened in most parts with considerable fine periods, but on the 3rd there were cold north-easterly winds over most of England, and heavy rain in the south-

25.27, athough the north-west and Scotland continued to have sunny weather. During the period 5th to 5th it was generally origint, warms and sunsy From then until the 20th unsettled conditions prevailed, with rain at times. soth and sust were cold and sunny, 'at then temperature rose generally and continued warm until the end of the month. Rain occurred in most places on the Saturday and Sunday of the Whitsun holidays (and and atth), but on Whit Mouday there was brillant sunshine in most places. After this conditions continued unsettled, with local thunderstorms from the settle. to zeth. Severe thunderstorms, accompanied locally by toriential rain, occurred in the southwest on the 27th. Monthly mean pressures were everywhere below normal. The prevailing winds were routherly and often strong in coastal districts. Gales occurred on the 12th and 12th and sell to 3oth Among the highest gusts recorded were 65 m.p.h. at Dunfanaghy, 63 m.p.h. at Tree on the rath and 63 m.p.h. at Lerwick on the seth. Mean temperatures were about normal or slightly above, mainly as a result of mid-nightly states. mild nights rather than warm days. warmest days were between the asth and acth. while the coldest spells were from the rat to sth and 17th to 21st. The extreme temperatures of the month were (England and Wales) 28 F. at London (Camden Square) on the 27th, and 22 F. at Castleton (Volks) on the zest; (Scotland) 75° F. at Ruthwell on the zeth, and ze° F. at West Linton on the zeth, and ze° F. at Dublin (Rathfarnham) on the zeth, and ze° F. at Dublin (Phonix Park) and at Newtownforbes on the 3rd. The month was decidedly wat, the we test May generally since 1925. Both monthly totals and the number of days of precipitation were in excess of the normal in almost all districts, the only important exceptions occur-ing locally in the north-west of England and in the north-west and south-west of Scotland. The general precipitation expressed as a percentage of the normal for the period, 282-2915 was . England and Wales 150, Scotland 255, Ireland r6s, and British Isles rgr. Unusually heavy ram accompanied the thunderstorm of heavy rain accompanies are brunders. Orm or the syth, among the largest fails being ros inn. at Cardiff (or nun. fell in 3½ hours) 83 mm. at Crickhowell, yp nun. at Watchet ys mm. at Newport, and 44 mm. at Shankin in the Isle of Wight. Much flooding occurred as the result, and considerable damage was done by the hall. In most parts sunshme totals for the month were below normal, the most notable exception being round about the Firth of Forth, where an appreciable excess of sunshine was recorded. Fog, which was often dense in coastal area, was recorded on several days.

June —The weather during June was distinguished by a pronounced excess of precipitation everywhere, with the exception of the southeast of England, and by a general deficiency of simishine. The first thire weeks were unsettled, dull and wet, with severe thunderstorins on the 5th, ath and 19th, followed by generally fine wenther during the last week. Notable incidents in the month's weather were the tornado which visited Binningham on the 14th and the widespread, severe thunderstorins and floods on that day. In most places the 14th was among the warmest days of the month, maximum temperature in London and the south-east exceeding 5c° F. In the Rickmansworth and Chorley Wood district of Heitfordshire the thunderstorm of

the 19th was accompanied by hall of unusual intensity. Mean pressure of the month was slightly above normal in the south, but from millibar to millibars below normal in the north and west. In most districts prevailing winds were south-westerly and generally light or moderate in force. The tornado which occurred in the Birmingham district on the 14th commenced about x4.40 G.M.T. and travelled rapidly from the south to the north-east, causing rapidly from the sound to the norm-name, causing a very great amount of material damage along its path, which varied in width from Soc to see yards. The storm ceased about rg.rg C.M.T. Monthly mean temperatures were below the normal in Scotland and north of England, but elsewhere were above the normal. The extreme temperatures of the month were (England and wales \$\text{82} \times \text{\$\text{\$K\$}}\$ at Bellingham on the \$\text{\$\text{\$\text{\$\grace}\$}\$ th and \$\text{\$\text{\$\grace}\$}\$ et Bellingham on the \$\text{\$\text{\$\grace}\$}\$ th; (Scotland) \$\text{\$\grace}\$ of the \$\text{\$\text{\$\grace}\$}\$ th and \$\text{\$\text{\$\grace}\$}\$ et Bellingham on the \$\text{\$\grace}\$ th and \$\text{\$\text{\$\grace}\$}\$ et Bellingham on the \$\text{\$\grace}\$ th, and \$\text{\$\grace}\$ et \text{\$\grace}\$ and \$\text{\$\grace}\$ et \text{\$\grace}\$ and \$\text{\$\grace}\$ et \text{\$\grace}\$  \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ et \text{\$\grace}\$ the seth; (Ireland) 7x°F, at Kilkenny on the syth, and 4x°F, at Hillsborough on the 6th, Markree Castle on the x3th, and at Mountmellick and Newtownforbes on the agth. Rainfall was much in excess of the normal in most places, and expressed as a percentage of the average for the period 1881-1915 the values were: England and Wales 148, Scotland 193, Ireland 174, and the British Isles 165. The most pronounced deficiency occurred around the mouth of the Thames, and locally in Kent and Essex; Margate recorded only sy per cent. Dungeness 37 per cent. Shoe-buryness 56 per cent. On the other hand, Southport, where the month, with one exception (June 1907), was the wettest June in 67 years' records, had sys per cent. of the normal. Much flooding occurred during the month as the result of torrential rain accompanied by thunderstorms. At Braunton 59 mm. was measured at 9 h. G.M.T. on the 5th, most of which had fallen since 7 h. At Eskdalemuir on the 14th, 31 mm. since 7 h. At Eskdalemuir on the x4th, 3x mm. fell during the hour 18 h. to 19 h.; the rainfall was reported to have been of an intensity unparalleled in living memory. Severe floods followed, involving the death of a farmer by drowning and the loss of numerous sheep and cattle. Sunshine aggregates were again below the normal. The daily deficiency at Eskdale and Harrogate was 14 hours, and at Dumfries and Douglas 13 hours. Some outstanding daily records were obtained, among them being 164 hours at Aberdeen, and 16 hours at Kirkwall, 1673 hours at Aberdeen, and 16 hours at Gordon Castle and Lerwick on the 18th. Fog was prevalent during the first half of the month and in the south-west of England on the 18th.

in the South-west of England on the asid-agid.

July, like June, was wet and dull, with widespread thunderstorms. The belt of high pressure which covered the British Isles at the end
of June gave way on July at before a depression
advancing from the Atlantic. From then until
the end of the month a series of disturbances
followed one another in rapid succession. The
fair intervals were of short duration, no districbeing free from rain for more than a day or
two at a time. Monthly pressure means were
decidedly helow normal as a result of the general
cyclonic character of the weather. At Southport the mean pressure was the lowest for July
since z88. Winds were mainly south-west to
west, light to moderate in force. Among the
highest gusts were 65 m.p.h. at Bynru Head on
the agth, and 6s m.p.h. at Liverpool (Bidston)

on the s8th. At most stations mean temperature was round about normal. This was due rather more to mild nights than warm days. Ground frost occurred at Biggin Hill on the 1st, and at Leafield and Hampstead on the sist. The extreme temperatures for the month were (England and Wales) 80° F. at Shoeburyness on (England and Wales) 30° K. at Shoeburyness on the sath, and 38° K. at Rickmansworth on the 7th and sist, and at Cantref (Breconshire) on the 9th; (Scotland) 70° F. at Perth and Stirling on the 9th, and 30° K. at Balmoral on the sist; (Ireland) 74° K. at Rathfarnham (Dublin) on the x3th, and 40° F. at Killarney on the 9th. The total rainfall for the month exceeded the normal for the fourth consecutive month, the percentage values for the constituent countries and tage values for the constituent countries and the British Isles being: England and Wales 153. Scotland 136, Ireland 121, British Isles 142. In spite of this general excess, an area including part of north-east Ireland, Anglesea, south-west Scotland and the Isle of Man experienced less than the average. At Rhyl and Llandudnot the fall was only about half of the normal. The unusual character of the month is shown by the following facts: at Redruth it was the wettest July since 1888, at Newquay by far the wettest July for 39 years, at Strelley only July 1888 and 1915 had more rain, and only three Julys less sunshine, and at Swyncombe House near Henleysunshine, and at Swyncombe House near Heniey-on-Thames the month's total of 6-sa inches was equal to more than 50 per cent. of the fall for the previous six months. Among the heaviest daily falls were 53 mm. at Hawkshead on the 3rd, and Crossdovey (co. Cavan) on the 13th, 52 mm. at Nettlebed (Oxon) on the 14th, and 52 mm. at Oving House (Bucks) on the 7th. Many falls of hall were reported, and flooding due to the torrential rain caused much disdue to the torrential rain caused much dis-location of traffic. Thunderstorms were relocation of traffic. Thunderstorms were re-ported on no fewer than 19 days during the month, and this accounted for a large propor-tion of the total rainfall at most stations. Sunshine was very much below normal in all districts, the deficiency approaching 50 per cent. In places. The brightest days generally were the 1st, 3rd, 7th, 5th, 1sth and 3srd, on each of which at least twelve hours of sunshine were recorded over a wide area. Coastal fog occurred occasionally during the mouth, mainly on the northern and south-western coasts. Aurora was observed at Gordon Castle on the 3rd.

observed at Gordon Castle on the 3rd.

August was wet, cool and dull in England and Wales, and sunny and dry in west and north Scotland and outlying islands. In England a spell of thundery weather was experienced from the 3rd to 5th, the storms being accompanied, especially in the south, by heavy local rain and flooding; on the 5th 74 mm. fell at Petersfield in an hour, and in the evening about as mm. fell on the roof of the Air Ministry in half an hour. Meanwhile in the west and north fair sunny weather prevailed. Subsequently, cool northerly winds with cloudy weather and occasional rain prevailed, except in the extreme west, where conditions on the whole were fairer. Heavy rain fell in eastern England on the 5th. Cool northwesterly winds prevailed during the next few days. About the 13th conditions changed, and became very unsettled, with frequent thunderstorms and almost daily rain until the 1st. Little or no rain fell after the 2smd. On the 24th a deep depression caused severe gales in the English Channel, the wind in a gust reaching a speed of 79 m.p.h. at Pendennis. By the 5th anticyclonic conditions became established over

927

most of the country and excellent sunshine records were obtained in several parts during the last few days of the month. The mean pressure of the month was very uneven, for while in the Shetlands it was so millibars above normal, there was a deficiency of 3 millibars in the extreme south of England. Winds were mainly northerly to easterly, and in general mainly light to moderate, but in the English Channel there was a prevalence of strong winds and gales. With very few exceptions, mean temperatures were below the normal. The only really warm days occurred from the 3rd to 5th. The extreme temperatures of the month were (England and Wales) 8:° F. at Hartest on the 5th, and 32° F. at Rhayader and Rickmansworth on the 5th and Newton Rigg on the 31st; (Scotland) 81° F. at Onich and Ardtornish on the 4th and at Glenbranter on the 5th, and aro F. at Dalwhinnie on the ath and at Braemar on the 30th; (Ireland) 79° F. on the 4th and 33° F. on the 25th at Markree Castle. The month was the fifth consecutive month in which the general precipitation exceeded the normal, and completed one of the wettest summers in England and Wales since comparable records began. At Greenwich Observatory the month's fall of Greenwich Observatory the month's fall of 150 mm. was \$84 per cent. of the normal, while in the Shetlands less than 10 per cent. of the normal was recorded. Among the largest daily falls were 15g mm. at Black Sluice and 12g mm. at Grand Sluice, Boston, Lincolnshire, on the 8th, 8s mm. at Jersey on the 25th, and 77 mm. at Mallsworth (Glos) on the 4th. August was a month of scanty sunshine except notably in the tweet of Scotland and the extreme poth of west of Scotland and the extreme north of Ireland. Much fog occurred during the early days of the month and from the s6th to s8th. Aurora was reported from Skye on the 7th, and a funnel cloud was seen at Newquay in the early afternoon of the sand.

The weather of September was rather cold and dull. Apart from warm days at the beginning and about the middle of the month, the days were generally rather cold. During the first four days of the month there was abnormally heavy rain, but afterwards it was mainly dry but dull. On the sat day temperatures of about 70° F. were recorded at several places, and thunderstorms were widespread on the and and 3rd, and local on the 4th, 5th and 7th. From the 6th there was a period of cool and mainly depression south of Ireland moved south-east, and rain occurred locally on the zith ard zith. By the 15th an anticyclone covered the British Isles, and temperature again rose to round about 70° F. at many places on the 15th, 16th

and 18th. Winds became northerly, and a change to cooler conditions occurred about the 18th. Slight rain occurred in Eastern England on the 22nd and 23rd. As the anticyclone recess destwards the weather became increasingly overcast, and rain set in in the west on the 23th and spread to other districts on the 35th, with warmer conditions in the 30th, with warmer conditions in the 30th.

Monthly mean pressure was above normal in all districts, while winds were mainly north-westerly to north-easterly, light to moderate in force. Gales were recorded in exposed places, and on the 4th gusts of 6 m.p.h. at Scilly and 56 m.p.h. at South Shields were recorded.

Mean temperature for the month was generally below normal. In the east and south-east of England the deficit ranged from 3° F. to 4° F. At Hampstead (London) the mean temperature, At Hampstean (London) the mean temperature, say's F., was the lowest for September since 1913. Ground frost was widespread during the period 5th to 13th, and in Scotland between the asth and 33td. The extreme temperatures of the month were: (England and Wales) 73° F. at Huddersfield and Attenbrough on the 185 and 29° F. at Rickmansworth on the 7th and 8th, at Rhayader on the 8th, at Castleton on the zoth, Rhayader on the sth, at Castleton on the roth, at Houghall on the rith, at Appleby on the rith and righ, and at Bellingham on the right and 40 K. at Kibkoniur on the right and 40 K. at Kibkoniur on the right, at Cork on the rit, at Kilkeniur on the right, at Bathfornham on the st and rith and and at Rathfarnham on the 1st and 17th, and 30° F. at Markree Castle on the 11th. The outtanding feature of the month's rainfall was the heavy falls of the first four days, which caused severe and widespread floods. Among the heariest falls were 4s mm. at Cantref (Brecknock) on the 1st, 40 mm. at Burnley on the 2nd, 89 mm at Newcastle (Wicklow), 81 mm. at Rathfarnham on the 3rd, and 127 mm. and 126 mm. at Castleton and Kildale (Yorks) respectively on the 4th. In Scotland, rainfall was generally much below normal, and at Deerners, Achnasheliach and Glenquoich it was the driest September since 1894. While most of Ireland had less than the normal, Dublin had two and a half times the normal.

Sunshme totals were everywhere below the normal, the loss being most pronounced in the Midlands and north of England and in the low-lands of Scotland, where the mean daily duration of sunshine was in several places less than 2½ hours At Southport it was the dullest September since before 1896.

Aurora was observed in Scetland on five occasions, that on the aist being observed as far south as Leuchars.

# STORMS AND FLOODS IN 1930-31.

October 9.—A dyke on the left bank of the river Néthe, near Lierre, gave way, leaving a gap 45 feet wide, and 25 acres of ground and houses were flooded. 24. As the result of heavy rains, serious floods occurred in various parts of France. In the valley of the Meuse the water was in some places up to the level of 1910. A terrific wind, lasting only a few minutes, occurred near Grenoble. Many cottages were unroofed and nearly 6,000 broken walnut trees lay on the ground. 25. Floods at Smyrna, following heavy rains, caused the death of 40 persons and about 100 houses collapsed. A heavy north-westerly gale in the Gulf of Lyons delayed and damaged shipping. At Montpellier heavy rain and floods

caused a row of houses to collapse. 28. Government House, Madras, was struck by lightning, and considerable damage done. 30 Further heavy rain in Smyrna Laused 2,500 families to be rendered homeless by floods.

November 4.—A xoo-mile-an-hour gale caused much delay to shipping in the Atlantic. zo. A cyclone struck the island of Kvaukpyu, near Akyah, wiping out the town and its suburba. zo. Many persons were killed and injured at Bethany, Oklahoma, when the town was struck by a tornado. zx. An express train was derailed between Oudon and Clermont-sur-Loire, due to a subsidence of the track caused by heavy rain and flooding of the Loire. zz. A violent storm

accompanied by terrential main raged over neathern, central and western France. Many low-lying stretches of country were mooded. Persistent rain caused many rivers in Belgium to overflow, and at some places near Mons the fields were g feet under water. 23. Many people were injured as the result of a severe storm which swept Vienna. Heavy rain over the greater part of France extended the floods which had already occurred. At Le Mans the Sarthe reached the highest level since 1882. Much damage was done in Germany by a storm. The gale reached hunricane force. A hurricane of short duration and small radius passed over the Fiji Group, and much damage was caused on the island of Owalau.

Becomber 26 .- During a severe snowstorm the scheoner Warren M. Only was lost at Burnt Point, Newloundland. Four of the crew were logt. 29. A violent hurricane, with heavy rain, broke over Algiers and raged for three days. Much loss of life, and damage to property oc-curred. At Blida s inches of rain fell in s4

January 7.—Exceptionally heavy rain in Pretoria caused damage estimated at £70,000 to the roads and sidewalks. 72 Snow fell in Algiers for the first time for seven years. More than 30 persons were injured in a railway collision, at Readville, during a heavy snowstorm. 32. The Russian steamer Zanacha. foundered in the Black Sea during a violent storm. The crew of 26 as well as the 14 passen-

gers were drowned.

Rebrusry g — Unusually heavy rains in the south-eastern districts of Queensland caused serious floods. Large areas of Brisbane were under water. The Brisbane River reached its highest level for 30 years. Fourteen inches of main fell in at hours on the I weed River, seriously flooding the important towns of Lismore and Manwillumbah. 7. During a sudden and heavy snowstorm in New York, a ferry carrying soo passengers was rammed by the steamer Marion while crossing the Hudson. 13. Much flooding occurred at Valcov on the Danuhe. Out of 1800 houses only about 100 remained unflooded, and many collapsed. az. Much damage was done to shipping by a gale in the Mediterranean. storm of great violence bloke over Sicily and Southern Italy. Torrential rain caused much Southern Italy. Torrential rain caused much flooding. Severe snowstowns and the subsequent drifts cut off several of the Alphie regions. s6. Eighty people were killed by a hurricane in the Ba-district of Fiji, and ree in Singatoka. At the hill station of Nadarivatu & inches of rain fell during the week; the Ha River rose 40 feet. About 20 percent of the succession was damaged. sugar crop was damaged.

March 4.—Storm and exceptional tides did much damage slong the Atlantic Coast. In New England the damage was estimated at \$3,000,000. 8. The Seine, which had been steadily rising for seme days, overflowed its banks in the suburbs of Viry-Chatillon and Villeneuve-Saint-Georges. The level of the river at the Pout d'Austerlitz was about 27 feet above the normal. Heavy gales and torrential rain swept New York and New Jersey. Seven people were killed and many injured. ag. A severe storm as miles west of Algiers unroofed houses and approated many trees.

April 21.—During a storm off the south-west coast of Korea, 225 fishermen were drowned. 20. Thirteen inches of rain fell in the previous 48 hours near Hong Kong. The railway line at Taipo was undermined and as persons were killed in a railway accident. as. Vilna was seriously flooded owing to the River Villa rising ry feet above normal.

May 7.—Heavy rains and an unusually rapid

thaw caused much flooding in Sweden. Torrential rains flooded large areas in South Germany. 27. Thunderstorms damaged vineyards and fruit

trees in the Rhine valley.

June 21.—A tornado which struck North Adelaide did many thousands of pounds worth of damage. The roofs of over 200 houses were torn off and some houses were wrecked. Buring a thunderstorm over the western end of Jamaica, six persons were killed and twentyone injured by lightning. za. During a suddenstorm the French steamer Scient-Philipet capsized about five miles off Saint-Nazaire; between 300 and sofpersons were drowned.

79. Three persons were killed, more than so injured, and about 730 houses damaged, when a hurricane of the whirlwind type awept up the valley of the Else, in Westphalic.

July 6 .- Four persons were killed in a violent or joint bersons were ance in a vicense cyclone at Sydney. The wind reached a velocity of 70 miles an hour and 5 inches of rain fell in 18 hours. 8. After a long drought there were heavy rainstorms over Denmark. The hay crops were apoiled andmany bridges were carried sway.

as. During a gale which did great damage to the town of Lublin (Poland) three people were killed

and about as injured.

August z.- A typhoon, with the record wind August 1.—A symmon, while the velocity of 35 m.p.h., struck Hong-Kong, doing much miner chanage. 4. Severe floods in China, reaching in parts to a depth of 25 ft., rendered about \$6,000,000 people destitute. The floods are likely to last for several months. A thunder-storm of exceptional violence caused ra deaths and great material damage in Northern France. 6. A cloudburst caused extensive damage in the Valle Aurina to the south-east of Brenner Pass. A violent storm which swept the coast in the neighbourhood of Toulon caused great damage and the loss of a number of lives. zz. Thousands of persons were rendered destitute and many drowned as the result of floods caused by the mouscon in the Malvan district of Bombay. 25. Floods on the River Murray caused many thousands of pounds worth of damage to settlements and townships in South Australia. The floods reached a depth of rx feet A violent rainstorm drenched Gothenburg, and the Sahlgren Hospital was completely flooded. The damage amounted to about £5,500. 25. Torrential rain caused the River Lys to overflow and much flooding occurred in Eastern Flanders. Many small farmers lost their harvest.

September z.- A typhoon which struck Hong-Kong did great damage to fishing fleets. About soo Chinese were drowned. S. Several miles of the Cauadian Pacific main railway line were swent away by the flooding of the Columbia river in the Bockies. zo. More than 800 people perished in a hurricane which struck Belize. Hardly a house escaped damage, and the progress of the storm reached as far as 50 miles inland. 14. Four persons were killed when a severe atorm swept over Timisoara, Rumania. x6. A hurricane struck the city of Vera Cruz and wrecked a number of ships in the harbour, and some damage was done to property. 36. A typhoon in Japan caused the heaviest rainfall recorded in Tokyo for 17 years. Landships damaged many houses in adjuning

districts and a6 people were killed.

BRITISH ASSOCIATION.—The British Associa- confined to more southerly regions, is repre-tion for the Advancement of Science held its sented by an examples. Many angules still exist. Sept. 30. General the Rt Hou. J. C. Smuts, who succeeded Prof. F. O. Bower as President, delivered an address in which he described the trend of modern science as leading towards a less materialistic and more "organic" conception of the universe. The world, he said, consists not only of electrons and radiations, but also of souls and aspirations. Beauty and holmess are as much aspects of Nature as energy and entropy, and an adequate world-view would find them all in their proper context in the framework of the whole. Evolution was, perhaps, the only way of approach to the framing of a consistent worldpicture which would do justice to the immensity, the profundity, and the unutterable mystery of the universe

The Presidents of the various sections, and the subjects of their addresses, were as follows:—

A, Mathematics and Physics, Sir J. J. Thomson,

"The Growth in Opportunities for Education A, anthematics and Physics, Sir J. J. Thomson, "The Growth in Opportunities for Education and Research in Physics during the Past Fifty Years"; B, Chemistry, Sir Harold Hartley, "Michael Famaday and the Theory of Electrolytic Conduction"; C, Geology, Prof. J. W. Gregory, "Geological Problems Contemporary with the British Association"; D, Zoology, Prof. E. B. Poulton, "A Hundred Years of Evolution"; E, Geography, Sir Halford Mackinder, "The Human Habitat"; F Keonomics, Prof. E. Camian, "The Changed Outlook in Regard to Population"; G, Engineering, Sir J. Alfred Ewing, "Power"; H, Anthropology, Prof. A. R. Radeliffe-Brown, "Present Position of Anthropological Studies", J. Physiology, Dr. H. H. Dale, "The Biological Nature of the Viruses"; J. Psychology, Dr. C. S. Myers, "On the Nature of Mind"; K, Botany, Prof. T. G. Hill, "The Advancement of Botany"; L. Education, Sir C. Grant Robertson, "Educational Development, 1831-1931"; M, Agriculture, Sir John Russell, "The Changing Outlook in Agriculture." culture.

The meeting in 1932 will be held at York, under the Presidency of Sir Alfred Ewing.

BEES COUNTED BY RADIO -The New York Department of Agriculture, Industry and Commerce has worked out a method of counting bees by radio. A microphone is placed in the entrance of the hive, and as the bees crawl home, their feet scrape over the microphone, generating a current which is amplified, causing the operation of a counting device. Thus it is possible to take an effective census of the population of the hive.

BIRD SKELETONS FROM LA BREA PITS .-- Dr Hildegarde Howard has completed a census of bird skeletons in the La Brea asphalt pits near bird skeletons in the La irea aspinal pits near Los Angeles, which in the past have gained world-wide fame on account of the existing number of sabre-toothed tigers and other mammals found embedded in them. Of more than 4, 200 birds recovered, 69 per cent. are predatory species; and of these, durnal birds of prey far exceed nocturnal forms—evidence, similar to that yielded by the mammals, that most of the creatures caught in the glaur were no presented of other individuals. in pursuit of others in difficulties. Some extinct forms are in large numbers: 500 individuals of

sented by ago examples. Many species still existing in California occur profusely—the American golden eagle with more than 880 individuals, the California condor 190, the bald eagle 150, the red-tailed hawk 113, great horned owl 104. Ducks and geese are fewer, in all less than soo.

BLACK-NECKED GREBE.—The disappearance of the black-necked grebe as a British breeding bird followed the drainage of the fen area, but its reappearance in recent years shows that it has considerable powers of adaptability. In 2004 it was first discovered to be breeding in Wales, in xors in a western lough in Ireland, in tages at Tring Reservoirs, and in 1930 in a loch in the Forth area of Scotland. Now Mr C. V. Stoney and Mr. G. R. Himphreys have found in western Ireland a colony which they estimate to consist of about two hundred and fifty pairs, in a lough not more than two or three miles long and half a mile wide. It has been assumed that the colonists in the British Isles were immigrants from the Continent, where the species heeds in Denmark, Germany, and Livonia. But the presence of the Irish colony makes it possible that the new breeding places may have been peopled from the west rather than from the east.

BLUE GOOSE,-After several years search in Baffin Island for the breeding ground of the blue goose, Mr. J. Dewey Soper has tracked the bird to its home on the Foxe Basin coast, near to the Arctic Circle The blue goose was one of the few North American binds known only as a migrant. Its wintering grounds were on the coast of Louisiana, and before the breeding season it vanished northward. Mr. Soper began his explorations in 1923, and year after year he continued them, and eventually learned from the natives that the birds were known to breed in large numbers on the tundra beside Foxe Basin He and two Eskimos pitched then summer camp on a tundra stream near foxe Basin in latitude 65° 35' north, and there he found the blue goose in thousands on the Blue Goose plain. His report, published by the Canadian Department of the Interior, gives a complete account of the breeding ground, migration, ne-ts, eggs, and general habits of the bird, which, though for long regarded as a colour phase of the snow goose, with which it associates, now ranks as a distinct species. Mr. Soper's travels in search of the blue goose amounted to 30,000 nules.

BUTTERFLIES' PLACE-MEMORY -- Mr F Morton Jones has made a number of experiments in the Royal Palm Shade Park in Florida to check the observations of Mr William Beabe that zebra butterfies possess memory, sociability and caution. Heliconia clarithonia is usually fairly abundant in the Park from mid-Jai.uary to April. Six roosting places were discovered, and about these, while daylight was failing, the butterflies collected in numbers, making preliminary explor-ing surveys, and finally settling down for the night. The marking of several individuals showed that for several nights in succession the same butterfly may return to a particular twig Was the homing due to place-memory or to scent? A simple experiment settled the question. Branches on which a number of Heliconias had 100sted the turkey, Parapavo, and more than a hundred of Teratornis, a vulture larger than any flying bird of the present day. The caracara, now observed that something was aniss, continued their exploring flights, and finally settled down on twigs in the old roosting bush. Some paused on the transferred twigs, only to leave them again and rejoin the flying group. After dark, 27 were found in new positious in the old bush, and only 1 on the transferred twigs, 10 feet away. Apparently place-memory is the guiding power.

CENTRAL HEATING FROM VOLCANO.—Professor Ponte, the director of the observatory on Mount Etna, has installed a system whereby steam from the volcano has been used to keep the building warm against the severity of winter. Pipes have been fixed deep into the steaming fissures near the principal crater and led into the observatory building, where the natural volcanic heat is regulated by a system of valve and stop-cock. As the strength of the furnace is somewhat out of proportion to the needs of the house, Professor Ponte has installed a system of overflow pipes, safety valves, and alarm whistles which come into operation when Etna begins to overdo the work of central heating.

CLOCK GOING FOR FOURTERN YRARS.—T. Dieden, of Carislund, Sweden, has invented a clock that apparently can go on continuously until any part wears out, and has already been running for fourteen years. According to a description in Engineering, in its main features it is similar to an ordinary clock, having a driving weight, a train of wheels driving the hands, and a torsion pendulum consisting of a heavy metal disc suspended by a thin steel ribbon. The power is obtained by the ordinary variations of the stmospheric pressure and temperature. The case of the clock contains seven closed elastic metallic boxes of the type used in an aneroid barometer. The lower box is attached to the case, but the column of boxes is otherwise free. The expansion or contraction of all the boxes due to changes in the temperature or pressure is communicated to the top box. When the column of boxes either increases or diminishes in height, the spindle carrying the ratchet wheels always rotates in the same direction and the driving weight is wound up. When the weight reaches its topmost position they are thrown out of action. The pendulum has a period of 7½ seconds, so that the length of the equivalent simple pendulum is about x8 feet.

COLOURED GLASS AND HOUSE FLIES.—Further experiments on the lines described in the 1931 WHITAKER have been made on the susceptibility of house files, wasps, and bees to coloured glass. Prof. J. W. Munro made a number of tests with the object of finding whether rooms glazed with "Calorex" are freer from insects than rooms glazed with ordinary glass. Calorex glass is of a pale greenish-blue tint, and is designed to afford protection from excessive colour radiation by strongly absorbing infra-red radiation while transmitting the radiation within the visible spectrum. He found that house flies, exposed to sunlight in a box, one half of which was glazed with Calorex and the other with ordinary glass, showed a marked preference for the ordinary glass, the ratio of the numbers of insects in the two halves, averaged over several experiments, being about 9:4. These results were verified by other tests in which the insects were not enclosed within the box but were

attracted to it by a suitable bait. Waspa and bees were found to behave in the same way as files. Much of the preference is ascribed to the inequality of temperatures beneath the two kinds of glass, the disparity in insect population being greatest when the maximum temperature differences were observed. That an effect can definitely be ascribed to the solour of the light which has passed through Calorex was demonstrated by an experiment in which bees were enclosed in a glass cylinder, one end of which was closed with Calorex and the other with ordinary glass. By interchanging the glasses an immediate reaction was obtained, the bees moving to the end covered with ordinary glass.

CRAB'S LONG CRAWL.—Professor Greuvil, of the Paris Zoo, who, in collaboration with scientists from Cambridge University, has been studying the movements of sea-fish and crustaceans between the Indian Ocean and the Mediterranean Sea, has revealed the fact that a crab has crawled through the Suez Canal from the Red Sea-roughly rox miles—in sp years, an average speed of about as inches an hour. The crab in question, Neptimus Pelanqines, is one of a number of his family specially marked so years ago in the Red Sea, and he arrived, still weaning his identity disc, at Port Said.

DAVID DUNLAP OBSERVATORY.—Mrs. D. A. Dunlap and her son, Mr. D. Moffat Dunlap, have decided to erect near Totonto an astronomical observatory, in memory of her husband, a keen student of astronomy. The outstanding feature of the David Dunlap Observatory, as it will be called, will be a large reflecting telescope 74 inches in diameter, made by Sir Howard Grubb. It will be housed in a circular metal building, in the midst of a large acreage which will be converted into a park, to be known as the David Dunlap Park. When the observatory is completed, it will be under the Department of Astronomy of the University of Toronto, while the park will be developed in a scientific way by the Faculty of Forestry.

DYING GLACIERS.—Experiments made on fifty glaciers of the Eastern Alps in Austria show that they, Hke the glaciers in Switzerland and the Canadian Rockies, are generally retreating. Only one, the Simonykees, in the Venediger group, showed any growth, the reason in this case being that the moraine debris surrounding it protects it from the effects of the sun. The growth was not more than 15 to 36 feet. On the other hand, in the Silvretta group, on the Vorarlberg-Swiss frontier, at the Bielthaler Ferner the glacier had shrunk 183 feet. At the top of the Fermunt Pass the carcass of a horse had come to the surface through the evaporation of the glacier top. Not for decades have horse-driven conveyances crossed this pass. The reduction of the glaciers has been very considerable in the Oetztal Alps in Tyrol; the Rosenkarferner shows a diminution since 1928 of 91 feet, and the Marzellferner 321 feet. The famous Pasterze Glacier, in the Glockner group, has lost in length from 3 feet to 15 feet. The depth of this glacier was found with the aid of seismic instruments to amount to 941 feet. It may be added that the great Nisqually Glacier on Mount Ranier, in Washington, has retreated x.oco feet in as years.

ELECTRIOITY FROM THE JORDAN.—Mr. H. J. Shepstone, in the Engineer, gives an account of the progress made with the scheme for supplying Palestine with electricity, generated in the valley of the River Jordan. In its passage from its source in Mount Hermon to the Dead Sea, the river has a fall of 3,000 feet, and it discharges more than 2,000,000 tons of fresh water into the Dead Sea daily. The scheme includes the provision of three hydro-electric plants, the first of which is situated at Jisir-el-Mujamch, seven miles south of the Sea of Galliee. For the storage and control of the water two dams and two concrete-lined canals have been constructed, and the first two units of 8,000 h.p. each have been installed in the power-house. Later on a second power-house will be built at Abadieh and a third at Jisir Banah Yakoub, which lie respectively south and north of the Sea of Galliee. Transmission lines will connect the hydro-electric plants with three fuel power-stations at Jaffa, Rafia, and Therias, and in the near future, it is hoped, every city, town, and agricultural settlement will be able to obtain electrical energy.

EMBALMED WHALES.—Mr. Percy Stammwitz, an official of the Natural History Museum, South Kensington, has been successful inemialming two whales, each 45 ft. long, and weighing as tons, in a Norwegian harbour, and bringing them to England. Immediately after capture the whales were towed as quickly as possible to the port of Aalesund, and thele he at once set to work on embalming them. The whales were cleaned, and then packed with salt. Afterwards more than 6c gallons of formalin (embalming fluid) were pumped into their veins in the usual way. For the two whales he used 6c tons of salt and 130 gallons of formalin. The task was carried out successfully, and now the whales look just like crystallised fruit. This is the first time that whales have been embalmed in Europe They were brought to England lying in salt in the hold of a ship, and each 24 hours they were injected with preserving fluid by means of a hypodel mic syringe. It was expected that the whales would last two years.

ESKIMO CHÁRACTERISTICS.—Dr. Aleš Hrdlička has reported to the Bureau of American Ethnology the results of a journey among the Eskimo, which he made in 1926 for the purpose of an anthropological survey of these people. His conclusion is that the Eskimo throughout their territory are one and the same people. The strain is fundamentally related to that (or those) of the American Indian. It is also undoubtedly related to they ellow-brown strains of Asia. The Eskimo are remarkably alike over their whole territory in such characters as pigmentation, build of body, physiognomy, large bram, fullness of forehead and largeness of face and lower jaw. They differ in stature, form of head, and breadth of nose. Between east and west there is a regular gradation, due to adaptation and differentiation. They suggest a moderate stream of people of fairly broad but with a mesorhine nose, and other characteristics in common, reaching America from northeasternmost Asia after the related Indian, spreading along the coast until blocked by the preceding Indian tribes, and gradually modifying physically in adaptation to environment.

The evidence shows that the more highly differentiated and divergent the Eskimo becomes, the greater the gap between him and his Indian neighbour. The facts point, therefore, to the original identity of the source from which the Indian, more particularly the latest branches, and to the skimo were derived, and to the identification of this source with the paleo-Asiatic, yellow-brown peoples of lower northern Asia.

FACSIMILE TRANSMISSION AT 180,000 WORDS AN Hour.—A new facsimile transmission system, which, it is claimed, will send r80,000 words from station to station in an hour, has been demonstrated at the International Telephone and Telegraph Laboratories at Hendon. Through a machine on which a number of lights played in and out, sheets of typescript were passed at the late of one every minute. The receiving machine was in semi-darkness, relieved only by the glow of shrouded red lights. A blue lamp flickered little points of yellow light glowed within a tube; and to, the other end of the machine a long roll of white paper came pouring out. This was taken to a dark 100m, and a minute or two later perfect facsimiles of the typescript were supplied. The system consisted of scanning the messages in a series of fine parallel lines with a point of intense light. reflections of light are led to a photo-electrical cell, which delivers signals corresponding in amplitude to the tone value of the picture element The signals as transmitted are received on photo-electric paper, which can be quickly developed The first machines to be put on the market will, it is claimed, transmit 120 pages of 1,500 words each an hour-a total of 180,000 words. In this way it will be possible to transmit a complete newspaper from London to Melbourne in an hour.

FISHES LIKE COMPANY—At the Plymouth Laboratory of the Marine Biological Association Mr. 6 M. Spooner has been trying to find out, by means of mirrors held in front of fishes, if they recognised their image and wanted to swim beside it. Sight is beheved to have an important influence on the desire of fish to swim in shoals and schools, and Mr. Spooner's fish-mirror tests tend to uphold this theory, By an ingenious trick, he made fish want to swim in hime with other fish which were not therefore swim in shoals. Describing the behaviour of a fish when swimming near a looking-glass, Mr. Spooner says the fish spends a good deal of time swimming to and fro across the nurror surface with its face close against the glass, as though attempting to pass through it. It passes up and down, often making fullis snaps at the surface and displaying other reactions characteristic of frustrated effort. Other tests show that fishes group more readily if disturbed or alarmed, and least when hunting for food. Little fishes will group with little ilbes.

FOAMING OF BEER.—Prof. Alexander Findlay has desoribed a number of experiments on the phenomena of the foaming of heer which were made by himself and his colleagues. While the stability of the foam, he says, will depend mainly on surface tension and viscosity, the size of "head" formed under the ordinary conditions

of pouring out a glass of beer will depend mainly on the rate of evolution of carbon dioxide from its supersaturated solution in the beer. This rate varies with the degree of supersaturation, which, in turn, depends on the nature of the beer and the method of its manufacture. A pale ale was found to evolve carbon dioxide more rapidly than a stout or export beer. The rate of evolution, moreover, depends greatly on rate of evolution, moreover, depends greatly on the walls of the containing vessel and their effectiveness in supplying gas "nuclei" to start the evolution of carbon dioxide. Traces of grease on the surface of the glass are very effective in promoting the escape of gas; and the difference in "head" obtained with a dry and wet glass is probably due to this fact. In the case of a wet glass, there will be an absence of air bubbles on the surface to act as nuclei.

FRUIT MADE TO "SWOON."-A remarkable new refrigerating agent, which is 60 deg. colder than the temperature of the North Pole, is being manufactured at Billingham-on-Tees by Imperial Chemical Industries, Ltd. Known as "Drikold," this material, which is a preparation of carbon dioxide in solid form, resembles in appearance blocks of compressed snow, but since it has a temperature of 144 deg. of frost, it has some four times the refrigerating power of ordinary ice. It is intended to be used for the production of carbon dioxide gas, or as a refrigerating agent, which should last any time up to three months. It is well suited for the transport of fresh fruit. Fruit breathes, and if subjected to a suitable quantity of the gas "swoons," or goes into a state of suspended animation, until it is again exposed to the air. The gas may also be used to replace the usual vacuum for packing materials such as cocoa or tobacco. As a refrigerating agent, its complete absence of moisture enables it to be used in the packing of parcels to be sent by rail or through the post.

GLIDING ACROSS THE CHANNEL .- On June 10 the English Channel was crossed for the first time by a British-built glider with a British pilot, Mr. Lissant Beardmore. The pilot, having been towed by an aeroplane to a height of the state of the above Lympne, at 4.30 p.m. released his machine and glided in a continuously falling path, landing at St. Inglevert aerodrome just after 6 p.m. He was not, however, officially recognised as being the first person to glide the Channel, since he was prevented from applying to the British Gliding Association for the proper observation of his performance by the anomaly that he did not hold the most advanced of the certificates awarded to glider pilots, and was therefore not judged competent to undertake the feat. Herr Kronfeld, on a German-built machine, accomplished the same flight under official observation, on June 20. He flew from France to England, and thus became the holder of the official distinction. He afterwards made a return glide from Dover to St. Inglevert.

GREENLAND IOE CAP.—Dr. Sorge and his companions on the German Greenland Expedicompanious of the German Greenand Expedi-tion have, by means of artificial earthquakes, tested the thickness of the ice cap which covers the interior of that country like a dome Twenty-five explosions were made, and the resulting waves observed. At the Central Station, equidistant see miles from Greenland's eastern and western coasts, and on the 720 of ing the researches begun as a study of the

latitude, they found, by reckoning the time taken for the return of the explosion wave taken for the return or the explosion wave reflected from the base of the ice-sheet, that the ice was 3,800 ft. thick at 9,840 ft. above sea level. Other members of the expedition working on the border of the inland ice, 38 miles from the coast, found the ice to be from a,300 ft. to 3,000 ft. thick at 5,900 ft. above sea [Janual and is therefore, as the late leader.] level. Greenland is therefore, as the late leader of the expedition, Professor Wegener, believed, an ice-filled bowl surrounded by mountains up to s,coo metres in height. The valley in between falls away to 300 metres, and over this great expanse of rocky ground curves the enormous ice cap, which rises from 100 metres at its outer extremities to 3,000 metres at the top of its arch. Here millions of cubic miles of ice cover the rocky surface. It was Professor Wegener's theory that the conformation of Greenland was caused by this enormous mass of ice, the weight of which had during the ages gradually depressed the interior of the island.

GYROSCOPIC CHECK TO SEA-SICKNESS. order to reduce rolling movements to a minimum, and to save passengers from sea-sickness, the new ocean liner, Conti di Savoia, which the Italian Lloyd Sabando is building for the Atlantic service, will be equipped with three gyroscopic stabilizers at a cost of £300,000. Each of the gyro-stabilizers weighs 100 tons and has a diameter of 13 ft. They will be placed in the lower hold of the ship under the bridge. the three big wheels, representing a total weight of 300 tons, are spinning in unison, the gyroscopic power they exert will be sufficient to counteract the motion of this 50,000-ton ship labouring in a heavy sea. The tendency of the ship to roll one way will be met by an opposing force, and the hull will thus be kept steady. It is estimated that the vessel will never roll more than 5 deg., no matter how boisterous the weather. Each wheel is driven by an electric motor of 560 h.p., but the full power will rarely if ever be required. The cost of running all three gyro wheels is estimated at not more than £xz a day.

GYROSCOPE IN WELL-BORING .- In the boring of oil wells many things lead to the deflection of the path of the drill from the vertical, and it is important that the mining engineer should be informed of such deflection. In conjunction with the Sun Oil Company the Sperry Gyroscope Company has now brought out the "Surwel" gyroscopic clinograph. The apparatus consists of a gyroscope with its axis set north and south, a box-level gauge, a chronometer and a film camera, these parts being contained in a stee cylinder 5½ in. in diameter, which can be lowered down the well. The bubble in the box-level shows the inclination; a pointer on the gyro-scope gives the direction of the inclination; while the camera, timed by the chronometer, takes a series of photographs of bubble, pointer, and chronometer hands. As the rate of lowering is known, the exact depth at which each camera observation is made can be found, and thus the inclination and its direction can be determined at any given depth. The data recorded on the film can also be plotted on squared paper and a graphic picture of the well's course through the ground can be obtained.

HAIR AND CRIME. - Dr. John Glaister, continu-

significance of human and other hair in the detection of crime, has made a comparative investigation of the hairs of a large number of mammals. The results appear in "A Study of Mairs and Wools," published by the Faculty of Medicine of the Egyptian University, where the author is professor of forensic medicine. Dr. Cliaster concludes that a critical examination of hair will always reveal the mammalian order or sul-order to which it belongs, in a very large number of instances will betray the family, and in many cases the species. If it be a human hair, in an appreciable number of cases it is distinctive of sex, in most cases it can be allocated to its site on the body, and in a very approximate manner may decide the age of the possessor, as very young, adolescent, adult, or aged, provided a number of hairs are available.

IRON ROAD.—The first cast-iron road in the world has been laid on a stretch of about zoo yards of Romiord Road, Stratford, E., one of the husiest thoroughfares in London. Triangular plates of iron were laid on butumen, which had been sprinkled on a concrete foundation. Mr. Frank Hough, the inventor of the new road, claims for the new surface less noise and vibration in all forms of traffic, an absence of skidding, and rapidity of renovation. It is rose a yard cheaper than the cheapest foreign grante, and it will last 50 years, after which 45 per cent. of the original value of the iron can be made out of the sale of the old road.

LARCH POLES FOR TELEGRAPH LINES—Experiments have been carried out at the Forces Products Research Laboratory at Princes Risborough in the treatment of home-grown larch poles to render them suitable for use in telegraph, telephone, and power transmission lines. The objections to larch for transmission lines are based on the behaviour of creosoted poles used during the War. It was found that the creosote did not penetrate the pole to any depth, and consequently after erection the poles were liable to crack or split severely. Experiments carried out with poles from the larch woods in Tintern Forest have shown that these difficulties can be overcome. By peeling and making a number of incisions in the poles with a broad kniffe, a satisfactory penetration of the preservative is obtainable. Although the incisions have a slight weakening effect on their strength, home-grown larch poles so treated are said to be 25-20 per cent. stronger than imported poles of Scots pine of the same dimensions.

MECHANICAL EYE FOR FLYING.—A mechanical eye for aeroplanes, which can find any arrway beason at a distance of two miles in an ordinary fog has been devised by engineers of the General Electric Company. The device involves the use of photo-electric cells. It is mounted in two parts on the tail of an aeroplane. As the aeroplane approaches a beacon the device indicates by one set of signals whether the beacon is to the right or the left of the seroplane, and by another whether the aeroplane is approaching or departing from it. The two sets of signals, together with altitude readings, make it possible for a pilot to calculate his landing exactly. The "eye" can be set so as to select the beacon desired from among hundreds of others merely by the rate of winking peculiar to that beacon.

MOON'S TEMPERATURE.—Messrs. Pettit and Nicholson, of the Mount Wilson Observatory, have made a series of experiments on the temperature of the Moon, using a delicate thermopile on the xoc-inch reflector. They found that the Moon's surface under a vertical Sun has a temperature of xox C., just above boiling water; at altitudes 60°, 30°, and 10° the temperatures are 88°, 40°, and —30° respectively were registered. During an eclipse of the Moon, a region that was at 60° C. before the eclipse began, fell to —xoo° when the region entered the umbra; and the return of heat after the eclipse was also rapid, suggesting that the Moon's surface is composed of loose volcanic ash and that the heat only penetrates a few maches below the surface. The temperature at night was found to fall below —x50° C. There is thus a range of 250° C between day and night in the equatornal regions of the Moon; which would tend to disintegrate rocks by alternate expansion and contraction.

Music of Electric Vibrations—The "new music of electric vibrations" was discussed in a paper read by Dr Goldsmith before the New York Electrical Society. He illustrated it by an electric carillon, which can send out bell tones louder than any bell in the world. A series of small steel chimes, something like those of a household clock, are struck by electric hammers actuated by a keyboard similar to that of a plano. The sounds thus produced are only andible a few inches away, but the vibrations of the steel chimes create small electric currents in devices like the "pick-up" used in electric gramophones. These feeble currents are amplifiers, and can be clearly heard in the largest concert hall or for miles round a church tower by means of giant amplifiers. The operator of the electric carillon not only controls the notes to be played, but also can vary the volume of the tone to any desired extent Dr. Goldsmith believes that the musical artist of the future will become more indispensable. The number of notes which the nustical can play persecond will not be limited by the speed of his fingers. Tones of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to trasemble those of any origin can be made to trasemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any origin can be made to resemble those of any

NEW PHOTO FLASH LAMP.—A fireless, smokeless, odourless and noiseless photographic flash lamp has been developed by the General Electric Corporation. Cleveland. Ohio. It consists of a clear builb of standard design, filled with oxygen, with the flashlight filament coated with a special preparation, and with a quantity of thin aluminium foil in crumpled sheet form within the bulb. When the circuit is closed, the filament is lighted, and this, in turn, lights the foil. The flash is confined entirely within the bulb. The lamp operates on any xiz-volt house supply, or with dry, storage, or flashlight batteries. A new lamp is needed for each flash. Requiring only a one-hundredth of a second to act, and being without hazard, the lamp will

make possible the taking of fiashlight photographs in places heretofore practically impossible to "shoot," such as in trains, airships and theatres, and under water, and by insurance companies requiring night photographs in all weather conditions.

NIAGARA NOT "COMMITTING SUICIDE."—An international board of engineers, appointed in 1926 by Canada and the United States to study the past, present, and future of Niagara, has presented its final report, with a message of reassurance to those who have predicted the exhibition of Niagara at a comparatively early date. The board finds quite unwarranted the statement that the famous cataract is "committing suicide" by degenerating into a mere cascade. These engineers find that the cliff now is cutting back at a decreasing rate; that the rate will continue to decrease; that in a century or two there will be little apparent difference in the Falls; and that inevitable recession will not endanger the Falls in less than a,coo years. Certain remedial steps are recommended for the even diffusion of water over the shallow rims of the great horse-shoe. In recent years a great deal of water has been diverted for power purposes, but it is claimed that, by diverting to the fanks part of the deep stream which pours over the centre of the cataract, the beauty of an even and far-flung towent may be maintained for many centuries.

Noise Measured in "Decibels."—A series of experiments in the measurement of noise has been conducted at the National Physical Laboratory at Teddington. A scale of measurements of loudness has been invented, zero being known as the "threshold" or point at which a noise becomes easily perceptible to the human ear. Degrees above this are calculated in "decibels," based on the fact that while loudness in the ear advanced by simple addition, the energy corresponding increased geometrically. Each "decibel" represents approximately the least change in loudness which the ear can detect. A table of noises has been worked out as follows:—

Home noises:		
Quiet whisper	10 d	lecibel
Quiet garden	20	11
Clock ticking	30	**
Soft radio music	40	**
Conversation	50	21
Loud radio speech	бo	,,
Loud radio music	70	,,
Restaurant noises:	,-	"
Quiet restaurant	40 d	lecibel
Moderate clatter	50	17
Average music	бо	"
Noisy clatter		*,
Loud music	70 80	•
Street noises :		"
Quiet suburban	20 d	lecibele
Quiet London	40	**
Quiet car passing	50	• • •
Moderate London traffic	-60	.,
Accelerating traffic	70	**
Motor horn	80	"
Pnenmatic drill		**
Vehicle noises:	90	"
Saloon car (s5 m.p.h.)		anthal
Quiet tram (windows shut)		
'Bus, train	50 - 60	,,,
Dus, wall	90	22

Tram, 'bus, train (windows open)

Quiet aeroplane	So decibels
Noisy Tube train	90 ,,
Noisy aeroplane	IIO ,,
It has been calculated that a Cup	
of roo, ooo at Wembley Stadium, all	
tinuously and rather loudly, would	provide as
much speech-power as would, if con	verted, light
a small electric lamp throughout	the game.
Alternatively, by the end of the	
acoustical energy expended would	
sufficient, if transformed into heat,	
cup of tea. New York traffic noises	
street and in the underground car	
ten decibels louder than in London	
the Niagara Falls roar equally loud	
arch offender of all is the aeroplas	ne engine at
close quarters.	

OCEAN BED SHIFTED.—The United States Coast and Geodetic Survey has confirmed the observations of Captain David Bone, commander of the Transylvania, that the ocean bed off Georges Bank, which is in the track of the great liners between Europe and New York, had shifted. An earthquake in 1923 shook the Atlantia seaboard from New York to Nova Scotla and Newfoundland. Subsequently Captain Bone made the discovery that the ocean bed, in an area approximately in latitude 47-20 north, longitude 56'20 west, had moved. Three attempts to touch bottom were without success. He anticipated that he would find a depth of 510 85 fathoms. He lost two lead lines with no results, and the third lead was paid out to aco fathoms in another futile attempt at sounding. In subsequent experiments by sea surveyors, however, a new depth of more than 350 fathoms was charted.

OIL-WELL 10,030 FT. DEEP.—The long projected depth of a 10,000 ft. oil-well has been reached by the drilling of a hole to 10,030 ft. in Ventura County, California. This establishes a record, and it is anticipated that American oil-engineers will not rest content until a two-mile hole (10,560 ft) has been drilled.

OLD ENGLISH MILE —In a paper in the Geographical Magazine, Lt. Col J. B. P. Carslake shows that the old English mile was not less than xx furlongs. This can be proved to be the mile of x,500 paces. It was identical with the leaga, the common unit of maximum linear measurement in early Saxon times. It was introduced into England in the first century B.C., and it is the measurement used in the Domesday survey. Apparently it was replaced by the mile of eight furlongs by the use in Saxon times of the Roman mile of x,000 passus, divided into eight stadia. So early as the ninthe century, the stadium became the equivalent of the furlong. This mile of eight furlongs was adopted by the Post Office on its establishment in the reign of James I. for the determination of rates of horse hire for postal purposes. Thus milestones eight furlongs apart were set up, and this mile became the accepted standard of measurement in Great Britain.

ORIENTATOR.—An instrument known as the "Orientator," for enabling architects and builders to determine visually from plans the direction in which the sun's rays will fall on any window or wall during summer or winter, has been produced by Messrs. Cooke, Troughton and

70

Simms. It consists of a flat metal ring, to the central end of a radius of which is attached a thread which ends in a ball representing the sun. A portion of a second ring (which, if complete, would form a short cylinder), is five I to it at such an inclination that if the first ring is horizontal the edges of the second follow respectively the paths of the sun in the sky at the summer and winter solatices. The instrument is placed on the plan with the centre of the horizontal ring over the window or wall and with an appropriately marked point in the north direction, and the thread is stretched by holding the ball between the fingers. When the thread rests against an edge of the inclined ring (on which a scale is engraved giving the hours of the day) its direction is therefore that of the sun's rays at the corresponding solatice. Observation of the plan from above then shows immediately what obstacles to sunlight are encountered. The instrument can be supplied for any latitude, north or south. It weighs rib, and is 6 in. in diameter at the base.

OZORE AND THE WEATHER.—In a discourse at the Royal Institution an ozone and its relation to meteorology, Dr. G. M. B. Dobson described the chief results which have been obtained from researches on the ozone in the upper atmosphere carried out in many parts of the world during the last five years. The ozone, which is situated at a height of some 50 km above sea-level, has a well-maked annual variation that is different in different parts of the world. At all places outside the tropics, there is a maximum in the spring and a minimum in the autumn, the range being greatest in high latitudes and least in low latitudes. In temperate regions there are large changes from day to day which are closely related to the weather conditions, cyclones and anti-cyclones each having their own characteristic distribution of ozone. The ozone in the upper atmosphere is responsible for shielding the earth from intense ultra-volet radiation from the sunwhich would cause serious effects if it reached the surface. It further causes the upper atmosphere at height of 40-50 km, to be at a temperature in the neighbourhood of the normal boiling-point of water. This, in its turn, gives rise to the zones of abnormal andibility of sound from large explosions at a distance of some hundred miles from the explosion itself.

PARAGUTTA.—For nearly 80 years the standard materials for insulating deep-sea cables have been gutta-percha and balata. In the Bell Laboratories Record Mr. A. R. Kemp gives a description of a new material, Paragutta, with which the new telephone cable between the United States and Cuba is insulated. Paragutta is a mixture of about 50 per cent. gutta-percha, 40 per cent. rubber, and 10 per cent hydrocarbon wax. Its mechanical qualities are fully equal to those of gutta-percha, its electrical stability in water is the same, but it has much better specific electrical properties. The nificture can be extruded on to the conductor in a continuous sheath of multiple layers free from mechanical defects. The insulated conductor has then only to be drawn through cold water, when it quickly sets into a firm covering sufficiently tough and flexible to resist rough handling in factory or cable ship. The specific conductance of Paragutta is only one-thirtieth

of that of ordinary cable gutta-percha, and its dielectric constant is so per cent. smaller. It is claimed that if Paragutta had been available to insulate the permalloy-loaded telegraph cable laid five years ago its speed would have been so per cent. greater, and its perenue-earning capacity increased so per cent.

PARASITES TO DESTROY A WHEAT PEST.—A cargo of 90,000 insects has been sent from England to Canada to wage war on the wheatsten sawily, which is Canada's most deadly wheat pest. They are grube of the sawily, and about 60 per cent, contrin parasites—smaller insects which will ultimately destroy their hosts. The insects will go at first to the parasite breeding laboratories at Belleville, Untario, and will afterwards be released in the Canadian wheatfields, where the parasites will be passed on to the local sawiles, and by this means it is hoped that the wheat pest will eventually be cradicated. Some parasitised sawiles, released in the sunner of 1990 in Western Canada, have settled down well in their new surroundings, and the lesser fleas are biting the little fleas to some purpose.

PEKING MAN — In an address on "Peking Man," delivered b fore the Bilish Association, Prof. G. Elliot Smith and that the discoveries still being made at Chor Kon Tren, near Peking, only confirmed the profound significance of the skull found in December, rgag. The skulls of the Peking man were of unquestionable geological ago (Early Pleistocene), and their qualities were not due to reconstruction. While definitely more primitive and generalised than Pithee, anthropies and Econthropies, they revealed characters not buther to known except in those, and gave coherence and conviction to our knowledge.

Photographing the Earth's Curvature,—Captain A W. Stephens, of the United States Ampy Air Corps, whose photograph of Mount Baniet, taken at a distance of 270 miles, was described in the 1931 Whittaker, has since succeeded in taking what is described as the first photograph to show the curvature of the earth's surface. It was taken from an aeroplane over a small town in South America. By using supersensitive plates he succeeded in photographing what was invisible to him, a range of the Andes some 300 miles distant and the peak of the volcano Aconcagua, 300 miles distant, as well as the unbroken Pampas intervening. The mountain range appeared as a straighth horizontal line, but the distant horizon of the Pampas was not straight, but bent slightly downward at one end.

Photographing the Stomach.—A camera which takes findilight photographs of the interior of the body is the latest application of photography to medical uses. It is the invention of two Austrian scientists, and has been demonstrated with success in London and the United States. The apparatus consists of a semi-flexible tube, carrying at one of its minute pinhole cameras, divided into two groups of eight each, and the resulting photographs can be pieced together to give a complete map in 16 sections. The tube is ½ in, in diameter, and the cameras occupy a space of about two inches, he patient swallows the cameras, which are

introduced by means of the tube. Between the two groups of cameras is a source of light operated by the transformer. This yields a flash for the duration of resorth of a second. Through the tube are passed two wires, one for the flash and the other to operate the shutter which uncovers the 16 pinholes of the cameras. The films used are about the size of a piece of confetti, and the photographs have to be en-larged one hundred times. The value of the instrument will, it is hoped, lie in enabling cancer and other diseases to be recognised at a stage where present methods of diagnosis are inconclusive.

RAIL-ZEPPELIN. — The Rail-Zeppelin, a propellor-driven coach, invented and constructed by Dr. Francis Kruckenburg, has made a trial by Dr. Francis Artickenburg, has made a trial run on the ordinary railway track between Berlin and Hamburg, over a distance of for miles, during which it attained an average speed of rog miles an hour and a maximum of rag miles an hour. The coach is 85 ft. long and stream-lined throughout. It is built of steel, aluminium, wood and fabric, and weighs r8 tons. The engine is of 500-li.p., capable of getting up a speed of 80 miles an hour within two minutes of starting. There are two compartments, one for smokers, and a luggage room and vestibule. It has accommodation for 40 passengers. Dr. Kruckenburg claims that the speed of 143 m.p h 18 by no means the maximum of the Rail-Zeppelm's possibilities, but he was obliged to keep within this limit in order to comply with the requirements of the State Railway.

RESTFUL SLREP .- Investigations at the Mellon Institute, Pittsburgh, by Dr. II. M. Johnson, on movements during sleep, show that the healthy movements during sleep, show that the healthy adult during deep sleep makes some gross change of bodily position on an average every 7-8 minutes. Every sleeper has a dozen or more very different poses in which he takes his rest. On any typical night he will make use of all, or any typical light he will make use of all, or this deep discounter for the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the sta nearly all, of this dozen, changing from one to another twenty to sixty times, according to his sensitivity to various kinds of bodily irritation. Among different persons, some have a strong preference for supme positions, others favour prone ones. By means of an ingenious device, photographs were obtained of every change of position assumed by a sleeper during a night, and show an extraordinary range of positions.

RINGED PLOVER AND ITS EGGS .- A series of experiments relating to the eggs of the ringed plover has been carried out by Mr. George Marples in an area where he had more than forty nests under obsorvation. When the eggs were removed a short distance from the nest, the birds found them and dragged them back the nrus round them and dragged them back; but they also dragged and sat on egg-shaped pebbles which had been painted to resemble their own eggs. The disguising of the shape of their own eggs by adding lumps of plasticine their own eggs by adding lumps of platticine did not deceive them, nor did painting the eggs with bright yellow, blue and red. The theory that the ringed plover keeps its eggs in the positions of the cardinal points of the compass was tested, with the result that after the deliberate derangement of the clutches in zsr cases, it was found that so were rearranged exactly north and south, 12 were nearly but not quite restored to the cardinal point position, ful experiment has been made by engineers

and 30 clutches remained in disarrangement, north-east and north-west. Tests with various scents placed on the eggs indicated that the birds were deficient in sense of smell.

RUBBER STATUES. - Public statues made of rubber are a practicable possibility of the future, as the result of tests made by the Dunlop technical staff for the memorial tablet to the late J. B. Dunlop, in Belfast. The memorial was made from a solid block of ebonite, or hard rubber, weighing 270 lb., of which 70 lb. were removed by the sculptor in chippings and shavings. The block was built up from layers of unvulcanised counte under a roller weighing s cwt., and trimmed to fit a special steel mould, where it was placed under a pressure of 250 tons and "cooked" for more than 120 hours. The portrait of Dunlop was pointed off from a full-sized clay model, and the lettering was done by a burr with six microscopic cutting edges, such as is used by dentities in preparing teeth for filling. For cutting and carving the block was perfect throughout. It did not vary in density or colom, and it was capable of being freely cut without cracking, giving a good sharp finish.

SAFETY CABLE IN MINFS .- A cable has been invented by Dr. A. G. Allsop, at the Safety in Wines Research Board laboratory in Sheffield, which, it is claimed, may enable miners to discard the small hand lamps and work at the coal face under the glare of flood lighting, and result in the abolition of nystagmus—miners' eye disease.
Dr. Allsop's cable differs from the ordinary electric cable in that a screen of fine wires forms a sort of cage round the main cable, and if any one of these wires breaks, by being run over by a tub or othewse injured, the current through the main cable is automatically switched off. Only a small current runs through the screen wires, and if these are damaged the current is not enough to cause a spark capable of igniting fire

SKYSCRAPER TO SWAY IN THE WIND .- The highest skyscraper in the world; is the Empire State Building in New York, which was formally mangurated on May 1, 1931, by President Hoover, in Washington, pressing an electric key. The structure has been erected on a site previously occupied by the Waldorf Astoria Hotel. The occupied by the wander Astona Hotel. Indeed, office building proper has eighty-six stories and is x,048 ft. high to the base of the mooring mast for dirigibles, and x,248 ft. high to the top of the mast. It will have a working population of 25,000 persons when fully occupied. There are more than x0,000,000 bricks in the building, and 57,000 tons of steel, enough to build a double-track railway from New York to Montreal. There are also 6,400 windows and 58 lifts, which journey through seven miles of shafts. A lift takes so seconds to make a non-stop trip to the eightleth floor. The steel cage of which the skysoraper consists is so arranged that when the wind blows it yields slightly, but at the same time it locks together more strongly than ever. It has been calculated that the wind pressure on any one face of the Empire State Building may rise to 4,340,000 pounds, and that the swaying motion of the skyscraper in a strong wind will take four seconds.

connected with the Southern California Edison Company, in the use of electricity to heat the soil round plants so as to force their growth, and so place the product on the market at an earlier date and at a higher price. Two exactly similar plots of land were taken. One had insulated wires running through it about 4 ft. apart and at a depth of 8 in. The current in the wires was regulated by a thermostat so as to maintain a temperature of about 70° F. Current flowed on an average two hours out of every five. The other plot was prepared in the same way, but was not electrically heated. Cucumber seeds were planted in both plots, in rows about 4 ft apart. It was found that more than one half of the crop in the wired portion had matured and been marketed before the first cucumber had reached maturity in the unheated plot. The net revenue obtained from the electrically heated plot was about £so greater than from the other.

STARLIGHT TO START MACHINERY.—Rays of light from Arcturus, which left that star during the Chicago World Fair of 1893, are to be captured, converted, amplified, and used to start machinery in the Hall of Science at the opening of the World Fair in Chicago on June 2, 1923. It is hoped to accomplish this feat by collecting the hight rays in a 40 in. telescope and passing them through a photometer connected with an electrometer, which in turn will be connected with the switches controlling the machinery.

TALKING BRACON.—Messrs. Charles A. Stevenson and David Alan Stevenson, engineers to the Northern Lighthouse Board, have been awarded the Thomas Gray Memorial Trust Prize of £100 for their invention of the "talking beacon" This "talking beacon" which is installed at Cumbrae Lighthouse on the coast of Ayr, consists of a combination of fog-signal and wireless transmitter, and enables a ship fitted with even the simplest form of wireless receiver to ascertain her distance from the lighthouse up to about five miles in thick weather. The fog-signal consists of three blasts, followed by a short silence, and then two further blasts. At the same time, on a wireless receiver, a listener hears—(a) the name of the "beacon" in speech (Cumbrae), (b) the three blasts of the fog-signal; (c) counting in speech in cables and sea miles up to five miles; and (d) the two blasts of the fog-signal. This is followed by a silent interval lasting 27 secs., and is then repeated. Immediately before each mile is spoken a bell is sounded. The distance which the observer hears in his receiver coinciding with the end of the third blast heard through the air gives him the distance of his ship from the lighthouse. The spoken words in the signal emanate from a gramophone record, which revolves on a turn-table, which in turn is engaged and disengaged by means of a clutch with another turn-table kept constantly revolving by air turbine or motor.

TRIEGRAMS BY TYPEWRITER.—The General Post Office is sotting up the first teleprinter exchange, by which a person sitting in his own office may send telegrams privately, or get into communication with other subscribers and carry on written conversations with them when subscribers wish to get into touch with each other they will type out an exchange is durable discomforts, for the temperature isside the sphere was most impleasantly high while each other they will type out an exchange

number which will then be automatically switched on. Fifty words a minute is a low estimate of the speed which may be obtained by a proficient operator on the teleprinter. There will be ample opportunity to attain a high rate of speed, since subscribers will become their own telegraphists, the speed of the instrument being limited only by the operator's abilities. Among the advantages of the system are that a typed record is kept of all messages at the sending and receiving ends; there is great speed of communication, secrecy, and the possibility of sending messages even if there is no attendant at the instrument of the called subscriber.

TELEVISION PROGRESS.—The prophecy that "television will soon be in every home" seems likely to be fulfilled in the United States and Great Britain in the next few years. In the United States a transmitting station of enormous power, which will be used in connection with the National Broadcasting Company of America, is National Broadcasting Company of America, to being erected, and it is expected that in 1932 television will be installed in thousands of American houses. The first television wedding that of Mr Frank Borie du Vall, an engineer, and Miss Grace Lilian Jones, took place in New York. York. It was conducted in a skyscraper studio, and hundreds of television enthusiasts " looked in," and thousands of wireless-set owners listened in. Mr. J L. Baird's plans to televise the Derby in. Mr. J. L. Bairt's plans to televise the Derby race—for the first time in history—proved a great success. Seven televisors were equipped and connected up with the Baird Studios. Punctually at a 45 the first actual scenes came filtering through; these clarified after the race had started, and within a few minutes Cameronian, Orpen and Sandwich were to be seen quite distinctly passing the winning post. The surging crowds, and the faces of the owners and their friends as they came forward to lead in the victors, were clearly seen. Mr Baird has since announced that by improving the optical system and by adopting a more efficient method of "scanning" it has been possible to double the width of the pictures and show scenes with as many as eight full-length figures This opens up the opportunity of increasing the entertainment value of the programmes.

TEN MILES HIGH—On May 27, 1931, Prof. A. Piccard, of the University of Brussels, accompanied by Heir Kipfer, ascended at 4 a.n. from Augslung, Bavana, in an airtight aluminium sphere, about a metres in diameter, raused by a balloon which was stated when fully inflated to have the capacity of half a million cubic feet. Anticyclonic conditions prevailed at the time, and the balloon, after remaining in the sir for 18 hours, fell at a spot about 16 kilometres to the south Prof. Piccard succeeded in leaching a height of about 183% kilometres, probably penetrating into the stratesphere by some 4 kilometres, and beating "Il previous records of a manned balloon or aeropiane. On the descent trouble occurred with the gas valve, and after long delay the balloon landed safely on the Gross Gurgi glacter in the Austrian Tyrol. The air in the cabin was renewed by two oxygen cylinders, each capable of maintaining a good atmosphere for eight hours. The aeronauts suffered considerable discomforts, for the temperature inside the sphere was most unpleasantly high while the external air was 55°C. below freezing point, the tempes solar radiation in the rarefied

atmosphere. Prof. Piccard found that at a height of 48,000 ft. the conductivity of the air was only half as strong as at the height of 28,000 ft. previously reached by balloonists. A second observation was that the cosmic rays could not proceed from any ordinary type of radio-activity. He was of the opinion that they seemed to have their origin not in massive bodies, but in attenuated bodies which possessed not more than 100 grammes per aquare centimetre of density at their surface. He could not preceed from any ordinary type of claimed that his ascent had proved that the seroplane of the future would seek to fly in the higher altitudes, because the atmosphere there enabled a speed to be attained three times greater than that which was possible in the lower strata. The aeroplane industry could confidently build with this object in view, because these upper altitudes presented no difficulty from the physiological point of view provided that aeroplanes were fitted with airtight cabbias.

TREE RINGS AND SURSPOT CYCLE.—Dr. A. E. Douglas, whose work on the correlation between the growth-rings in trees and the sunspot cycle has given a probable sunspot curve for many centuries, has carried the study of the rings in certain districts back to yoo R.C. By examining the timbers in some ancient Indian buildings he has been able to give the dates when the trees were cut, and thus to date the buildings. Dr. Antevs, of the University of Stockholm, has found correlation between the structure of clay layers in ancient lake-beds and the sunspot cycle. Both the tree-rings and the clay layers are supposed to depend directly on the rainfall.

TRENCHES INTHE NORTH SEA BED.—In recent surveys of the North Sea a trench 130 fathoms deep has been discovered about too miles east of Montrose. The Devil's Pit, as it is called, is the deepest of a group of depressions found in a floor which was supposed to be an undulating plain at \$ to 50 fathoms. Another group of depressions, with a greatest depth of \$7 fathoms, occurs farther south, about 65 miles east of Berwick. Professor J. W. Gregory does not accept the suggestion that the trenches have any connection with the carthquake in eastern Scotland and southern Norway on January 24, 1297. He believes that the features are not new, but were formerly missed by soundings having been too far apart. He argues that the trenches are remains of the pre-glacial valley of the Rhine, and date from the days when the Rhine and its British tributaries discharged to the North Sea about a hundred miles east of Kinnaird Head. The existence of these pre-glacial trenches adds to the improbability of a Scandinavian ice-sheet having reached the British coast, since it would have filled the trenches with moraine matter. In this case floating ice must have been responsible for the transport of Scandinavian boulders to eastern Bagland.

TWO-MILLIONTH TELEPHONE.—The King has accepted the s,coc,cocht telephone for use in Buckingham Palace. The instrument is one of the latest hand-microphones, finished in old gold. It carries a decorative plate surmounted by a crown, and bearing the inscription:—"This instrument, installed for his Majesty, King George V., is the s,coc,cooth telephone consected with the Post Office system.—June 1931."

When Sir William Thomson (Lord Kelvin) introduced the telephone into this cenutry by exhibiting Professor Graham Bell's instrument to a meeting of the British Associatios, at Glasgow, in 1876, few people could have foreseen the enormous development which has taken place in 55 years. In those days, the world marvelled at the possibility of two persons conversing over a few yards of wire. To-day, with London as the telephonic centre of the world, subscribers talk every day to the most distant parts of the globe as easily as if they were speaking to friends a few streets away.

TRAIN WITH RUBBER TYRES.—A railway motor-driven coach, fitted with pueumatic tyres and capable of a normal speed of 60 miles an hour, was demonstrated on July 22 on the Palatseau-Chartres branch line. It may transform the working of branch railway services if all that is claimed for it is substantiated. The train consisted of a 24-h.p., 24-seater coach, having pneumatic tyres fitted on its flanged wheels. The tyres were of special shape, stronger and thicker than the type used in motor-cars, in order to bear the greater weight of the railway coach, and wider and flatter than lorry tyres. The coach reached a speed of so miles an hour in 650 yards, and was brought to a standatill within 100 yards, while the demonstrators claim that, by use of the new type, it will be possible to dispense with signal-men, level-crossing keepers and guards. Each coach is manned with a driver only, and similar coaches can be despatched at 100-yard intervals without danger of collision.

Wireless Typewriter,—A demonstration of a wireless typewriter, invented by Mr. Glen Watson, and known as the "Watsongraph," has been given in Detroit. The instrument enables an operator sitting at a typewriter to type out a message which is automatically and simultaneously conveyed by short-wave wireless to another typewriter at any distance. The receiving typewriter at any distance. The receiving typewriter automatically types out the message as sent. A transmitter for ordinary commercial use can be made, to weigh only about solb. The speed of transmission is limited only by the skill of the operator, since the typewriter can record x,soc letters a minute. Any receiving typewriter, synchronized with the transmitter, could be tuned in wherever the receiver might be, and the message could be typed simultaneously on several receivers. If secrecy is desired, it can be arranged that only the transmitter and the required receiver are synchronized. The owner would thus be independent of all public means of communication. The typewriter could be carried on police patrol cars and used for sending messages to head-quarters in absolute secrecy without code. It would also revolutionize newspaper work, since, among other things, it would enable correspondents to evade a censorship.

WORLD'S FASTHST TRAIN.—The "Cheltenham Flyer," the Great Western express, drawn by the Launceston Castle locomotive, established a world record on Sept. 14, 1931, by running from Swindon to Paddington, a distance of 77% miles, in 59 min. 30 sec., an average of 78 miles an hour. On Sept. 15 the train made the run between Swindon and Paddington in 58 min., at an average speed of 80 miles an hour.

NEW books continue to be published at the rate of about forty a day, and several new publishers have started business during the year. This would seem to imply that current literature is in a healthy state. On the other hand, book-sellers have not escaped the prevailing "pinch," sellers have not escaped the prevailing "pinch," and are exploiting various contrivances to stimulate the buying (rather than the borrowing) of books. Impoverished Germany, it is to be noted, with a population only half as large again as that of Great Britain, manages to assimilate twice our output. Some readers, dazed by the volume of new works, delegate selection to book societies and clubs; many, probably, would hear with complacency that Mr. Snowden had extended the Entertainment Tax to new books, and hope that a reduced birth-rate of these would give renewed vitality to neglected older masterpieces.

Lord Crawford wrote last April in The Ninetenth Crawtory. "If critics, for a change, would tell us what is bad; if they would occasionally recommend a book which was not produced the day before yesterday, better still if they would enging a close time—one mouth two mouths. enjoin a close time—one month, two months, three months! how justly would they earn our

praise."

If the year has not produced any book of outstanding celebrity, the output of good litera-ture, particularly in the realms of Biography, Philosophy and Science, shows no falling-off. Novels—appearing at the rate of to a day—still tend to grow longer, but the spate of sex-psychology seems somewhat to have spent its strength; studies in terror and brutality and the gruesome to some extent taking its place. Crime and detective stories hold their vogue, but their writers are realising that intricacies of plot need not be spoilt by crudities of style, or perfunctory love-interests. Whilst the War naturally continues to figure in most contem-porary fiction, War books, as such, decline in number.

At the Annual Meeting of the Associated Booksellers at Harrogate last May, Mr. Geoffrey Faber, in an interesting address, prophesied that the serious and difficult time through which we are passing will lead to an increase in the demand for more serious literature, "not cymcal, demand for more serious literature, "not cylineal, not destructive, but rather reconstructive. People," he said, "begin to get tired of drifting, of not knowing where they are going, they begin to want to read books which will not only ask questions but try to answer them. I am sure," he added, "that the next ten years will see a very marked increase in the sale of such books. I think there will be a big swing back towards religion, perhaps even philosophy and poetry, a reaching out for some firm ground to stand on, a realisation that it's not enough just to have a good time, and that the twentieth century hasn't yet done much to give life a meaning. And I think this reaction is going to be helped by sheer boredom with too much easy mechanical amusement. Cars, cinemas, wireless—how ex-otting and absorbing these things are for a time, and, after a time, how easy it becomes to have too much of them." Sir Nigel Playfair has also the pendulum swings back; but, like the great Foucault one in the Science Museum, it never returns precisely to the same starting place as

London publishers, including works by Havelook Ellis, Rosita Forbes, Gerhardi, Maxim Gorki, Hergesheimer, Aldous Huxley, Sinclair Lewis, Somerset Maugham, T. F. Powys, Eric Remarque. Marie Stopes, John van Druten and Marcel Prevost.

Amongst literary events of the year under review may be mentioned the celebration of the centenary of Christina Rossettl, and the ter-centenaries of John Donne and Dryden; the influentially signed appeal on behalf of Sir William Watson; the unveiling of memorials to Pierre Loti in France, and Rupert Brooke in Scyros; the interesting exhibitious at Mesars. Bumpus's of fine bindings, of Byron-Murray documents, &c.; the achievement of "Science as a best-seller" in the sale of 80,000 copies of Jeans's "Mysterious Universe"; and the publication of the first volume of the new British Museum Catalogue, for which the subscription price is £400. Notable features of the year have included the Mundy nus (Gollancz) experiment of new three shilling novels—(similar dollar issues are proving successful in America); the popularity of "Omnibus" collections; the increased length of the stories by leading novelists; and the large number of translations from German and other foreign works of fiction.

Literary Luncheons, at which popular authors may be seen and heard in postprandial discourse, have proved very attractive; and booksellers, in their efforts to improve the "lay out" of their premises, are realising that the best book society is to be found in a well arranged bookshop, with intelligent but discreet attendance, and room to

browse about.

Ir Alden, at the Booksellers' Conference last spring, recalled with emphasis the reference to book-selling in the Report of the Departmental Committee on the English educational system.
"In every town," said this report, "the book-seller's shop should become what in University cities and in one or two other favoured spots it is already, a centre of literary and artistic interest and enlightenment, a place where the best books, new and old, can be expected at leibuie.

Whilst the weekly book talks of the B.B.C. have been generally welcomed, the criticism of books has, not unnaturally, been itself the subject of a good deal of occurt criticism. As regards quantity, it was stated that the whole space devoted by the London press to reviews only provides for about thirty lines each to one-fifth of the new books published; whilst, as to quality, the selections of the book clubs and societies, and the reviewing of fiction by well known novelists have been called in question with some

severity. "If our critics became young (wrote the editor of The Bookman, courageously) and our novelists old, we might be rescued from the present state wherein criticism is a laughing-stock and fiction

a disgrace.

The boosting of second-rate books is likely to prove a boomerang both for their authors and tooksellers. Masterpieces do not happen twice a week.

Unlike the product of the graphic arts, the appeal of literature is not instantaneous. To appear of interaction and interaction appear of interaction induce them, books have got to be read; solvustur ambulando, and a terribly pedestrian joetrot it may prove. Hence the necessity, and the immense importance, of guidance, of critical interactions. returns precisely to take all, is progress.

The Irish Censorship, it may here be noted, the immense importance, of guidance, of critical has banned (up to June, 1931) 89 books issued by class and reviews. The complaint re-echoed from

various quarters during this past year is that criticism has become, as regards popular literature, not indeed corrupt, but so indiscriminately amiable and so exaggerated in eulogy as to be a snare and delusion. The public, perplexed and incensed at this manufacture of fictitious masterpieces, turns to the book clubs to guide its choice; and in accepting their selections is doubtless protected from many experiments in trash. But it must be obvious, without enquiring into their constitution, that these societies are business and not merely philanthropic adventures, and that their commercial success must largely depend on the very large discounts obtainable on orders, before publication, of fifteen or twenty thousand copies—allowances said to amount to sixty per cent. and even more of the published price. Such business is perfectly legitimate, but its implications must be frankly recognised; the sudden (and perhaps short-lived) exaltation of a new author may not conduce to his ultimate reputation; the concentration of emphasis upon a single book may prove unduly hard on others of almost equal merit; and in so far as these clubs tend to damage the bookseller's legitimate business their influence can only be deplored

business their influence can only be deplored.

Awards of some of the Literary Prizes during
the past year are appended: Priz Goncourt"Malaisie," by H. Fauconnier; James Tait Black
Memorial-" Miss Mole," by Miss E. H. Young,
and "Bengal Lancer," by Major Yeats-Brown;
Nobel Prize-to Sinclair Lewis; German Fouth
Prize-" Joseph and Peter," by Anton Gabel;
Northchige Prize-" Regain," by Jean Giono;
Hawthornden Prize-" The End of the World,"
by Geoffrey Denue: London, Peo Club." "Tolyth hy Geoffrey Dennis; London Pen Club—"Tohit Transplanted," by Stella Benson; Femina Vie Heureuse—"High Wind in Jamaica," by Richard

Davies.

The following are notable amongst book sale prices: Blake's "Songs of Innocence" (1780-94), \$\pi_1,500\; Samuel Pepys, Letters, \$\pi_1,500\; Shuke-peare First Folio (1623), catalogued at \$\pi_18,000\; Holograph MS. of Byron's "Don Juan," Cantos X-XII, \$\pi_5,000\; "Pickwick," prime copy in parts, \$\pi_8,600\; Block Book, "Passio Christi," \$\pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi_{2,200}\; Cantos \pi

£3,300.
Twenty-three of the York Minster Caxtons were, very injudiciously, sold to America for

Ker, oo; Injunction; Some Associated where the second speaking generally, however, there has been a decided slump in great sale prices since the peak records of the Kern Sale in 1923; and the drastic marking down of the catalogued prices for many first editions of modern authors during the past year should also be noted by collectors who indulge in this very speculative whim.

The list of deaths amongst literary men and

The list of deaths amongst literary men and women during the year includes the names of Arnold Bennett, Sir Hall Caine, Dr. H. R. Hall, Katharine Tynan (Mrs. Hinkson), Ronald Macfle, Oliver Madox Hueffer, Dr. C. H. Turner, Lord Birkenhead, and Lady Newton.

In appending a classified list of selections from the books of the year it should be noted that the period covered is from October, 1930, to September, 1931; that translations and students' manuals are not, as a rule, included; and that where only a very small percentage of the year's output can be listed many good and useful books must obviously be left unnoticed.

"Miss Mole," and "Three Daughters" by Jane Dashwood were also recommended to the Paris Committee for their final selection.

ART.

"Thirty Years of British Art, by Sir Joseph Duveen; "An Introduction to the Language of Drawing and Painting," Vol. II, by Arthur Pope;
"Persian Art," edited by Sir E. Denison Ross
(the Winter Exhibition at Burlington House led to several publications on this subject); "The Philosophy of Art," by C. J. Ducasse.

#### BIOGRAPHY.

BIOGRAPHY.

"Cnapters of Autobiography," by the 1st Earl of Balfour (an interesting fragment, political rather than personal); "The Ladies of Llangulen," edited by Mrs. G. H. Bell; "Henry Irving," by Gordon Craig; "St. Loe Strachey," by Amy Strachey; "John Wilmot Earl of Rochester," by J. Frinz; "I'm Alone," by Captain Jack Randell; "Verney Letters of the 1sth Century," edited by Lady Verney; "Wolsey," by Hilaire Belloo; "The Diartes of John Bright," edited by R. A. J. Walling; "Pepys, His Life and Character," by John Drint-water; "Lord D'Abernon's Diary" (grd and concluding volume); "Comments and Criticisms," by Sir John Simon; "Whistler," by James Laver; "The Bise of General Bonaparte," by Spenser Wilkinson; "Al Capone," by F. D. Pasley (the amazing story of the bootleggers and racketeens); "Men and Memoirs," by W. Rothenstein (an artist and his friends); "The Private Papers of James Boswell" (from Malahide Castle, in the collection of Colonel Isham, prepared by Geoffrey Scott and F. B. Pottle, Vols. VIII-X); "Marshal Foch's Memours," translated by Colonel Bentley Mott; "Life and Letters of Edmund Gosse," edited by Evan Charteris; "An Oxford Portrait Gallery," by Mrs. Janet Courtney; "According to the "Life and Letters of Edmund Gosse," edited by Evan Charteris; "An Oxford Portrait Gallery," by Mrs. Janet Countney; "According to the Flesh," by Fleta Campbell (a biography of Mrs. Eddy); "World Without End," by Helen Thomas; "Bulwer: a Panorama," by Michael Sadleir; "Portraits in Miniature," by Lytton Strachey; "Son of Woman: the Story of D. H. Lawrence," by J. Middleton Murry; "Swift," by Carl van Doren; "Savage Messish," by H. S. Ede; "Sir Philip Sidney," by Mona Wilson; "The Diary of a Country Parson, 1971-180s," the last volume of James Woodforde; "The Odyssey of an Out of Work," by T. Horsley; "Millicent Garrett Fawcett," by Ray Strachey; "Florence Nightingale," by I. B O'Malley, "After Ten Years," by Constance Malleson (Colette O'Neil); "In My End is My Beginning," by Maurice Baring (Mary Queen of Scot's story as told by her four Maries); "Life of Robert Marquis of Salusbury," by Lady (Swendele) Cecil (Vol III). "Marshel Ivanter." Queen of Scot's story as told by her four Maries);
"Life of Robert Marquis of Salasbury," by Lady
Gwendolen Cecil (Vol. III); "Marshal Lyautey,"
by Andre Maurois; "Henry Kingsley: Towards
a Vindication," by S. M. Ellis (a timely apologia);
"Charlton" (Autobiography of an Air Commodore); "Ellen Terry and Bernard Shaw: a Correspondence" (delightful love letters); "Time
Was," by W. Graham Robertson; "A Bacheloi's
London," by Frederic Whyte; "Guilty but
Insane: a Broadmoor Autobiography," by Warmark; "Nelson," by Clennell Wilkinson; "Lord
Kilbracken's Reminiscences"; "Mock Tuitle:
Memoirs of a Victorian"; "Friends and Adventures," by T. (of Punch); "Autobiography of
Lincoln Steffens"; "My Eighty Years," by R.
Blatchford; "The Duke," by Philip Guedalla;
"Everyman Remembers," by Ernest Rhys.

#### ESSAYS AND BELLES LETTRES.

"The Resurrection of Rome," by G. K. Cheserton: "Essays and Observations," by Lord terton; "Essays and Observations,"

Hewart; "The Victorian Tragedy," by E. Wingfield-Stratford; "On Being Ill," by Mrs. Woolf; "It's a Fine World," by Robert Lynd; "Vulgarity in Literature," by Aldous Huxley; "England's Crisis," by André Siegfried (a friendly and penerating indictment); "A Treasury of English Aphorisms," by Logan Pearsall Smith; "Out of Soundings," by H. M. Tomlinson; "Conversations with a Cat and Others," by Hilaire Belice; "A Cousideration of Thackersy," by George Saintbury (a valuable re-view by our veteran critic), "Essays of a Catholic," by Hilaire Belice; "Music at Night," by Aldous Huxley; "Visibility Good," by E. V. Lucas; "Countries of the Mind," by J. Middleton Murry.

### FICTION.

"Ou Forsyte Change," by John Galsworthy, who is reported to have another family Saga in preparation; "The Fool of the Family," by Margaret Kennedy; "Grand Hotel," by Vicki Baum; "Cakes and Ale," by Somerset Maugham; "Imperial Palace," by Arnold Bennett, his last story; "The Man who Died," by D. H. Lawrence, completed just before his death; "But not for Love," by B. K. Seymour; "Mackerel Sky," by Helen Ashton; "Philippa,' by Anne D. Sedgwick; "The Diary, of a Provincial Lady," by E. M. Delafield; "Certain People," short stories by Edith Wharton; "Bitter Tea," by Grace Z. Stone; "The Deepening Stream," by Dorothy Canfield; "A Woman on her Way," by J. Van Druten; "Flamenco," by Lady Eleanor Smith; "The Winding Lane," by Sir Percy Gibbs; "Hunger and Love," by Lionel Bitton; "Tolit Transplanted," by Stella Benson; "Richer Dust," by Storm Jameson, completing the Hansyke trilogy; "Susan Spray," by Shella Kaye Smith; "Juan in America," by Eric Lunklater; "Father," by the author of "Elizabeth and her German Gardon"; "The Loving Spirit," a promising first novel by Daphne du Maurier; "The Career of Julian Stanley Williams," by Adrian Alington, a five ardinerement: "Red Lake Crimson," by Jace Paradline; spirit," a promising first novel by Daphne du Maurier; "The Career of Julian Stanley Wilhams," by Adrian Alington, a fine achievement; "Red Like Crimson," by Jane Paradine; "The Phenix-Kind," by Peter Quennell, "Broom Stages," by Clemence Dane; "Star Dust," by D. L. Murray; "All Passion Spent," by V. Sackville-West; "The Grassloppers Come," by David Garnett: "Challenge to Clarissa," by E. M. Delafield: "Four Handsome Negresses," by R. H. Baptist; "The Storm Riders," by Frank Dilnot; "Judith Paris," by Hugh Walpole (Rogue Herries' daughter); "Early Closing," by Miss D. Wynne Willson, an excellent first novel of school life; "S.S. San Pedro. A Tale of the Sea," by James Cozzens; "Return I dare not," by Margaret Kennedy; "Mad Puppetstown," by M. Farrell; "Month of May," by Jane Dashwood. "Sirging Tide," by K. H. Dorret; "And Now Good-bye," by James Hilton; "The Blanket of the Dark," by John Buchan; "Aphrodite in Aulis," by George Mooie.

#### CRIME STORIES.

"Plain Murder," by C. S. Forester; "Green Lane," by Alec Brown; "Murder at Fenwold," by C. Bush; "Murder of Judge Macfarlane," by Mary Plum; "The Second Shot," by Anthony Berkeley; "Murder at the Pageant," by V. L. Whiteclurch; "The Box Hill Murder," by J. Fletcher; "The Bill Street Murder," by Sydney Fowler; "Persons Unknown," by Hallewell Sutcliffe; "Who Goes Home," by A. P. Nichol-

son; "The Hanging Woman," by John Rhode; "The Sands of Windee," by A. W. Uffield; "The Yellow Viper," by S. Fairway; Mr. H. D. Thompson has produced in "Masters of Mystery" a comprehensive guide to the best "Thrillers."

#### HISTORY.

HISTORY.

"Liason xo14," by Brig.-Gen. Spears; "Turning Points of History," by the late Lord Birkenhead; "Loyalties. Mesopotamia zo14-72," by Sir Arnold Wilson, "The Jameson Raid," by Hugh M. Hole; "England in the Nineteenth Century," by A. P. Fremantle (the second volume, 266-0); "Survey of International Affairs, 1929," by A. J. Toynbee; "An Economic Hittory of Anstraln," by Edward Shann; "Official History of the Great Warr "(Egypt and Palestine, Vol. II); "By Gness and by God," by William Gny Carr (Submarine War Adventure); "The Suffragette Movement," By Sylvia Pank-burst; "A History of Enrope 1875-1923," by Sir John Marriot; "Mesopotamia 1917-80," by Sir Arnold Wilson; "Official History of the War," Naval operations, Vol. 5, by Sir H Nowbolt; "King, Queen, Jack," by Milton Waldman; "At G.H.Q," by Big.-Gen. John Charteris; "The Endless Adventure," Vol. 2, by F. S. Oliver; "Advance from Mons," by Bloem, from the German side, "Missing," by Bruce Blackwood. Blackwood.

#### MISCELLANEOUS

"Thy Servant a Dog," edited by Rudyard Kipling; "Flyng," by Clande Grahame-White; "Archie and Mehitabel," by Don Marquis; "5-me Bookhunting Adventure," by E. S. Garnett; diverting tales and himorous character studies by a bibliophile; "The Anatomy of Bibliomania," by Holbrooke Jackson; "Seventy Fathoms Deep," by Scott, record of the work of the Astatus. the Artiglio.

#### POETRY AND DRAMA.

"The Poens and Verses of John Keats," edited by J. Middleton Murry, "The Winding Stair," by W. B. Yeats; "Poems of Edmind Blunden"; "The Signature of Pain and other Poems," by Alan Porter; "The Torch Beaters, Vol. III. The Last Voyage," by Alfied Noyes, "The Apple (art," by Bernard Shaw, with a very Shavian preface; "Last Poens," by John Preoman; "Ploughed Earth," by C. C. Albott, "New Poems," by A.E. (G. W. Russell); "Verses," by Elizabeth Daryinsh; "Poems of Wilfred Owen," edited by Edmund Blunden, "Post Mortem, by Noel Cowaid, a war inquest; "The Cacadas," by Aldous Huxley, "Poems 1956-30," by Robert Graves; "A Collection of Poems (witten between the ages of 14 and 17)," by Joan Easdale; "Shorter Poems," by Edward Davison; "T. S. Eliot A Study," by T. McGreevy Mi Williamson says Eliot mist", by Edward Davison; "T. S. Eliot A Study," by T. McGreevy Mi Williamson says Eliot mist", by Edward Davison; "T. S. Eliot A Study," by T. McGreevy Mi Williamson says Eliot mist", by Edward Davison; "T. S. "The Poems and Verses of John Keats," edited a force instead of being defended as a fad.

#### POLITICS AND ECONOMICS.

"A Searchlight on America," by J. Truslove "A Searchlight on America," by J. Truslove Adams; "Dawn in India," by Sir Francis Yonnghusband; "The New Survey of London Life and Labour, Vol. I. Forty Years of Change"; "Account Rendered 1900-1930," by Sir Ernest Benn; "A Treatise on Money," by J. M. Keynes; "Democracy on Trial," by Lord Eustace Percy; "Hitler," by Wyndham Lewis; "South Africa," by Jau Hofmeyer, dealing with the Colour problem; "The Terror in Europe," by H. H. Tiltman; "India Insistent," by Sir Harcourt Butler.

#### SCIENCE AND PHILOSOPHY.

"Man and his Universe," by J. Langdon Davies: "The Biological Basis of Human Nature," by H. S. Jennings; "The Philosophy of the Good Life," by Dr. Gore; "Social Control of the Mentally Deficient," by Dr. Stauly Davies; "The Conquest of Happiness," by Bertrand Russell; "Instinct and Intuition," by G. B Diblee; "The Mysterious Universe," by Sir James Jeans; "The Faith of a Moralist," by Professor Taylor; "Climate," by W. G. Kendren; "The Science of Life," by H. G. Wells, Julian Huxley and G. P. Wells; "New Discoveries Relating to the Antiquity of Man," by Sin Arthur "Man and his Universe," by J. Langdon Huxley and G. P. Wells; "New Discoveries Relating to the Antiquity of Man," by Sit Arthur Keith; "The Stars in their Courses," by Sir James Jeans; Everybody's Business," by Hartley Withers; economies of to-day; "The Scientific Outlook," by Bertrand Russell; "Grades of Significance," by G. N. M. Tyrell (Psyche Research); "Mind and Matter," by G. F. Stout; "The Philosophical Basis of Biology," by J. S. Haldane.

The Centenary Meeting in London, at the end of September, of the Biltish Association for the

of September, of the British Association for the advancement of Science, has stimulated interest

in the works of our leading Scientists of which the principal booksellers arranged special displays.

### SPORT, TRAVEL, TOPOGRAPHY.

"Fly Fishing," by Viscount Grey (enlarged edition); "A Year on the Great Barrier Reef," by Dr. C. Yonge; "The Kanchenjunga Adventure," by F. S. Snythe; "Survey of London," Vol. XIII (Westminster and Whitehall); "The Vol. XIII (Westminster and Whitehall); "The Andree Diaries," translation by E. Adams Ray; "Africa View," by Prof. Julian Huxley; "Green Hell," by Julian Duguid; "Impacts," by Douglas Goldring; Oxfordshire," by Earl of Mayo, S. D. Adshead and P. Abercrombie; "London Memories," by St. John Adoock; "Jungles Preferred," by Janet Miller; "Jungle Ways," by W. B. Seabrook.

#### THEOLOGICAL.

"Science and Religion," a symposium by various churchmen and scientists; "The Prospects of Humanism," by Lawrence Hyde; "The Nature of Belief," by M. C. D'Arcy; "The Foundations of Bible History," by John Garstang. In the year ending last March, the British and Foreign Bible Society distributed 11,888,286 copies of the Scriptures, in 17,000 packages waighing ten tons at a cost of over face company.

weighing 400 tons, at a cost of over £400,000.

#### THE NOBEL PRIZES.

THE Nobel Prizes are awarded from the income of a fund bequeathed to trustees by the Swedish scientist Alfred Nobel, the inventor of Swedish stellars Africa Hobel, the inventor of about 40 yranite, who died December 10, 1865, leaving a fortune of about £2.750,000. The first awards were fustributed on the fifth animoentary of Nobel's death, Dec. 10, 1907 (for awards before those recorded below see former issues of WHITAKER). The awarding authorities are the Swedish Academy of Science—(a) Physics, (b) ('hemistry'; the Stockholm Faculty of Stockholm, Sweden.

Medicine—(c) Medicine or Physiology; the Swedish Academy of Literature—(d) Litera-ture; and a commutee of five persons elected by the Norwegian Storthing—(e) Peace. The fund is managed by a Board of Directors elected by fifteen deputies appointed by the authorities above named The Swedish Government appoints a President of the Board of Directors. Particulars concerning conditions, &c., can be obtained from Nobelstiftelsens Styrelse, Sturegatan 14.

### LIST OF AWARDS (Value, 1931, Kroner 173,206).

1					
Year	(a) Physics	(b) CHEMISTRY.	(c) MIDICINE OF PHYSIOLOGY	(d) LITERATURE	(e) PRACE.

THE Exhibition of Persian Art, which was opened at Burlington House on January 7, was an experiment of which many doubted the wisdom. Of its purely artistic interest, of its attraction to those capable of appreciating the work of the great designers and craftsmen of the East there was no question. The only doubt was whether it would appeal to the public at large, and any fears on this score were dispersed during the first week of the exhibition. The attendance was extraordinary, and was maintained until the last day of the season, during which agg, oco visitors paid for admission. This number, though it did not approach the attendance of the phenomenal Italian Exhibition of 1939, easily excelled those of the Flemish and Dutch Exhibitions of 1928 and 1929, both of which were regarded as successful. The Persian Exhibition was the only one of a remarkable series in which pictures were not the predominant features. There were Persian paintings of beauty, but they were outshone by the magnificence of the carpets, to which were given most of the wall space in six or seven of the galleries. Ancient pottery and goldsmith's work were also well represented.

For the Summer Exhibition of the Royal Academy, which succeeded the Persian Exhibition at Burlington House, ro, cos works were submitted by outsiders to the judgment of the submitted by outsiders to the judgment of the Selecting Committee, by which 8,403 were rejected, 3,497 were made doubtful, and only two accepted outright The Selecting Committee was composed of the President (Sin William Llewellyn), Mr Augustus John, Mr Lee, Mr. Kelly, Sir W. Goscombe John, Bir G. G. Scott, Mr. Munnings, Mr. Russell, Mr Dodd, Mr. Turner, Sir E Cooper, and Mr. Rushbury. The Committee of Arrangement for oil namines Committee of Arrangement for oil paintings consisted of Mr. Lee, Mr. Kelly, Mr. Munnings, Mr. Russell and Mr. Dodd. The arrangement of the watercolours, drawings in black and white, and ministures, was undertaken by Mr. Dodd and Mr. Rushbury; the architecture by Sir G. G Scott, and the sculpture by Sir W. Goscombe

The principal works sold at the exhibition were: "A Road above the Valley" (£125), by Sir H Hughes Stanton; "Seen in the Mirror" were: "A Road above the Valley" (£125), by Sir H Hughes Stanton; "Seen in the Mirtor" (£250), and "Girl Combing her Hair" (£250), by Mr. Harold Knight; "East Angha" (£253), and "Early Spring in the Wye Valley" (£253), and "Early Spring in the Wye Valley" (£253), and "Girl Combing her "Cupid's Mirror" (£150), by Mr. W. G. de Glehn; "The Hostess of the White Horse" (£250), by Mr. Lampbell Taylor; "The Darlings" (£250), by Mr. James Bateman; "Amiens" (£250), by Mr. James Bateman; "Amiens" (£250), by Mr. James Bateman; "Aniens" (£250), by Mr. Terrick Williams; "Nancledra. Old Cornish Village" (£260), and "Spring Evening: the Deveron, Rothemany, Aberdeenshire" (£350), by Mr. Russell Flint; "Delphiniums by the Lake" (£350), and "Lades and Gipsies" (£350), by Mr. Melton Fisher; "The Convex Mirror" (£100), by Mr. John Colher; "The Convex Mirror" (£100), by Mr. John Colher; "The Landlord of the Chequers" (£753), by Mr. John Colher; "The Convex Mirror" (£100), and "Jane Posing" (£200), by Mr. Melton Fisher; "Closy), by Mr. Mirrhead Bone, of sporting prints is colours, and of paintings and drawings by Cannille Office of the Royal Society of Painters in Water Colours, Paintings and water-colours by the late Mrs. Latlangue, R.A. at the rooms of the Fine Art Society in New Bond Street, where a fine collection of etchings and engravings by Durer, Rembrand and other Old Masters was on view in the gallery with the same of the Rickyard (£350), by Mr. John Colher; "The Convex Mirror" (£100), by Mr. John Colher; "The Convex Mirror" (£100), and "Jane Posing" (£200), by Mr. Mirrhead Bone, of sporting prints is colours, and of paintings of Spanish scenery Mr. Stanhope A. Forbes; "Composition in Prink and Green (£300), and "Jane Posing" (£300), by Mr. Mirrhead Bone, of sporting prints is colours, and of paintings of Spanish scenery Mr. Mirrhead Bone, of sporting prints is colours, and of paintings of Spanish scenery Mr. Mirrhead Bone, of sporting prints is colours, and of paintings and drawings by Cathene All Mr. Richard Sickert. Pain

Blonds Woman "(£175), by Dod Procter: "The Footstep"(£175), by Mr. T. C. Gotch; "Chateau Gaillard"(£175) and Mr. Alfred Hayward; "Loch Grogach"(£186), by Mr. Osmund Pittman; "Through the Goblin Wood"(£180), by man: "Through the Goblin Wood" (£150, by Mr. Noel L. Nisbet; "The Maiden" (£250, by Mr. Noel L. Nisbet; "The Maiden" (£250, by Mr. William T. Wood; and "Artemis—statuette, carved wood" (£160, by Alec Miller. Pictures marked sold, but unpriced, included "Soft the sunlight in Derby Dale," by Sir David Murray; "The Estuary—gathering clouds," by Mr. Arnesby Brown; "Jane XXXI," by Mr. Gerald Kelly; and "In my Garden," by Joseph Farquinarson.
Only one work from the exhibition was bought

Only one work from the exhibition was bought Only one work from the exhibition. The Birth of for the Chantrey collection, "The Birth of Vanua—three-quarter figure, Portland stone" Venus—three-quarter figure, Portland stone" (£1,000), by Mr. William McMillan. From other (£1,000), by Air. William Realitan. From other sources were acquired "Spring Days" (£300), by Mr. Henry Tonks; "The Green Dress" (£325), and "Old Batterses Bridge" (£325), both by Walter Greaves; and a watercolour, "St. Paul's" (£325), by Mr. Henry Rushbury, Several exhibitions of great interest were held

in aid of various charities the principal of winch was organised by Sir Philip Sassoon, and illustrated the period of "The Four Goonges." It included by chance, the first and last portraits painted by Gainsborough; and many other fine works by that master, and by Reynolds, Raeburn, Romney. Lawrence, Hoppner, Cotes, and in aid of various charities the principal of which Romney, Lawrence, Horpner, Cotes, and Canaletto. This exhibition was in aid of the Royal Northern Hospital; and another, almost Royal Northern Hospital; and another, almost as important, held by Messrs Knoedler in Old Bond Street, was for the benefit of the Cheyne Hospital for Children. This was composed of English Righteenth Century portaints of Children, among which were Lawronce's famous "Master Lambton"; Romney's group "The Leveson-Gower Children"; and one of the finest achievements of Gainsborough, "The Cottage Girl with Dog and Pitcher." Girl with Dog and Pitcher."

Messrs. Agnew made a new departure at their annual exhibition of watercolours by showing the work of Turner and Girtin in the same room with that of some of the more advanced members of the modern school. At the Leicester Galleries the most important exhibition was of work by Rodin, to the catalogue of which Mr. Bernard

years.

In the auction room the year was a dull one, and there were no dispersions of collections of works there were no dispersions of collections of works of nrt of the first rank. At Christie's, the pictures sold included a portrait by Sir Joshua Reynolds of the Hon. John Infton, £1,995; two by Raeburn, £1,575 and £1,265; and three by Romney, of Lord Aucram, £1,732; of Lady Wilhelmina Emilia Kerr, £,650; and of Richard Meyler when a child, £6,885. As Sothelw's one of the most important items sold Sothely's one of the most important items sold was the famous Italian renaissance pendant known as "The Canning Jewel," and attributed to Benvenuto Cellini, and the property of the Earl of Harewood. There was only one bid for the pendant, of £10,000, at which the hammer fell. At the interesting sale of the Pepys collection, of portraits silver, and relics of all kinds which had belonged to the famous durist, his portrait by Sir Godfrey Kueller, a half length,

in New Bond Street was shown a landscape by realised £2,752. At the dispersal of the late Gainsborough, painted for the Prince of Wales Arthur Severn's collection, which moduded many in  $x_784$ , which had been lost to sight for seventy relics and former possessions of Ruskin, Turner's watercolour sketching box, and the china palette last used by him, were among the lots disposed of. The palette was given to Ruskin by Mrs. Booth, in whose house at Chelsea Turner died.

Yery few new pictures were placed on view at the National Gallery. The principal were "Judith and Holofernes," by Giovanni Lias, presented by Mr. J. W. Dollar; a still-life study by the Dutch artist, J. J. Treck, "Pewter, China and Glass"; and a "Portrait of a Lady," by Terburg, bequenthed by Sir Otto Belt. The chief acquisition at the Victoria and Albert Museum was the Howard Grace Cup, long in the nuseum was the Howard Grace Clip, long in the possession of the Howard family and sold in May for £11,000 by the Duke of Norfolk. It was purchased by Lord Wakefield, who presented it to the Museum. At the National Gallery, Millbank, the year was marked by an excellent exhibition, held in the summer, of the earlier paintings in oil by Turner.

### THE YEAR'S MUSIC.

OPERA.

Although the long-established Carl Rosa Company did not find it expedient to give the customary London midsummer season, both Covent Garden and the Lyceum Theatre, where Russian opera was performed, drew full houses. The "Itosa" was missed, for its prices sunt those whose purses do not equal their enthusiasm, while the performances have long yielded "value for money." Inciden national musical asset. Incidentally, the company is a

Covent Garden commenced its season with the usual German works, and, if no representation actually rose to the heights, the ensemble frequently afforded satisfaction to captious listeners. Easily-pleased and ignorant musiccritics often found everything perfect:—those who occasionally ventured to instruct the singers (by pointing out supposed limitations) cut an (by pointing out supposed limitations) cut an equally poor figure. Some considered the scenery inadequate, though it satisfied their betters, others belittled the orchestra—and without cause. Meanwhile, the German season (a lengthy one) always filled the house; applause was unstitled; the manager and his satellites beamed. So what else matters?

The Italian programme included the produc-

peamed. So what else matters?

The Italian programme included the production of Romani's "Fedra" and the revival of Verdi's "La Forza del Destino," an opera which had its first performance in St. Petersburg sixty-nine long years ago. The musical structure of the Verdi work resembles that of "Un New Marchen" and if the white see the second seed to be seen as the second seed of the Verdi work resembles that of "Un New Marchen" and if the seed to the verdi work resembles that of "Un New Marchen" and if the seed to be seen as the seed of the verdi work resembles that of "Un New Marchen" and the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of Ballo in Maschera," and, if the plot is of the old-time, uninteresting variety, the music contains plenty of (what singers term) "fat," the baritone air being a notable instance. Ponseile, as the ill-starred heroine, enhanced her reputation; Franci, as Carlo, often thrilled one with the power and fine quality of his voice; Pertile, who did not sing in the best Italian style, forced most upper notes, and with the usual lamentable result. It must, however, be admitted that in result. It must, nowers, he admitted that in the effective duet, "Solenne in quest ora," he refrained from bellowing each Anatural. Italy has acclaimed Pertile as "Caruso's legitimate

successor"; his musical compatriots also have rashly dubbed him "a second Tamagno." He is "Fedra" cannot possibly become a success.

Despite occasional snatches of melody, the opera makes little appeal; indeed, one is relieved to find that Romani has confined his enterprise to a couple of short acts. The role of Kelra is un-suited to Poiselle's art, though irrepressible representatives of the American colony in London, foolishly anticipating something different, caused an enounous floral wreath to the handed across the footlights at the close of the initial performance. Formichl, as Teseo, was quite wasted on so insignificant a part; Cortis, as Ippolito, was ludicrously stiff in his acting, though he sang more or less acceptably. It would be illuminating to know why the management should have ridden for a fall?

management should have ridden for a fall? The outstanding feature of the "Gianni Schicchi" performances was the excellent singing and acting of Badini, who, in buffo parts, certainly has no superior—perhaps no equal. Heddle Nasi, as Rinnuccio, displayed a voice of pleasant quality, but with the usual (and fatal) suggestion of British throatiness; he would do well to grow out of it and suights (610). well to grow out of it, and quickly. "Rigo-letto," now eighty years old, "La Bohème," "Tosca," "La Traviata," and other things which please where novelties fail (and serve them right) were included in the repertoire. Each was adequately cast.

The dignity of Covent Garden has been sadly imperilled by a collection of inferior caricatures, representing men and women mostly of very little account. These unsightly pictures are permitted to disfigure the walls of the principal

staircase. An eyesore.

Challapin, at the Lyceum, quickly outlived the bad impression which he made at Covent Garden a year or so ago, when, as Mephistopheles in "Faust," this daring Russian took liberties with both the music and the character. His tone, as in the past, again was alive with emotional colouring; the manner in which he entered into the skin of a rôle might well have been envied by all singers; he—legitimately—focussed upon himself the attention of everyone focussed upon nimeer the accention of everyone in the house. Amongst the works given were "Prince Igor," "Boris Godonnov," "Sadko," which falled to please everybody, "Roussalka," and the last act of Massenet's disappointing "Don Quichotte"—with Challapin as the demented knight. Various ballets were included heard, several of whom, if extremely venture in the scheme, the worst of them being "Petsonne, lacked that complete equipment which is

Tuska," a very poor thing.

Opera has been heard elsewhere. Martin
Shaw's "The Thorn of Avalon," in which the
composer wisely refrains from mutating other
musicians, was produced at the Crystal Palace.
Purcell's "Dido and Æneas" in all the attention
of the Trinity College Operatic Class at the New
Scala; the Royal Academy of Music pupils bried
conclusions with "Suor Angelica" and scenes
from "Roméo et Juliette," and with the usual
results. Other academical institutions also have
thought it advisable to exploit the 1 yric druna.

#### INSTRUMENTALISTS

So very bold of them.

Renata Borgatti is amongst the several plaulsts who, new to London, impressed themselves on the composeent. The artist's rare musical insight, to which she joins perfect technique, made her interpretations of Vivaldi, Scriabin, Prokoflev and Schumann memorable. Tovey, who has long been identified with nusical life in London, afforded less satisfaction: the strange trick which he played with triplets was more original than correct At one of his recitals the planist was heard in Beethoven's Variations on Bighint's "Vient Amore," a composition which takes up nearly half an hour of the listener's time. Reducing the length of a classic may be a hethous offence; but, with all respect to Beethoven and to a musician of Tovey's standing, one can have too much of a good thing, especially on a warm June afternoon For the programme also included the Variations in C minor, the six Bagatelles and the E flat, F major and C minor Sonatas The many variations, in fact, bluuted the appetite of all except Beethoven's most devoted admirers. Schnabel essily filled the Queen's Hall, and if more could have been made of the Schumann Concerto, the planist's efforts did not lack applainse—which so often is bestowed in wrong directions. Mozart's (little known) c major Concerto met with the same fate, though Schnabel's treatment of the Rondo gave pleasure. In justice to so eminent a pranist, it must be pointed out that he may have been handicapped by the instrument allotted to his use. There are pianos—and panos.

The violinists were headed by Kreisler, who, amongst other things, played Lalo's somewhat hackneyed and unequal "Symphonic Espagnole," and with much of his old form. Helfetz, in the rather unnecessary arrangement of Debussy's "L'Après-Midi d'un Faune," Bruch's "Scottish Fantasia," the ever-welcome Bach "Aria" and Ravol's "Tzigane," displayed his accustomed technical mastery Fachiri and d'Aranyi joined forces in a recital for two violins Dushkin gave so fine a performance of Tartin's difficult "Trillo del Diavolo," that a young reporter, with Harmsworth leanings, drew a fiattening comparison between the violinist in question and Paganini, writing as though Paganini, who died ninety-one year's ago, and Dushkin were contemporaries. A little knowledge is particularly dangerous where nucic is concerned.

nary dangerous where music is concerned.

Notable, too, was the appearance of Viola
Mitchell, a newcomer from America, her tone
being powerful and distinctly appealing. Liss
Simpson, a Royal Academy of Music pupil,
made au excellent impression; her future, so
far as really admirable playing is concerned,
seems assured. Many other violinists also were

heard, several of whom, if extremely venturesome, lacked that complete equipment which is so necessary to success. While pleasing easilysatisfied and, therefore, ignorant listeners, they should have remembered the "clinel amang ye takin' notes," that highear of many a performer. Truly an inconvenient presence; even an unnecessary one.

Ogan rectals abounded, the most recondite suburbs having been favoured. In some cases, however, organists failed to make effective use of the stops; not were the compositions which they played always of interest. The year's music also has included the successful appearance of various 'cellists, while Segovia's guitar rectial, which held a special interest for those who understand this instrument, drew many sympathetic amateurs to Wigmore Hall. No double bass players figured as soloists; consequently, none can tell if a second Bottesmi has anisen.

#### SANGERS

Vocal recitals have been even more numerous than in former years, amongst the most notable being Saia Fischer's concert. For this particularly well-versed artist has everything that a singer can desire, added to which she brought with her an enviable reputation from the Paris Opéra Comique. Emmi Leisner, though inclined to make nuncessar; use of the portamento, accomplished much in Brahms and Schubert. Roland Hayer's voice apparently has lost its former beauty of tone; still, he knows how to construct an interpretation, a point which is greatly in his favour. Olive Rubens is greatly to be commended for dismetring "When I am Laid in Earth"; Bernard Friedman successfully tried conclusions with Schubert's "Prometheis"; Gwenydd Gatrell, in "Care Selve" and "L'Amero," exhibited a pure tone; Jan Glenne pioved himself to be a singer of distinction Lissie de Rosen's happy thought in reviving Montevorde's "Lasciatem morire" gratified her andience; Ritter Campi sang "Ah! Lo so' as Mozart Schulde be sung, though she occasionally phrased oddly; Elizabeth Schumann's breath-control, on the other hand, was a model Eleanor Toye's choice lighted upon the Intenst songs of Attey, Camplon and others.

Amongst the younger artists special attention must be drawn to Lesley Dudley, who, as may be expected of a Herbert Oliver pupil, is a singer of very considerable merit. A well-placed voice and musical feeling are noticeable in her equipment.

#### SUNDRY MATTERS.

"Hiawatha" and "The Dream of Gerontins," from which there is no escaping, were given in London and in the provinces; Vaughan Wilhams' "Sea Symphony" and other compositions by this industrious worker have been performed in towns both near and far. Brahms' "Requiem" had the attention of the St Pani's School Choir, and with grafifying results; Cheltenham kept up its reputation with suitable programmes; Eton and Wellington did likewise. The London Promenale Concerts achieved their usual orchestral success; Hull, Bournemouth, Manchester and so forth catered for the provincials.

Francis Toye, Goossens, Holst and McEwen have faced criticism with the fruit of their learning and musicianship.

The Lordon Stage.—Definite steps to meet the and Lawrence Hanray and Mesdames North by the theatre during regs. Several of the more by the theatre during regs. Several of the more balfour and F. Marriott-Watson). June 6. A knight Passed By, by Jan Fabricius, English production and lighting, the most important version by W. A. Darlington (Messars. Nicholass innovation being the development of the revolving stage, enabling speedy changes of scene and big sets. In one successful play, Late Night Final, which came from America, four distinct scenes were built up and shown at the same time, a novelty which went some way towards rivalling the rapid transformation on the film. The most ambitious use of these new methods was made at ampittous use of these new neutritous was made at the Coliseum, which, abandoning variety, scored a great success with a German musical play, White Horse Inn. For once, Mr. Noel Coward did not occupy the leading position among dramatists, although his Cavalcade, a remarkable series of pictures of the chief events of the past thirty-two years, with but little dramatic value. but a notable patriotic appeal, promised to fill Drury Lane for many months. Chief honours fell to Mr. John Van Druten, with three arresting plays—After All, London Walland There's Aircays Juliet—in each of which he displayed a real sense of the theatre and agift for natural dialogue. sense or the theatre and a guttor natural dislogue. The Barretts of Wimpole Street, by Mr. Rudolf Beeier, ran throughout the year, and The Improper Duchess, by Mr. James B. Fagan, produced in January, looked like achieving an anniversary. Mr. Edward Khoblock had a dual success, as adapter of Vicki Baum's novel Grand Notel and the admits associated that the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the stat Hotel, and in a similar capacity with the author, Mr. J. B. Priestley, of The Good Companions. A new woman dramatist was "C. L. Anthony," whose Autumn Crocus captured the public fancy while Mr. Ashley Duke's Elizabeth of England and The Midshipmaid by Ian Hay and Stephen King-Hall were two other notable successes of the year.

In a year when change and uncertainty were interest, under the general direction of the experienced in many departments of national B.B.C.'s Manchester station; and the other life the progress of British broadcasting provided (are national Programme a reassuring record of development and achiever from Daventry. This dual service began in July, ment. The British Broadcasting Corporation, which took the place of the old British Broadpropers, at Westerglen, near Falkirk, which will which look the place of the old British Broad-casting Company, came into being on January 1, 1927, and at the close of 1921 it had thus com-pleted the first five years of its existence. Its fifth year fully maintained the standard and variety of the broadcast programmes, and a detailed survey of the year's work would touch life at almost every conceivable point.

The popularity of broadcasting was demonstrated once more by the increase in the number of wireless licences. In 1928, the year's increase was a33,318, in 1929, 328,344; in 1930, 455,174; and the first eight months of 1931 saw an increase of 433, 193, thus making it certain that the full figures for the year would show a record increase. The actual number of licences in force on August 31, 1931, was 3,844,10s, including 25,428 free licences for the blind.

The financial position of the Corporation was reviewed during the year by the May Committee reviewed during the year by the May Committee on National Expenditure, which suggested a drastic revision of the scale on which licence receipts are shared by the B.C., the Treasury and the Post Office. The Committee's proposals, which might have seriously impaired the quality of the programmes, were not adopted by the Government, but the B.B.C. made its own contribution to the general national retrenchment in the autumn. Its greated to force inaugurated in the autumn. It agreed to forgo, out of its allotted proportion of licence revenue, a sum of £50,000 for the period up to March 31, 1932, and a sum of £150,000 for the following financial year. On the assumption of a continued increase in the number of licences, £1,000,000 of wireless licence receipts will be given to public funds during the year 1933-1923, while £1,250,000 will be actually devoted to 1 rc a leasting purposes.

#### GENERAL DEVELOPMENTS.

One of the year's developments which aroused considerable interest in I ondon was the com-pletion of Broadcasting House, the new B.B.C. headquarters in Portland Place. With nine floors and three basements, and twenty studios encased in a sound-proof central tower, Broad-casting House is a far more comprehensive building than the old headquaters at Savoy Hill, which were ingeniously adapted from a block of flats, a Turkish bath and a department store. Architecturally the new building has been compared to a buttleship, and its curving structure presents a slightly bizarie but thoroughly modern appearance. The trans-ference of the B B.C. to its new headquarters began in September.

As regards the actual programmes broadcast, a much more important development was the opening of the new high-power transmitting station near Statchwate, Yorkshire, known as the North Regional Station. This was part of the B.B.C. regional scheme, which is designed to enable as many listeners as possible to obtain a service of alternative programmes. Instead of receiving one programme only from a local low-power relay station, the North of England listener can now choose between two wavelengths which are used by the new station at Slaithwaite. One of them (479 metres) sends out the North Regional programme, which contains a fair proportion of material of local

progress at Westergien, near Falkirk, which will eventually provide an alternative programme eventually provide an alternative programme possible to cover. The introduction of the new slaithwaite transmitter caused a reshuffle of the wave-lengths used in the provious, the Midland Regional transmitter being given 395 9 metres and the Glasgow transmitter 376 4 metres.

There is not much to report about the technical There is not much to report about the technical development of broadcasting itself. Television is still in its experimental stage, and those who are following its development have had the advantage of receiving frequent experimental transmissions by the Baild process. These transmissions have been generally given from the Baird studies, but on August 19 a television programme of song and dance was transmitted for the first time from a B.C. studie. The for the first time from a B.B.C. studio. The

date may have an historical value in the future. Another useful invention which has made its debut during the year is the Blattnerphone, an instrument which records sound on a magnetic steel tape and can reproduce it either immediately or at any later time. An important broadcast item can thus be preserved for future use. The first occasion on which the Blattnerphone was publicly operated by the B.B.C. was in the second general news bulletin on Derby Day, when the running commentary on the Derby was reproduced exactly as broadcast at the time of the race.

### HEARING THE WORLD.

However good and admirable the B.B.C. programmes may be, it is inevitable that the widest popular appeal is generally made by what are known as "outside broadcasts." This phrase covers the broadcasting of actual events, speeches and ceremonies, and the delivery of running commentaries on those events which cannot be broadcast; and it is through the medium of "outside broadcasts" that the listener is enabled to hear the world while sitting by his own fireside.

A prominent place among such items must be given to speeches by members of the Royal Family and leading figures of British national life. An opportunity of hearing His Majesty the King was provided in 1931 by the opening of the Ilford Hospital extension, and the Prince of Wales, whose speeches were broadcast from several dinners and ceremonies, was also heard from Buenos Aires in March, when his speech at the opening of the British Empire Exhibition was most successfully relayed across the Atlantic. A few weeks later, when he was to address a crowded Manchester meeting on the lessons of his South American tour, His Royal Highness himself requested that his speech should be broadcast; and although his request was received only a short time before the meeting a transmission was at once arranged in the North Regional programme.

Speeches by the Duke of Gloucester, Mr. Ram ay MacDonald, Mr. Stanley Baldwin and Mr. Lloyd George were relayed from various ceremonies during 1931, and a notable (if rather recondite) broadcast was that of General Smuta's presidential address to the British Association. The addresses of Lord Butherford, Senatore Marconi and others were broadcast from the Faraday Commemorative Me ting in the Queen's

Hall in September.

Two ceremonies which the B.B.C. relayed from abroad deserve special mention in this connection. One was the opening of the Vatican broadcasting station on February 22, when listeners in Great Britain and all over the world heard the voice of His Holiness the Pope; and the other was the funeral service for Marechal Joffre at Notre Dame, followed by M. Barthou's funeral oration

at the Invalides.

Listeners were also able to hear the Trooping the Colour ceremony on June 6, as well as the Aldershot and Southern Command Tattoos; while events on which running commentaries were relayed from the scene of action included were relayed from the scene of action includes the opening of the new Shieldhall dock at Glasgow by the King and Queen, the launching of II.M.S. Leander, the Schneider Trophy race, the Royal Air Force Display at Hendon, the Grand National, the Derby and the St. Leger, the Kentucky Derby (an American commentary), the Rent Leger He Wimbledon Iswn-tennis the Boat Race, the Wimbledon lawn-tennis championships, the T.T. motor and motor-cycle races, the fly weight boxing championship of Great Britain, and a large number of Rugby and Association football matches, including the F.A. Cup Final. Unfortunately there is a good deal of doubt about the future of Association football broadcasts, for the Association football authorities have adopted the theory that running ties nave adopted the theory that running commentaries are harmful to gate receipts During the summer they decided to place a ban on all commentaries, with the exception of the Cup Final, and this part of the broadcasting service is therefore in abeyance

Relays from theatres and opera houses provide another method of extending the broadcasting service outside the studio. Operatio relays in 1931 were too numerous to be men-tioned in detail, for in addition to many broadcasts from Covent Garden during the international season and the season of opera in English, there were also a large number of operatic relays from provincial theatres during the tour of the Covent Garden Opera Company, Great interest was taken in the relays of "The Barber of Seville" and "The Scoret Marriage" from the Salzburg Festival, and of "Tristan and Isolde" from Wagner's Festspielhaus in Bayreuth. This was the first occasion on which a Bayreuth performance had been broadcast, and it was well received in England. It was also broadcast throughout Europe and in the United

States.

Although the regional programmes included a number of relays from local theatres and musichalls, there were very few theatre relays (spart from opera) in the National Programme during 1933. Excerpts from the Royal Command Per-formance at the Palladium, from "Little Tommy Tucker" at Daly's Theatre, and from "Folly to be Wise" at the Piccadilly Theatre were successfully relayed, and it is to be hoped that more theatrical relays will be given in the future.

### SPEECHES AND TALKS.

Apart from those which were relayed from ontside ceremonies, the talks and speeches in the rags broadcasting programmes fell as usual into two main classes—the isolated speeches, many of which were arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks arranged in groups or series, and the formal talks are such as the formal talks are series and the formal talks are series as the formal talks are series as the formal talks are series as the series are series as the formal talks are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series are series as the series are series as the series are series as the series are series as the series are series are series as the series are series as the series are series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series as the series are series are series as the given either by a single lecturer or by a number

of different speakers. Among the isolated speeches the most important were those by Mr. Ramssy MacDonald and Mr. Philip Snowden, in connexion with the political and financial developments of the late summer and autumn. Nr. MacDonald's speech on August 25, in which he explained to the listening world his reasons for accepting the leadership of the National Government, was one of the most arresting apecches that have ever been made before a Britash microphone, and Mr Philip Snowden's explanation of the British suspension of the Gold Standard was also of the first importance Other notable addresses were those by Mr. Snowden on his two Budgets and by party leaders during

the General Election campaign
Among other isolated talks of the year should
be mentioned those by Mr. J. II. Whitley on
the report of the Royal Commission on Labour in India; Sir Josiah Stamp on "A Thousand Million Saving Certificates" (in which he stressed the importance of sving, and attacked an opposite theory broadcast by Mr. J. M. Keynes a few weeks earlier); Mr. Bernard Shaw on Joan of Arc; Mr. Gordon Cyaig on the theatre; Sir Malcolm Campbell on his speed-record achievement at Daytona Beach, Mr. J. A. Mollison on his record flight from Australia to England; Sir his record flight from Australia to England; Sir Ian Hamilton and Mr. Compton Mackenzle on Gallipoli; Mr. W. S. Paley, President of the Columbia Broadcasting Company, on the present position of American broadcasting; Sir Oliver Lodge on "A Hundred Years of Science", Sir Landon Romaid on Melba; and Senatore Marchese G. Marcont on "The Beginnings of Wireless," Oddly cnough, this was the first occasion on which Marcont had spoken into a B B.C. microphone

The ordinary mogramme of talks covered a commendably wide field, ranging from the National Lectures, in which Sir Walter Morley Fletcher gave a fascinating address on "Biology rietcher gave a fast inating address on "1900gy and Statecraft," and Sir William Bragg discussed the achievements and influence of Faraday, to the fivolous series of "Idle Thoughts," in which Mr. Deins Mackall, Lord Ponsonby, Lady Diana Cooper and others discoursed a minbly on anything that came into their heads. Of the various sories which dealt with matters of national or interwhich dealt with matters of national or inter-national importance there were two which attracted particular attention—that on "The Problem of Unemployment," which concluded with statments of the Liberal, Labour and Con-servative attitudes by Mr. B. Seebolm Rownfree, Mr Heibert Morison, and Mr. Stanley Baldwin, and that on "Russia in the Melting Pot," in and that on "Russia in the Melting Pot," in which the speakers included Mi H. R. Knickerbocker, Sir Bernaid Pares, and Mr. H. G. Welle. Another political series was that on "The Effects of Tariffs on Unemploynent," in which H. Lloyd George, Mr William Graham, and Mr. Neville Chamberlain took part, and in the autumn Mr. H. G. Wells initiated an interesting symposium on "What I would do with the World." Subjects of tented descriptions.

World."
Subjects of topical importance were "Numbering the People," in which the Registrar-General and others gave a useful introduction to the taking of the Census, and "The Treasures of Persia," which coincided with the Persian Art Exhibition at Burlington House. The literary talks included Mr. J. C. Squire's brilliant series on "The Enjoyment of Literature," Mr. T. S. Eliot's study of Dryden, Mr. Bonamy Dobree's appreciation of Defoe, and Sir Henry Newbolt's

"The Progress of English Prose"; and among the other subjects discussed were India, British Mandates, Science in the Making, Chemistry in Industry, the Health of the Worker, Marriage Past and Present, World Finance, and the Pro-gress of English Music. In a series of talks and dialogues called "The World and Ourselves," listeners were given the opportunity of learning something about life in Finland, Sweden, Bulgaria, the Netherlands, Spain, and Czecho-slovakia; and the Sunday series included Mr. E. F. Carritt's "What is Beauty?" and Dr. C. H. Dodd's " History of the Bible.

Dodd's "History of the Rible."

The concluding months of the year saw the inauguration of a new scheme of talks programme in which the talks were designed to illustrate different aspects of one man subject.—"The Changing World." The early speakers in this ambitious scheme, which was intended to cover the whole of the whiter, were Professor Arnold Plant. "How Wealth has Increased," Mr. Harold Nicolson "The New Spirit in Literature," Professor H. Levy "What is Science?" Mr. Leouard Woolf "Can Democracy Survive?" and Professor J. Doore Wilson "Learning to Live."

J. Dover Wilson "Learning to Live." Although for six days of the week the majority of the broadcast talks attained a high level of seriousness there was some relaxation on Saturday nights The earlier Saturdays of the year provided instalments of a serial detective story, provided listalments of a serial detective story, which proved to be rather poor eutertainment, in spite of the efforts of Mr. E. C. Bentley, Mrs Agatha (hriste and others. A series of dialogues on "The Ideal Hohiday" was more entertaining, and a great success was achieved by the talks on "Escape," in which escaped prisoners of war, both British and German, explained how they had outwitted their captors.

Protry which has realwars hear under the captors.

Poetry, which has perhaps been unduly neglected in the broadcast programmes, was represented by a series called "Mosaic," in which music and verse-reading were ingeniously blended; and in an Itish programme on Sep-tember 8 Mr. W. B. Yeats gave a recital of some

of his own poems.

The regular talks of the year included criticism The regular talks of the year included criticism of music (Mr. Ernest Newman), drama (Mr. James Agate), general literature (Mr. Desmond MacCarthy and Miss V. Sackville-West), fiction (Mr. Michael Sadleir, Mr. A. Duff Cooper and Miss Clemence Dane), and the cinema (Mr. Francis Birrell). Intheearlier partof the year Mr. Harold Nicolson gave a weekly talk on topical events, and Mr. Vernon Bartlett continued his invaluable weekly expositions of international affairs. affairs.

MUSIC.

It is unnecessary to refer in detail to the broadcast concerts, for the most important of these were given in public at the Queen's Hall, and they belong to the year's music rather than the year's broadcasting. The B.B.C. Symphony Orchesta is now acknowledged to be one of the Oronestia is now acknowledged to be one of the finest orchestras in Europe, and the regular broadcasts of Symphony and Promenade Con-certs provided listeners with a large number of magnificent performances, in which many new works received their first performance in Eng-land. In the earlier part of the year the conductors who were engaged for the Symphony concerts were also responsible for Sunday evening studio concerts, but this system was abandoned for the 1931-1932 series. The B.B.C. also gave concerts in connexion with the International restival of Contemporary Music, which was held

in England in 1932, and Arnold Schönberg and Manuel Falla were among the conductors of its own interesting series of Concerts of Contemporary Music. The works which received their first English performance in studio concerts included English perioriance in sound concerts induced Frederic d'Erlanger's Requiem Mass, which was performed by the B.B.C. orchestra (conducted by Adrian Boult), a section of the National Chorus, and Miriam Licette, Astra Deamond, Frank Titterton, and Keith Falkner as soloista. In addition to the important Sunday evening

concerts, which were conducted by Stravinsky, Dohanyi, Ansermet and others, the innumerable studio concerts covered a wide range of classical, modern and light music, with the apparent sim of enabling listeners to hear as much as possible of the best music of the past and the present. Although the Symphony Orohestra is divisible into various combinations for the presentation of different kinds of music, the orchestral resources of the B.B.C. were extended during the year by the formation of the B.B.C. Theatre Orchestra, which devotes itself to lighter nusical requirements; and more lowbrow tastes were still served by the Wireless Military Band and Jack Payne's B.B.C. Dance Orchestra. Among the distinguished singers and nusicians

who gave studio recitals during the year may be mentioned Pouishnoff, John Coates, Maggie Teyte, Herbert Heyner and Paul Robeson, and although most of the year's opera was relayed from outside there was an excellent studio per-formance of "Kitesh," conducted by Albert Coates. Listeners were also able to hear relays of concerts by the Halle Orchestra, the Liveror concerts by the Halle Orchestra, the Liver-pool Philiharmonic Society, the City of Birming-ham Orchestra and the Hastings Municipal Orchestra, and frequent concerts were given by the now defunct National Orchestra of Wales. The Bach Cantatas, which caused endless dis-cussion of the "Do we have too much Bach?" problem, were continued on Sundays.

The dramatic side of broadcasting has not yet been fully developed, and at present there is a wide divergence between the sims of broadcast music and those of broadcast drama. Whereas the nusical programmes of the B.B.C. are designed to include a large proportion of the best music of the past as well as modern novelties, the diamatic programmes have too many novelties or second-rate offerings and make little appeal or second-rate offerings and make little appeal to the student of English drama. Apart from a good version of "The Tempest" (with John Gielgud and Angela Baddeley) and a deplorable condensation of "King John" (which even Robert Farquiarson and Irene Vanbrugh could not render tolerable), very few plays by notable English dramatists were given in the National Programme in 1931. Among the few were Marlowe's "Edward II," Galsworthy's "The Forest," C. K. Munro's "The Rumour," Clemence Dane's "Will Shakespeare" (with Laura Cowie and John Gielgud). Lord Dunsany's "II" (with Dane's "Will Shakespeare" (with Laura Cowie and John Gielgud), Lord Dunsauys "If" (with Henry Ainley) and Clifford Bax's "Midsunmer Madness"; and other stage-plays which were broadcast included Martines Sierra's "The Romantic Young Lady" (with George Grossmith), Bruno Frank's "Twelve Thousand," E. M. Delafield's "To See Ourselves" and Ian Hay's "Tilly of Bloomsbury." No doubt there are grave difficulties in the adaptation of ordinary plays for broadcasting, but surely some doughter for broadcasting, but surely some doughtier effort could be made to acquaint listeners with

the past and present masterpieces of English drama.

The dramatic novelties of the year included a number of plays specially written for broadcasting, such as Compton Mackenze's "The Lost Cause," L. Du Garde Peach's "The Path of Glory" and "The Mary Celeste," Felix Mendelssohn's "Assault on Piofessor Weltmann" and Holt Marvell's "Across The Moon," and a larger number of adapted novels and short stories. The most successful of these were Michael Talbot's adaptation of Leonard Merrick's "Little Flower of the Wood" and Cecil Lewis's version of Joseph Conrad's "The Rescue" (with Robert (with Robert or Joseph Conrad's "The Rescue" (with Robert Loranne), R. L. Stevenson and Lloyd Osbourne's "The Wrecker," Somerset Maugham's "Mackintosh," A. E. W. Mason's "The House of the Arrow," G. K. Chesterton's "The Napoleon of Notting Hill" and "Sapper's" "Raymond Blar—Purplead", "sure black!" Drunkard," were also adapted for microphone purposes, and scenes from "Handley Cross" were broadcast under the title of "The Conquer-

ing Hero."
In addition to the drama in the National Programme the Regional Stations also presented to their own programmes. The most plays in their own programmes. The most notable were Lennox Robinson's "The Far-off Hills" and J. M. Synges "Riders to the Sea" (Belfast), Githa Sowerly's "Rutherford and Son," James R. Gregson's "Young Imeson" and Stanley Noughton's "The Younger Generation" (North Regional), Miles Malleson's "A Man of Ideas" (Midland Regional), and J. O Francis's "The Beaten Track" (West Regional)

#### LIGHT ENTERTAINMENT.

The large quantity of vaudeville programmes which were broadcast during the year enabled listeners to hear many popular stage performers, some of whom adopted entirely new styles for broadcasting purposes. Two of the most interesting recruits were the "negro" back-chat comedians, Alexander and Mose, who were later revealed as the English actors, James Carew and Mills Rose to the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of the stage of th Billy Bennett; and Jeanne de Casalis created a new microphone personality in the ramblings of a hypothetical Mrs. Feather. A series of duo-logues between Jack and Claude Hulbert were another prominent vaudeville feature, and among other contributors to the many programmes may be mentioned Cicely Courtnerage, Loslie Henson, ne mentioned ticely courtnetige, Leslie Henson, Nellie Wallace, Bert Coote, the Houston Sisters, Clifford Mollison, Anta Elson, Ella Retford, Ronald Frankau, Ernest Thesizer, Isobel Elson, Norah Blauey, Harry Tate, Chick Farr, Arthur Prince, Wish Wynne and Melville Gideon, as well as such established broadcasters as Clapham and Dwyer, Mr. Flotsam and Mr. Jetsam, Tonmy Handley, Mabel Constanduros and Michael Hogan, Gillie Potter, Ann Penn, Stamless Stephen, nogan, Gilizabeth Pollock, Paul England, Pat Paterson and Enid Trevor. Performances by Sir Harry Lauder, Richard Tauber, Jeanette Macdonald and Nikita Balieff's Chauve-Souris were also given during the year, though they did not actually figure in the vandeville programmes.

While the average vaudeville programme had much in common with the work of the modern music-hall there were some pleasant experiments in the presentation of more sophisticated programmes, which were more skin to the original Continental cabaret than to any form of enter-tainment known in England. These programmes, tainment known in England. These programmes, which included such items as Lady Gregory's was under the auspices of the Central Council for "The Gaol Gate," a poetical guessing-game con-

ducted by Lady Tree, Elsa Lanchester's burlesque renderings of old songs, a musical setting of some of "The Bab Ballads" and a reading of some of his own verses by Captain Harry Graham, were obviously designed to make quite a different appeal from that of the ordinary B.B.C. vaude-ville; and the experiment is one which should certainly be continued.

Musical comedy and revue also figured in the B.B.C. programmes. The most important of the musical comedy productions was Gordon the musical comedy productions was corton McConnel's adaptation of the Continental musical comedy "Evelyn," which was presented under the title of "Rich Girl, Poor Girl," with Phyllis Neilson-Terry in the principal rôle. It was the first time that this production had been heard in England, and although it turned out to be quite a modest affair it showed a commendable enterprise on the part of the B.B.C. Other musical comedes broadcast were "The Consin from Nowhere," "The Gypsy Princess," and C. Denis Freeman's "The King can do no Wrong."

There was a plentif". supply of revues, ranging from the billion "Durantie". Bulleaut "Religional Constanting Company of the Constanting Company of the Constanting Company of the Constanting Company of the Constanting Company of the Constanting Company of the Constanting Company of the Constanting Company of the Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Constanting Co

from the bulliant "Pursuit of Pleasme" to Philip Ridgeway's depressing "Ridgeway Parades"
"The Pursuit of Pleasure," for which Lance
Steveking and Harold Scott were jointly responsible, was a delightful reconstruction of the various forms of popular entertainment of the 18th, 19th and 20th centuries, and it was certainly one of the best pieces of broadcast entertainment during 1931. In the latter half of the year Archie De Bear made a welcome appearance as a producer of microphone revues, and his "Listeners (which he wrote in conjunction with Reginald At kell) and "Crikey" (in which Robert Hale, Minn Crawford, Enid Stamp-Taylor, Auona Winn and others recalled some successful items from his own theatrical productions) showed that a gifted producer of stage revues can be a useful gifted producer of stage review can be a useful asset to broadcasting. Among other revues were Gordon McConnel's annusing "More Airy Nothings" and "A Plocadilly Dally," C Denis Freeman's "From Montmatte to Montpariasse" and "A Seat in Hyde Park," Graham Squiers' "B.B.C.—B.C., "Eniest Longstaffe's "Kiver Side-Lights," John Watt's delightful "Stop Press" and rather thesome "Au Lapin Qui Saute," McConnel and Watt's "Theatnescope," and L. Du Garde Peach's "Our Town"

The agreeably funtation unductions of E. J.

The agreeably fantastic productions of E. J. King-Bull, such as "Precession," "The Decadence of Terpsichore" and "Yes and Back Again," defy classification, as being not exactly drama and not exactly revue, but they made a distinct appeal to more sophisticated listeners.

### EDUCATION AND RELIGION.

The furtherance of adult eduration by means of cultural and educational talks is one of the acknowledged objects of the BBC, and in recent years a great impetus has been given to this work by the formation of discussion groups, which meet to hear the talks and discuss the subjects In the autumn and winter of 1930-1931 more than a thousand of these groups were formed, and two important conferences were organised in this connection in 1931. The first, which was held in London in January, was a which was need in Johnson in an author, was an atudent listeners; and the second, which took place at Oxford in June, was a summer school for the

also discussed at an international conference in Vienna in August, when Sir John Reith, the Director-General of the B.B.C., was present. A great deal of work was also done with regard

to broadcasts to schools. The Central Council for School Broadcasting, which is under the chairmanship of Mr. H. A. L. Fisher, and is composed of representative teachers and others engaged in educational work, entered its third engaged in educational work, entered its third year of office in 1931, and it continued its task of arranging broadcast lessons which could be used by schools to supplement the ordinary class teaching. The subjects for 1931 comprised world history, nature study, biology and hygiene, music, English, French, German, geography, rural science and speech training; and among the speakers were Mr. A. Lloyd James, Sir Walford Davies, M. E. M. Stephan, Miss Rhoda Power, Mr. Frank Roscoe, Mr. Harold Nicolson, Mr. Gerald Heard, Mr. S. P. B. Mais, Mr. Eric Parker and Professor Winifred Cullis. Winifred Cullis.

The attitude of the Church of England towards broadcasting was discussed at the Convocation of Canterbury in January, when the Joint Com-mittee on the Religious Value of Broadcast Services placed on record its "grateful appreciation of the debt which was owed to the British Broadcasting Corporation for its determination that religion should be given its due and proper place in its programme as a whole." In addition pusce in its programme as a whole." In addition to the morning studio service and the Sunday evening services, which were relayed from places of worship all over the country (the various denominations being represented in turn), a series of short Thursday evening services was begun in October. These services, which were initiated as being appropriate to the national emergency, were taken from St. Michael a Chaefer emergency, were taken from St. Michael s, Chester Square, London.

During the year an important change was made in the membership of the B.B.C.'s Religious Advisory Committee, with the result that three leading Nonconformist bodies are now directly represented on the Committee. Members of the Regional Advisory Committee were also incorporated in the central body, which has thus been provided with greater variety of membership and brought into closer touch with the provinces.

MISCELLANEOUS The deaths of Sir William Bull, Sir Laming Worthington-Evans and Mr. Vernon Hartshorn during 1931 robbed the B.B.C. of three men who were closely connected with the carly struggles of British Broadcasting. Sir William Bull was Vice-Chairman of the old British Broadcasting supreme broadcast story-teller.

Company, whose functions were taken over by the present Corporation in 1936; Sir Laming Worthington-Evans, while holding office as Post-master-General, was largely responsible for the efficient development of the licensing system; and Mr. Vernon Hartshorn, who was Postmaster-

and Mr. Vernon Hartsnorn, who was resumasted eneral in 1923-1924, first authorised the broadcasting of controversial political speeches.

Although the conduct of the B.B.C. does not often engage the attention of Parliament, an important debate on the Corporation's policy took place in the House of Lords in March, when the Parliam who was the result of the whitery was the Earl of Radnor, who raised the subject, suggested that the B.B.C. programmes seemed to indicate a tendency to try to educate the people of Great Britain towards Socialism, and even towards Communism. He was answered by Lord Gainford, Vice-Chairman of the B.B.C., and Lord Crawford, Lord Astor and Lord Poissonby also defended the Corporation against the charge of political bias. Lord Radnor eventually with-drew his motion, with the admission that the general opinion appeared to be that the B.B.C. could not be better.

Sir John Reith, the Director-General of the B.B C., paid a visit to the United States in 1931, in the course of which he gave an address in New York to the National Advisory Council on Radio in Education.

At the general assembly of the International Broadcasting Union, held at Lausanne in June, Vice-Admiral C. D. Carpenda'e, the Controller of the B.B.C., was re-elected President for 1931-1932

A newspaper ballot which was held in 1931 gave vaudeville, dance music, and news as the three most popular items in the b.B.C. programmes.

A survey of European wireless licences at the end of 1930 showed that Great Britain occupied third place, with regard to the relation of the number of its receiving sets to the total population Denmark was first and Sweden second.

In the later months of the year a rearrangement of programme timing was accompanied by an extension of the time devoted to bulletins for farmers.

A programme item called "Crisis in Spain" was the first British attempt to give a broadcast impression of a recent political event. Though the innovation was not entirely successful, its further developments should prove interesting.

Mr. A. J. Alan's infrequent appearances before the microphone enhanced his reputation as the

The text of the Abnormal Importations (Customs Duties) Bill was issued on November 17, 1931. The measure was backed by Mr. Runciman (Chancellor of the Exchequer), Major Elliott (Financial Secretary to the Treasury), Major Hore-Belisha (Parliamentary Secretary, Board of Trade), and Sir Thomas Inskip (Solicitor-General). It consists of seven clauses as follows:—

- I.—(x) If the Board of Trade are satisfied that articles of any class or description comprised in Class III. of the Import and Export List issued under the authority of the Treasury and the Commissioners of Customs and Excise for the year 1931 are being imported into the United Kingdom in abnormal quantities, it shall be lawful for the Board, with the concurrence of the Treasury, by Order to apply this Act to articles of that class or description.
- (a) An Order made under this section shall be laid before the Commons House of Parliament so soon as may be after it is made, and shall cease to have effect on the expiration of a period of as days from the date upon which it was made unless at some time before the expiration of that period it has been approved by a resolution passed by that Mouse.—
- Provided that in teckoning any such period of a8 days, as aforesaid, no account shall be taken of any time during which Parliament is dissolved or protogned or during which the Commons House is adjourned for more than four days.
- (3) An Order so made may be varied or revoked by a subsequent Order made in the like manner and subject to the like provisions
- II—(z) Subject to the provisions of this Act, there shall, on the importation into the United Kingdom of articles of any class or description to which, by virtue of an Order made under the last preceding section, this Act for the time being applies, be charged thereon such duties of Customs as may be specified in the Order not exceeding 100 per cent. of the value of the articles.
- (a) No articles which are Empire products within the meaning of that expression as used in sub-section (x) of section 8 of the Finance Act, 1919, shall be chargeable with duty under this Act
- (3) Any duty chargeable under this Act on any article shall be charged in addition to any other duties of Customs chargeable on that article.
- III.—(1) The value of any imported articles for the purposes of this Act shall be taken to be the price which an importer would give for the articles if the articles were delivered to him freight and insurance paid, in bond at the port of importation, and duty shall be paid on that value as fixed by the Commissioners of Customs and Excise.
- (a) The Commissioners of Customs and Excise may make regulations for the purpose of giving effect to the provisions of this section and in particular for requiring any person con-

- cerned with the importation of articles into the United Kingdom to furnish to the Commissioners in such form as they may require such information as is in their opinion necessary for a proper valuation of the articles, and to produce any books of account or other documents of whatever nature relating to the purchase, importation, or re-sale of the articles by that person
- (3) If any person contravenes or fails to comply with any regulations made under this section he shall in respect of each offence be hable to a customs penalty of £50.

#### I\ .-If-

- (a) any dispute arises whether any articles imported into the United Kingdom are articles specified in an Order made under this Act, on
- (b) in accertaining the proper rate of duty chargeable on any articles under this Act, any dispute arises as to the value of the articles;

the question shall be referred to the arbitration of a referce appointed by the Lord Chancellor, who shall not be an official of any Government department, and the decision of the referee with respect to the matter in dispute shall be final and conclusive, and sections thirty and thirty-one of the Customs Consolidation Act, 1876, shall apply as if the dispute were such a dispute as is referred to in the said sections thirty, with the substitution of the application for a reference to a referee under this section for the action or suit mentioned in those sections.

- V—Subject to compliance with such conditions as to the security for the re-exportation of the articles as the Commissioners of Customs and Eccise may impose, this Art shall not apply to articles imported for exportation after transit through the United Kingdom or by way of trans-shipment.
- VI —Anything anthorised under this Act to be done by the Board of Trade may be done by the President of the Board, or, in his absence, by a Secretary of State.
- VII.—(z) This Act may be cited as the Abnormal Importations (Customs Duties) Act, 1931.
- (a) In this Act the expression "the United Kingdom" does not include the Isle of Man.
- (3) This Act shall continue m force for a period of six months and no longer.

### L'ACADÉMIE FRANÇAISE.

THE FRENCH ACADEMY is composed of 40 members, elected for life, and is the highest of the five Academies constituting l'Institut de France (Secretary of the Institute, M. Robert Regnier). The Academy was founded by Cardmal Richelieu in 1635 and re-organized in 1816. The special object of the Academy is the composition of a Historical Dictionary of the French Language, and its members, "The Forty Immortals," are as follows:—

# The School

### Malvern Link

H. PAULLEY, M.A. (Natural Science Exhibitioner, St.John's College, Cambridge)

R. C. LOTT, M.A. Trinity College, Oxford.

BOYS PREPARED FOR PUBLIC SCHOOLS AND NAVY.

House faces south, with large Playground, Carpenter's Shop, Fives Court, Boys' Gardens, Swimming Bath, adjoining house.

Special features of the building are large handsome dining hall, bright lofty bedrooms, and large classrooms. Small classes.

Excellent Cricket Field of 4 acres.

Entire charge taken of Children whose Parents are abroad.

# Tannachie Court School

Malvern Wells, Worcestershire.

MR. KEITH BREBNER BULLEN, M.A. (Hons.), Caius College, Cambridge,

Assisted by a qualified Staff, prepares boys, aged 7 to 14 years, for Public Schools and the Royal Navy.

Tannachie Court School, with 16 acres of Playing Fields and Gardens, is situated on a slope sheltered by the Malvern Hills and enjoys a bracing and sunny climate.

The aim of the School is to develop each boy according to his individual ability, and by method and enthusiasm to ensure a sound preparation

for later work.

Classes are small, and the backward boy is given extra help and

encouragement.

The domestic arrangements are under the direct supervision of Mrs. Bullen, who is assisted by a trained nurse as Matron. Entire charge can be taken of children whose parents are abroad.

All the vegetables are grown in the gardens, and fruit is abundant. The School has its own little farmyard, with poultry and pigs; a model dairy is to be installed later. Healthy appetites are encouraged, the food being varied and attractively served. Special attention is paid to young and delicate children.

Prospectus on application.

#### Mistley Place Mistley, Essex

PREPARATORY SCHOOL FOR BOYS.

Head Master—
E. M. JACKSON, M.A. (Cautab, Classical Tripos).

Premises—Stand in park-like grounds of about 30 acres. Gravel soil. Gymnasium.

Curriculum—Arranged to meet the requirements of Common Entrance Examination, Preparation for Scholarships, and entrance to the Royal Naval College, Dartmouth. Numerous successes.

Miniature Rifle Range, Boxing, Swimming, Salt Water Bathing, Swedish Drill.

Fees-£105 to £120 per annum.

#### Newton College Newton Abbot, South Devon

Head Master— H. PALLOT, B.Sc. (Lond.)

Public School preparing for Navy, Army, Universities and Professional and Business Careers. Special Coaching if required. Many successes in Woolwich, Sandhurst and Navy Eutrance Examinations.

School Buildings include School House, Chapel, Library, Laboratory, Gymnasium, Sanatorium, Swimming Bath, Fives and Racquets Courts.

Both Day Boys and Boarders are admitted to the Preparatory School attached to the College. The College has also an efficient O.T.C.

Excellent Playing Fields. Rugby Football is played in the Autumn and Hockey in the Spring Term.

# Oswestry School

Oswestry, Salop.

Founded 1407.

WORCESTERSHIRE. U.D.C. rso miles from London.
Pop. rs.63s. Means of Access—G.W. Railway and L.M. & 8.
Railway. Location—On the slopes of the Malvern Hills,
water Supply—Pure, constant Drainage—Modern. Soil—Gravel. Season—Summer and winter.
Annual Fixtures—Shakespeare Week in May: Croquet and Lawn Tennis tournaments in May and
June. Malvern is an inland watering-place important educational centre, and a pretty
residential town, consisting mostly of villas standing in own grounds. The highest point of the
Malvern Hills is the Worcestershire Beacon, r.4co feet high, from the summit of which is obtained
one of the most extensive panoramic views in Great Britain, embracing the Severn and Wye
Valleys, the Cotawold, Mendip and Welsh hills; and in the plain below can be seen Droitwick,
Worcester, Evesham, Cheltenham, Gloucestor and the Bristol Channel.

The Malvern Hills being a single chain, there are no lateral intervening valleys in the range.
This has much to do with the dryness of the climate. The Malvern district is rich in botanies,
geological, entomological and ornithological specimens. Assembly rooms (high-class bands and
theatrical companies), public library, three clubs, tennis, bowls, croquet, golf—gentlemen's course
(38 holes), ladies' course (9 holes)—hunting, boating, fishing. Places of Interest—Rivers Seven
church. Tewkesbury Abbey (15 m.). Porshore Abbey (16 m.). Bosbury (8 m.)—Edna Lyan's
tomb. Valley of the Wye—by rail to Liss, and boat down river to Chepstow.

MOUSE AND ESTATE AGENTS.—Particulars of Residences and Building Land to be Let 🐟 Sold in this delightful District, may be had on application to-

Telephone, 160.

Established 1863.

# WORTHING

is noted for the equability of its climate, which is largely due to its geographical situation. The proximity of the sea and the shelter

afforded by the South Downs combine to modify the climate and avoid extremes. The absence of hills enables convalescents to take exercise without exertion, and so

derive the greatest benefit from the high percentage of ozone in the air and the large amount of sunshine. A palabal Pavilion at the Pier entitude and a commodious Bandstand Enclosure on the Pariade have been added to the town's many attractions. An all-the-year orchestra plays in the Pavilion—There are facilities for sports of all kinds

EXPRESS SERVICE (PULLMAN CARS) to LONDON, 79 minutes.

The Ideal Residential Town 'twixt Sea and Downs. Unsurpassed for Sunshine and Equability of Climate.

A copy of the latest Official Guide and Register of Hotels, etc., will be forwarded on application to the Town Clerk, No. 16, Municipal Offices, Worthing, Sussky,

ASSETS EXCEED £14,000,000

# Provision for Death Duties

The following are examples of reduced rates of premium for ordinary whole-life non-profit policies of £1,000:—

Age next	Annual	Age next	Anrual
Birthday	Premium	Birthday	Premium
25 30 35 40	£ s. d. 13 18 4 15 16 8 18 9 2 21 17 6	45 50 55 60	£ s. d. 26 9 2 32 13 4 41 5 0 52 19 2

For policies of £5,000 and upwards a reduction of  $2\frac{1}{2}$  per cent. on the premium is allowed.

The sums assured may be paid wholly or partially to the Commissioners of Inland Revenue on account of death duties before the grant of probate, an arrangement which avoids the interest on the duties.

Write for the new Leaflet "Provision for Death Duties by Whole Life Assurances at Minimum Rates" to the Manager:

#### Brincipal Charitable Bequests of the Year. cxlii

APPENDED is a list of the principal bequests for charitable purposes recorded during the year. The amount for charitable purposes is, in a considerable proportion of the cases, approximate, owing to the bequests including a share of the residuary estate, or consisting wholly, or in part, of business interests, or of blocks of shares for which a definite value cannot be given.

owing to the bequests including a share of the residuary estate, or consisting wholly, or in part, of business interests, or of blocks of shares for which a definite value cannot be given.

Reversionary bequests, where these are absolute (usually on the cessor of life interests or a period of years) are included, but contingent reversions (dependent upon failure of issue, the failure of prior trusts or the failure to observe certain conditions, &c.) are not included, unless it is known the reversion, though nominally contingent, is, in the events which have happened, absolute. The amounts of residuary bequests are subject to variation on the final winding-up of the estate, owing possibly to variations in the amount of duty payable, as the final figures may place an estate for duty purposes in a different category (either higher or lower) as compared with the original value submitted on obtaining the grant of probate.

The list records the principal bequests published during the year, not necessarily those becoming payable during the year.

The fount of charity shows no signs of serious abatement in volume, notwithstanding the recent general decline in values and the increasingly large amounts to which both the income and the capital of the well-to-do are subjected in taxation. There is a notable loss due to this cause, but this appears to have been partly compensated for by an increasing number of bequests from estates not in the largest category.

The proportion of the bequests for educational trusts, for hospitals, and for "social purposes" continues to show a steady increase, while the decline in bequests for purely religious and sectarian purposes is more marked, although this year there have been several large bequests to the Bristol Diocessan Board of Finance and for Jewish and Roman Catholic charities.

The largest single bequest—of an approximate value of £700,000—recorded during the year is not included in the table, as the grant of probate was subsequently revoked, and as the disposition of the proper

\$7 10s. 0d. will keep the Homes and Training Ship for one hour.

Please send a gift to help the Society in this great work of caring for, and providing for, these young ones.

164, SHAFTESBURY AVENUE, LONDON, W.C. 2

Haverstock Hill. LONDON, N.W. S.

Founded 1758.

Patrons: Their Majesties The King and Queen. President: H.R.H. The Prince of Wales, K.G. Treasurer (since 1897): The Rt. Hon. Lord Marshall, P.C., K.C.V.O.

The Orphanage is unsectarian, and helps fatherless and other necessitous children from all parts of the country and the Dominions, without restriction as to chitten from an parts of the country and the Dominions, without restriction as to class or creed. Boys and girls are admitted at all ages between infancy and 11 years of age, and are cared for until 15. Their education fits them for useful positions in after-life. Opportunities occur for suitable children to have a secondary education; same boys are relected for training as Officers of the Mercantile Marine. During the past 173 years over 7,500 have been received; 370 are now resident, and others await vacancies.

More annual subscribers are needed. Out of £17,000 required annually only £7,000 are assured. The balance must be raised by donations. Legacies are a useful means of helping. Please include the School in your Will. Annual Report sent on request, and the School may be visited by interested friends.

Forms of application for the admission of children and all needful information may be had of the SECRETARY, FRED. J. ROBINSON, A.C.I.S., 34-40, LUDGATE HILL, LONDON, E.C. 4.

#### Miss Smallwood's

Society for the Assistance of Ladies in Reduced Circumstances (UNDER ROYAL PATRONAGE)

#### AN URGENT APPEAL

"Their works do follow them"

There are many people who, alsa, cannot give to this Society during their lifetime, but we shall be glad if they will remember that a Legacy, large or small, will be very useful and gratefully received. The need of permanent help is greater than ever—also New Annual Subscriptions will be thankfully received.

Please make cheques payable to— Miss Smallwood's Society, Lancaster House, Malvern

MORE IN THE BRITISH EMPIRE THAN IN ANY WE ARE FIGHTING LEPROSY WITH THED HANDS.

Will you help to Free them?

Money is needed to control the world's worst scourge. Grants to governments, missionaries and others engaged in the fight, exceeding £18,000, have already been given. Much more is needed if the Empire's million sufferers are to be adequately helped.

Donations, however small, will be gratefully received by the Hon. Treasurer, SIR FRANK CARTER, C.LE.

The British Empire Leprosy Relief Association 29, DORSET SQUARE, LONDON, N.W.1.

# Why we need LEGACIES and BEQUESTS

THE need of ex-Sarvicemen, including the disabled, and their dependants, and the care of those left behind by men who fell in action, are an ever-present and recurring charge on the Legion. Its work in these directions is dependent upon the sale of Popples—a slender support for so great a work hat must go on indefinitely. Every year since the inception of the Fund the expenditure has two reases, and it is vitally necessary that the Fund should be strengthened and fortified against any possible diminution of income in the future by means of Legacies and Bequests.

### EARL HAIG'S BRITISH LEGION APPEAL FUND

Full particulars and Forms of Bequest can be obtained from the Organising Scoretary, Capt. W. G. WILLCOX, M.B.E., Haig House, 26, Eccleston Square, London, S.W. 1.

# The Cry of the SICK CHILD

HELP is desperately meeded by Dockland's very poor sick little ones are being cared for by the East London Hospital for Children. Many thousands of little lives have been re-made. To-day the Hospital is in desperate need. Will you help relieve the strain? Donations gratefully received by Secretary, Shadwell, London, E.

## FAST INNOON HOSPITAL & CHILDREN

York Road, Lambeth, S.E.1.

ESTABLISHED 1765.

Patron-H.M. The Oueen.

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom, but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer, or Miss Lilly Hearn, the Secretary, at the Hospital.

### The IFE RRIGADE

Seeks to develop Christian character and to inculcate useful habits for life's struggle. FIVE GREAT AIMS:

To awaken in girls a sense of their responsibility in life.
To help them to make the best of their powers of body and mind.
To train them to be self-reliant, useful women.
To influence them to dedicate all their powers to the Service of God.
To keep them in touch with the Church and Sunday School during those years when they often become lost to both.

FOUR-FOLD PROGRAMME: Spiritual, Physical, Educational, Social, Write for full information (gratis) to :-

Headquarters' Secretary, 56, Old Bailey, London, E.C. 4.

#### THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON).

Patron-THE KING. Vice-Patron-H.M. THE QUEEN.

Chairman Executive Committee-H.R.H. THE DUKE OF YORK, K.G.
THE HOME IS SITUATED AT WEST END, WOKING, between BAGSHOT and BISLEY.

THE HOME IS SITUATED AT WEST END, WOKING, between BAGSHOT and BISLEY.

The Home is constructed to accommodate 250 Boys, chosen from the necessifical classes between the ages of about 14 and 151, and give them a training, up to the age of 17 or thereadouts, which will it them allie for civil life in this country or its 000cmies, and for service in the Army, Navy, Air-Force or Mercantile Marine.

Countrious or Abstracts in the Army or Navy, and the 16 to 15 years. 2. A boy must, in the opinion of the Committee, be really necessitious. 2. He must be free from such physical or mental infirmity as would disqualify him forearries in the Army or Navy, or for dril employment in the Colonies or elsewhere, which were also as the product for the Colonies or elsewhere, which were the conditions of given to such number of boy now hold one can be revealed for out of the general income of the Home. A guaranteed payment of 252 annually during his stay at the Home will give a right of nonzination for a lad fulfilling the conditions of admission. Subscriptions and Donations are surposity needed in order that the above sumber of boys may be mediatured.

Subscriptions are received by The Westmanners Bars, Lainten, 1, 8t. James's Square, S.W., and by the Commandant at the Home, from whom any further information can be obtained. For financial reasons the London Office has been abolished.

COMMANDANT:-LIKUT-COLONKL H. C. HERBERT, O.B.M.

### HOSPITAL

70-71. BLACKFRIARS ROAD, S.E. Telephone: Hop. 1021.

ESTABLISHED 1841.

Treasurer-The Rt. Hox. The Lord Morris, P.C., K.C.M.G.

This Hospital, established in 1841, was the first and for many years the only one of its kind, established in the United Kindom. Donations and Subscriptions are urgently desired in order to re-open its beds for In-patients. Since its foundation no less than 600,000 patients have been treated, and the scientific equipment of the Institution has always been kept thoroughly abresst of modern developments in research and treatment. The Light Department is provided with X-rays, radium and ultra-violet light apparatus. It is a centre both of dermatological therapeutics and education, and welcomes at its clinics medical practitioners and students. Patients should attend daily at 1.80 p.m., or on Fridays at 6 p.m. They are expected to contribute to the funds of the hospital according to their means and position.

## **OSPITAL**

### LONDON BRIDGE, S.E. 1. URGENTLY NEEDS HELP.

President: H.R.H. THE PRINCE OF WALES, K.G.

Founded in 1725 by Thomas Guy, a Bookseller and Publisher in the City of London, Incorporated and Governed by Acts of Parliament, 11th George 1st, ch. xii., and 61st Victoria, ch. xi., as "The President and Governors of the Hospital founded at the sole costs and

od. V., as "The Frestent and Governors of the Mospital section of the Mospital is empowered to receive gifts of, and to hold, land up to an aggregate yearly galled of Sixty Thousand Founds (exclusive of the site of the Hospital), notwithstanding the provisions of the Mortmain Acts.

IN-PATIENTS (1986) . 12.249

OUT-PATIENTS (1980) 123.971

Expenditure: £191,494 :: :: Income from Endowments: £67.641

The Governors earnestly appeal for further Subscriptions and Donations. The present Subscription List is only about 26,000 a year, although the Charity is dependent upon support from sources other than its endowments to the extent of over £120,000 aye annum. To form a permanent Memorial, if desired, a Donation or Bequest should be allocated to the Re-endowment Fund, which is permanently invested and the income only applied for the general purposes of the Hospital.

A Gift of £1,000 to this Fund, or an Annual Subscription of £50, will respectively endow or support a Bed, over which a brass tablet, inscribed in accordance with the wishes of the Benefactor, can be placed.

A copy of the Annual Report of the Hospital can be obtained on application to Mr. W. J. Curry, Clerk to the Governors, Guy's Hospital, S.E. 1. Telephone: Hop 1086.

Bankers: THE BANK OF ENGLAND. Treasurer: F. P. WHITBREAD, Esq.

## Imperial Cancer Research Fund.

Patron-HIS MOST GRACIOUS MAJESTY THE KING. President-His Grace the Duke of Bedford. Hon. Treasurer—Sir George Makins, G.C.M.G., C.B. Director—Dr. J. A. Murray, F.R.S.

The object of the Research is for the good, not only of the whole British Empire but of the whole world. The scope of the work embraces detailed investigation of Cancer is every part of the Empire as it occurs in the human race and in the vertebrate animal tingdom. Our recent researches have undoubtedly advanced our knowledge of Cancer, and it is not too much to hope that the further prosecution of the investigations will ultimately yield results of the greatest importance on the nature and treatment

Donations and Subscriptions may be sent to the Hon. Treasurer, Imperial Cancer Research Fund, 8, Queen Square, London, W.C. 1, or may be paid to the Westminster Bank, Marylebone Branch, 1, Stratford Place, London, W. 1, A/c, Imperial Cancer Research Fund.

#### FORM OF BEQUEST.

I hereby bequeath the sum of £ to the Treasurer of the Imperial Cancer Research Fund under the direction of the Royal College of Physicians of London with the Royal College of Surgeons of England for the purpose of Scientific Research, and I direct that his receipt shall be a good discharge for such legacy.
